These reporting concepts are identical with those used in compiling monthly and annual production data for specified chemicals which appear in the Census publication Facts for Industry Series M19A, Inorganic Chemicals and Gases. The Census monthly series were initiated in January 1941 and for the years 1941 through 1953 have been summarized in the following publications: Inorganic Chemicals, United States Production: 1931-1946, Facts for Industry Series M19-Supplement; Inorganic Chemicals, Facts for Industry Series M19A-07, M19A-09, M19A-00, M19A-01, M19A-02, and M19A-03. The Census of Manufactures data differ from those appearing in the Facts for Industry Series and the Bureau of Mines Publications because of minor reporting differences and because the monthly series include data from the Tennessee Valley Authority.

In 1939 and earlier Census of Manufactures surveys the classification of the inorganic chemicals, except acids, chlorine and alkalies, was generally based on the acid radical, whereas the classification system employed since then is according to the metallic (basic) element. These different arrangements restrict the comparison of the more recent data with the commodity statistics for 1939 and earlier years.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments classified in other industries.

Table 1.—GENERAL STATISTICS FOR THE UNITED STATES: 1954 AND EARLIER YEARS

(For explanation of column captions see Introduction)

Industry and census year	Establishments, number	All employees		Production workers		Value added by manufacture <sup>2</sup> (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments <sup>3</sup> (\$1,000)

\* Revised

NA Not available.

<sup>1</sup>For the period 1949-1954, figures are based on employment for the payroll periods ended nearest the 15th of March, May, August and November. For 1947, they represent the average of 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the figure for all employees represents the sum of the annual average number of production workers and the number of nonproduction workers reported for one payroll period (usually in October).

<sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. See Introduction, "Value Added by Manufacture."

<sup>3</sup>For 1947-1954, value of shipments; for 1939, value of production. See Introduction, "Value of Shipments."

<sup>4</sup>Not shown because these figures contain unknown and varying amounts of duplication and receipts for contract work.

<sup>5</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period.

<sup>6</sup>Estimates with a standard error in excess of 15 percent generally have been omitted from this table.

<sup>7</sup>No comparable figures are available for earlier years.

<sup>8</sup>Includes data for Government-owned plants operated by private firms for the account of the Federal Government.

Note: Detailed figures may not add to the totals because of independent rounding.

<sup>D</sup> Withheld to avoid disclosing figures for individual companies.<sup>1</sup> General statistics for some producing States are not shown separately in the table (See INTRODUCTION "Confidentiality of Data for Individual Companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1954:

S.I.C. 281, Industrial Inorganic Chemicals: New England—New Hampshire, 2 (100-249); Rhode Island, 6 (100-249); Connecticut, 3 (20-99); East North Central—Wisconsin, 9 (20-99); West North Central—Minnesota, 4 (250-499); Iowa, 4 (250-499); South Dakota, 1 (1-19); South Atlantic—Delaware, 2 (500-999); District of Columbia, 1 (1-19); North Carolina, 5 (20-99); South Carolina, 3 (Over 10,000); East South Central—Tennessee, 13 (Over 10,000); Mississippi, 4 (250-499); Mountain—Montana, 2 (250-499); Idaho, 3 (500-999); New Mexico, 2 (5,000-9,999); Arizona, 1 (1-19); Nevada, 2 (500-999).

S.I.C. 2811, Sulphuric Acid: Middle Atlantic—New York, 1 (100-249); New Jersey, 2 (100-249); Pennsylvania, 3 (250-499); North Central—Ohio, 4 (100-249); Indiana, 2 (20-99); Michigan, 3 (20-99); Iowa, 1 (20-99); Kansas, 1 (1-19); South—Maryland, 1 (500-999); Virginia, 3 (100-249); West Virginia, 1 (20-99); Kentucky, 1 (1-19); Tennessee, 1 (250-499); Alabama, 2 (20-99); Louisiana, 2 (100-249); Oklahoma, 1 (20-99); Texas, 4 (250-499); West—Montana, 1 (100-249); Colorado, 1 (20-99); Utah, 1 (20-99); California, 5 (500-999).

S.I.C. 2812, Alkalies and Chlorine: Northeast—New Hampshire, 1 (100-249); Rhode Island, 1 (20-99); New York, 3 (2,500-4,999); North Central—Ohio, 2 (2,500-4,999); Michigan, 3 (4,412); Kansas, 1 (100-249); South—Maryland, 1 (20-99); Virginia, 1 (1,000-2,499); West Virginia, 3 (2,314); Tennessee, 1 (100-249); Alabama, 2 (100-249); Arkansas, 1 (20-99); Louisiana, 2 (1,000-2,499); Texas, 2 (1,000-2,499); West—Nevada, 1 (250-499); Washington, 2 (250-499); Oregon, 1 (100-249); California, 1 (500-999).

S.I.C. 2819, Inorganic Chemicals, N.E.C.: Northeast—New Hampshire, 1 (1-19); Rhode Island, 5 (20-99); Connecticut, 3 (20-99); New York, 38 (3,495); New Jersey, 44 (2,500-4,999); Pennsylvania, 28 (1,522); North Central—Indiana, 7 (1,000-2,499); Michigan, 16 (2,387); Wisconsin, 9 (20-99); Minnesota, 4 (250-499); Iowa, 3 (100-249); South Dakota, 1 (1-19); Kansas, 8 (1,000-2,499); South Atlantic—Delaware, 2 (500-999); Maryland, 12 (1,000-2,499); District of Columbia, 1 (1-19); Virginia, 6 (2,537); West Virginia, 5 (1,000-2,499); North Carolina, 5 (20-99); South Carolina, 3 (10,000 and over); East South Central—Kentucky, 5 (1,000-2,499); Alabama, 2 (500-999); Mississippi, 4 (250-499); West South Central—Arkansas, 3 (2,500-4,999); Oklahoma, 6 (100-249); Mountain—Montana, 1 (250-499); Idaho, 3 (500-999); Colorado, 6 (1,000-2,499); New Mexico, 2 (5,000-9,999); Arizona, 1 (1-19); Utah, 2 (100-249); Nevada, 1 (250-499); Pacific—Washington, 10 (5,000-9,999); Oregon, 3 (100-249); California, 43 (3,531).

<sup>2</sup> New England and Middle Atlantic combined.<sup>3</sup> East and West North Central combined.<sup>4</sup> South Atlantic, East and West South Central combined.<sup>5</sup> Mountain and Pacific combined.<sup>6</sup> Represents expenditures for only privately owned facilities.

## MANUFACTURES—INDUSTRY STATISTICS

Table 3.—DETAILED STATISTICS FOR THE UNITED STATES: 1954

(For explanation of line captions see Introduction)

Item	Sulfuric acid (S.I.C. 2811)		Alkalies and Chlorine (S.I.C. 2812)		Inorganic chemicals (S.I.C. 2819)	
	All establishments	Establishments with 90% or more primary product specialization	All establishments	Establishments with 90% or more primary product specialization	All establishments	Establishments with 90% or more primary product specialization

Materials, supplies, fuel, etc.....do...	8,449	3,281	26,864	5,051	103,198	70,622
Expenditures for plant and equipment, total.....do...	10,834	3,606	36,462	10,814	178,446	105,843
Capital expenditures, new.....do...	10,803	3,606	34,728	10,616	173,741	101,340
New structures and additions to plant.....do...	2,392	( <sup>3</sup> )	7,521	2,104	35,771	24,579
New machinery and equipment.....do...	8,411	3,244	27,207	8,512	137,970	76,761
Expenditures for used plant and equipment.....do...	( <sup>3</sup> )	( <sup>3</sup> )	1,734	( <sup>3</sup> )	4,705	4,503
Horsepower rating of power equipment at end of 1954:						
Horsepower of prime movers and electric motors driven by purchased energy, total.....1,000 hp..	136	70	988	363	5,240	1,146
Engines, etc., driving electric generators.....do...	12	8	646	198	1,112	299
Engines, etc., not driving electric generators.....do...	21	11	210	134	1,134	308
Electric motors driven by purchased energy.....do...	103	51	132	32	2,994	539
Electric motors driven by energy generated at the establishment.....do...	12	7	300	68	828	335

Note: Detailed figures may not add to the totals because of independent rounding. xxx Not applicable. NA Not available. <sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; first 4-digits of the product code represent the industry code to which the product is primary. While the statistics for "All establishments" include information for Government-owned privately operated plants, the data for establishments with 90% or more specialization exclude such figures. For further detail, particularly for Industry 2819, see Text.) <sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry. <sup>3</sup>Less than 500 tons. <sup>4</sup>Less than \$5 thousand. <sup>5</sup>Less than \$500 thousand.

## INDUSTRIAL INORGANIC CHEMICALS

28A-9

Table 4.—SELECTED STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY EMPLOYMENT SIZE, FOR THE UNITED STATES: 1954

(Value figures in thousands of dollars. For explanation of line captions see Introduction. Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted and the combined figure is underlined and shown in the size-class to the left)

Ind. code	Industry and item	Total, all establishments	Establishments with an average of—

NA Not available.

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.)

<sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry.

## MANUFACTURES—INDUSTRY STATISTICS

Table 5B.—INDUSTRY-PRODUCT ANALYSIS—SHIPMENTS BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954

(In thousands of dollars. The first column shows the total value of shipments of the specified industry divided among: (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products) and (c) miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed. The last column shows the total value of shipments of the primary products of the industry by all manufacturing industries)

Prod. class code	Sulfuric acid industry	Sulfuric acid (S.I.C. 2811)	Inorganic chemicals, n.e.c. (S.I.C. 2819)	Other industries	All industries

xxx Not applicable.

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>Includes \$5,252 thousand shipped by Industry 2829, Organic Chemicals, N.E.C.; \$7,411 thousand by Industry 2871, Fertilizers; and \$8,161 thousand by Industry 3333, Primary zinc.

<sup>2</sup>Includes \$6,910 thousand shipped by establishments classified in Industry 2819, Inorganic Chemicals, N.E.C.

<sup>3</sup>Includes \$8,844 thousand shipped by establishments classified in Industry 2819, Inorganic Chemicals, N.E.C.

<sup>4</sup>Of this figure, 73 percent consists of the following product classes: 28192, Chlorine and other bleaching compounds; 28195, Other potassium and sodium compounds; 28235, Synthetic resins, except protective coatings; 28421, Synthetic organic detergents, packaged; 28425, Alkaline detergents; 28963, Carbon dioxide; and 32952, Minerals and earths, ground or otherwise treated.

<sup>5</sup>Includes \$16,745 thousand shipped by establishments classified in Industry 2911, Petroleum Refining.

<sup>6</sup>Includes \$1,051 thousand shipped by establishments classified in Industry 2842, Cleaning and Polishing Products.

<sup>7</sup>Includes \$1,921 thousand shipped by establishments classified in Industry 2833, Medicinal Chemicals, Including Botanicals.

<sup>8</sup>Includes shipments (in thousands of dollars) by the following industries: \$8,145 shipped by Industry 2833, Medicinal Chemicals, Including Botanicals; \$22,006 by Industry 2852, Inorganic Color Pigments; \$8,549 by Industry 3331, Primary Copper; \$5,610 by Industry 3339, Primary Nonferrous Metals, N.E.C.; and \$9,859 by Industry 3341, Secondary Nonferrous Metals.

## INDUSTRIAL INORGANIC CHEMICALS

28A-11

Table 6A.--QUANTITY AND VALUE OF PRODUCTS SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, FOR THE UNITED STATES: 1954 AND 1947

Product code	Product	1954						1947

xxx Not applicable.

D Withheld to avoid disclosing figures for individual companies.

NA Not available.

<sup>1</sup>The 1954 data include figures for Government-owned but privately operated plants.<sup>2</sup>Total new (virgin) acid production in short tons of 100% H<sub>2</sub>SO<sub>4</sub> is as follows: 13,556,491 for 1954, and 10,103,393 for 1947.<sup>3</sup>Total new (virgin) acid (contact) production in short tons of 100% H<sub>2</sub>SO<sub>4</sub> is as follows: 11,044,764 for 1954, and 6,828,640 for 1947.<sup>4</sup>Production figures include quantities liquefied for use, storage, or shipments.<sup>5</sup>Excludes data for natural soda ash, which according to information published for Industry 1474, Potash, Soda, and Borate Minerals show for 1954 that 545,000 tons were produced and 527,000 tons valued at \$13,535,000 were shipped. The comparable 1947 data are 276,428 tons produced, and 260,670 tons valued at \$5,114,000 shipped.<sup>6</sup>Includes quantities consumed in the manufacture of finished light and dense soda ash, caustic soda, as well as quantities consumed in the manufacture of refined (finished) sodium bicarbonate.<sup>7</sup>Excludes quantities converted to finished dense soda ash.<sup>8</sup>Includes quantities later evaporated to dry caustic and reported as such.<sup>9</sup>Included in "Other Carbonates." The total primary production for all purposes of potassium carbonate in 1954 amounted to 24,665 short tons of 100% K<sub>2</sub>CO<sub>3</sub>.<sup>10</sup>Includes potassium carbonate, electrolytic soda ash, sodium carbonate (monohydrate), and sal soda.<sup>11</sup>Excludes products classified as alkaline detergents.<sup>12</sup>Primarily alkaline mixtures and residues.<sup>13</sup>Excludes the value of inorganic chemicals shipped by plants, whose primary activity is such that the establishment is classified as "nonmanufacturing." The data for specific chemicals (7 digit product codes), however, represent totals for wherever made, and therefore include figures for T.V.A. plants and those classified in the "Mineral Industries," which "nonmanufacturing" plants shipped \$88,474,000 of inorganic chemicals.<sup>14</sup>The sum of the detail product lines does not add to the product class totals because of the inclusion at the individual product level of shipments by plants classified as "nonmanufacturing." (See footnote 13.)<sup>15</sup>Includes amounts converted to solid.<sup>16</sup>Production include quantities reported by all establishments including those classified as "nonmanufacturing." The shipment data include only reports by plants classified as "manufacturing."<sup>17</sup>Codes 2819311, 2819321, 2819351, and 2819371 combined with code 2819398, "Other Inorganic Acids."<sup>18</sup>Codes 2819321 and 2819371 combined with code 2819398, "Other inorganic acids."<sup>19</sup>Codes 2819331, 2819728, and 2819730 combined with code 2819732, "Other chromium compounds."<sup>20</sup>Codes 2819421, 2819441, 2819461, 2819481, 2819483, 2819485 and 2819487 combined with product code 2819471, "Other inorganic aluminum compounds."<sup>21</sup>Codes 2819421, 2819425, and 2819427 combined with code 2819471, "Other Inorganic Aluminum Compounds."<sup>22</sup>In addition, 15,003 short tons were produced and consumed by municipalities.<sup>23</sup>Excludes quantities produced and consumed in establishments classified in pulp and paper industries.<sup>24</sup>Codes 2819461, 2819523, 2819525, 2819526, 2819528, 2819531, and 2819547 combined with codes 2819587, "Other sodium compounds, n.e.c."<sup>25</sup>Codes 2819511, 2819512, 2819514, and 2819516 combined with code 2819517, "Other potassium compounds, n.e.c."<sup>26</sup>Codes 2819511 combined with code 2819517.<sup>27</sup>The 1947 data exclude quantities produced or shipped by establishments primarily engaged in mining.<sup>28</sup>Codes 2819522, 2819523, 2819525, 2819526, 2819531, 2819547 combined with 2819587, "Other Sodium Compounds, N.E.C."<sup>29</sup>Represents quantities produced only for sale or interplant transfer.<sup>30</sup>Codes 2819581 combined with code 2819583, "Other sodium sulfide."<sup>31</sup>Codes 2819702 and 2819703 combined with code 2819706, "Other barium compounds."<sup>32</sup>Excludes chemicals classified in Industry 2852, Inorganic Color Pigments.<sup>33</sup>Codes 2819710, 2819773, 2819782, and 2819783, combined with code 2819798, "All other inorganic chemicals."<sup>34</sup>Code 2819712 has been combined with code 2819723.<sup>35</sup>Production of dicalcium phosphate for 1954 totaled 105,822 short tons for animal feed grades and 22,908 for other grades, except fertilizer grades. The comparable 1947 figure is 41,323 short tons. The 1954 figures for monobasic and tribasic may not be shown without disclosing figures for individual companies, whereas the 1947 figure of 36,898 short tons for monobasic may only be shown.<sup>36</sup>Codes 2819727, 2819739, 2819745, 2819746, 2819747, 2819782, and 2819783 combined with code 2819798, "All other inorganic chemicals."<sup>37</sup>Codes 2819733, 2819734, and 2819735 data included in totals for product code 2819737, "Other copper compounds."<sup>38</sup>The 1947 data include an unspecified amount of domestically produced crude.<sup>39</sup>Code 2819753 combined with code 2819759.<sup>40</sup>Plants which produced for sale or interplant transfer also produced and consumed an additional 7,046 short tons.<sup>41</sup>Codes 2819778 and 2819780 combined with code 2819781, "Other tin compounds."<sup>42</sup>Excludes quantities of liquid used to produce solid calcium chloride.<sup>43</sup>Codes 2819785, 2819786 combined with 2819788, "Other zinc compounds."<sup>44</sup>Codes 2819784, 2819785, and 2819786 combined with code 2819788, "Other zinc compounds."<sup>45</sup>Excludes data for calcium and lead arsenate and other arsenical preparations classified as primary to Industry 2897, Insecticides and Fungicides.<sup>46</sup>Includes defluorinated superphosphate and defluorinated phosphate rock (feed grade) now coded 2871371. (See also footnote 33).

## INDUSTRIAL INORGANIC CHEMICALS

28A-17

Table 6B.—VALUE OF PRODUCT CLASSES SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, BY DIVISIONS AND STATES FOR 1954, AND UNITED STATES TOTALS FOR EARLIER YEARS

(In thousands of dollars. Statistics are shown for selected product classes which are economically significant and production of which is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (Table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are listed only if the value of shipments is more than \$1 million and the figure does not disclose individual company information. Additional States which had shipments of more than \$1 million of the individual product classes are listed in footnote 1)

				Pacific.....	22,401

Note: The figures shown for 1950 to 1953 are sample estimates obtained from the Annual Survey of Manufactures for those years. Since the estimates are based on a sample they are subject to sampling variability, that is, they are not the same as figures which would have been obtained if complete censuses had been taken for those years. Measures of the sampling variability (standard errors) of the estimated total value of shipments of each product class are shown in the Annual Survey of Manufactures publications. Also shown are the standard errors of the relative change in shipments between some consecutive Annual Survey years which are the more significant measures when the series is studied for trend.

<sup>1</sup>For the specified product classes, shipments of over \$1 million were reported for the States listed but the exact figures are withheld to avoid disclosure of individual company figures: 28121, New York, Michigan, Maryland, Virginia, Alabama, Arkansas, Louisiana, Nevada, Washington, Oregon, and California; 28191, Massachusetts, New York, New Jersey, Ohio, Illinois, Missouri, Nebraska, Kansas, Maryland, Virginia, West Virginia, Kentucky, Mississippi, Arkansas, Texas, Nevada, and Washington; 28192, Minnesota, Missouri, Tennessee, and Washington; 28193, Massachusetts, New York, Indiana, Illinois, Michigan, Kansas, Delaware, Maryland, North Carolina, Kentucky, Louisiana, Texas, and Nevada; 28195, Massachusetts, Rhode Island, Indiana, Michigan, Missouri, Kansas, Delaware, West Virginia, Tennessee, Alabama, Louisiana, Utah, Nevada; 28197, Rhode Island, Indiana, Minnesota, Iowa, Missouri, Kansas, Delaware, West Virginia, South Carolina, Georgia, Kentucky, Tennessee, Alabama, Louisiana, Montana, Idaho, Colorado, Nevada, Washington, Oregon, and California.

## INDUSTRIAL INORGANIC CHEMICALS

## INDUSTRIAL INORGANIC CHEMICALS

28A-23

Table 8.—GENERAL STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY SPECIALIZATION AND PRIMARY PRODUCT CLASS SPECIALIZATION, FOR THE UNITED STATES: 1954

(This table presents selected statistics for establishments classified according to their degree of specialization in products primary to the industry. The establishments are classified in two ways: (1) by industry specialization—the degree of specialization in all primary products of the industry; and (2) by product-class specialization—the degree of specialization in the largest product class of the establishment. The degree of "industry specialization" for an establishment represents the ratio of its primary product shipments to its total product shipments, primary and secondary. The degree of "product-class specialization" for an establishment represents the ratio of its largest product class shipments to its total product shipments, primary and secondary. Data are not shown for some industries, product classes, and specialization ranges for a variety of reasons, consequently, detailed figures frequently do not add to the totals. See Introduction for detailed explanation)

Ind. or product class No.	Industry or product class by percent of specialization	Estab- lish- ments, number	All employees		Production workers			Value added by manufacture (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments (\$1,000)

<sup>1</sup>About 79 percent of total employment and 92 percent of value of products shipped are accounted for by establishments with 50-89 percent specialization.

# Industrial Organic Chemicals

This report shows 1954 Census of Manufactures statistics for establishments classified into each of the following industries:

Code	Title
2821--	Cyclic (Coal-Tar) Crudes
2822--	Intermediates, and Organic Colors
2823--	Plastics Materials and Elastomers, Except Synthetic Rubber
2824--	Synthetic Rubber
2825--	Synthetic Fibers
2826--	Explosives
2829--	Industrial Organic Chemicals, Not Elsewhere Classified

Establishments primarily engaged in manufacturing drugs and medicines are classified in the Drug and Medicine Industries (Group 283), cosmetics in the Toilet Preparations Industry (2893), wood distillation products and naval stores in the Gum and Wood Chemical Industries (Group 286), organic insecticidal and fungicidal preparations in the Insecticides and Fungicides Industry (2897), and soap and glycerine in that Industry (2841).

Comments concerning the economic and technological characteristics of the industries included in this group appear in the textual material for "Chemicals and Allied Products" (Major Group 28). These comments are pertinent in any analysis of the statistics relating to employment, cost of materials, value added by manufacture, value of shipments, plant specialization, etc. The remarks concerning research activities and the employment data for research personnel should also be particularly noted. Data concerning the number of research workers employed and research expenditures by companies engaged in manufacturing synthetic organic chemicals are compiled by the United States Tariff Commission and published annually in its publication, "Synthetic Organic Chemicals, United States Production and Sales."

Annual data showing quantities produced and shipped and the dollar value of shipments for many synthetic organic chemicals

are published by the United States Tariff Commission. Monthly production figures for a more limited list of organic chemicals are also published by that agency in its Facts for Industry Series 6-2, Report on the Production of Selected Synthetic Organic Chemicals in the United States.

In order to avoid duplicating the reports furnished to the U. S. Tariff Commission for synthetic organic chemicals (except plastics materials) establishments reporting these products to this agency were requested to report dollar values by product classes to the Bureau of the Census including the value of those synthetic organic chemicals shipped as interplant transfers. As indicated in the table below, the dollar value reported to the Census Bureau differ from those reported to the United States Tariff Commission. Other product classes, data for which are reported to the United States Tariff Commission, are primary to other industry groupings: surface active agents, those primarily for detergent purposes as well as sulfonated fats and oils, to Soap, Glycerine, Cleaning, and Polishing Preparations (Group 284), and products from petroleum and natural gas for chemical conversion to the Petroleum Industry (2911). Thus, reference to these products are not contained in this report.

In general, data reported to the Census Bureau are for the value of the product as shipped whether it is a chemical compound or a finished product (preparation or mixture). Sales figures reported to the Tariff Commission represent the value of the organic chemical compound whether it is shipped as such or incorporated in another product. This difference in reporting methods is illustrated by the fact that an establishment manufacturing cellulose acetate, ethylene glycol, or color lakes may report the dollar sales of these products as acetate fiber or antifreeze preparations, or paint products, respectively, to the Census Bureau and as miscellaneous acyclic chemical products and synthetic lakes to the United States Tariff Commission. Thus, in general, the figures published by the Tariff Commission are higher since a portion of organic chemical compounds, not shipped as such, is nevertheless included in the Tariff Commission report.

Some of the differences are also partly explained by differences in definition. For example, the Tariff Commission figure

SHIPMENTS AND INTERPLANT TRANSFERS OF SYNTHETIC ORGANIC CHEMICALS: 1954  
(In millions of dollars)

Code	Product or product class	As reported by--		
		Bureau of the Census		Tariff Commission
		Shipments including interplant transfers	Commercial shipments only	Sales
28210	Tar crudes.....	87	77	236
28221	Intermediates.....	467	316	320
28222	Dyes.....	156	151	160
28223	Synthetic organic pigments, lakes and toners.....	68	11	54
28240	Synthetic rubber (elastomers).....	392	(NA)	426
28294	Synthetic organic chemicals, n.e.c.....	263	234	...
2829431	Rubber processing chemicals.....	61	(D)	62
2829451	Plasticizers.....	99	83	82
2829411	Flavor and perfume materials.....	43	(d)	47
2829471	Bulk surface active agents (penetrant, wetting agents, etc.) other than detergents and sulfonated oils.....	55	54	(NA)
28292	Miscellaneous cyclic chemical products.....	86	77	77
28293	Miscellaneous acyclic chemical and chemical products.....	1,569	1,134	1,136
28295	Pesticides and other organic agricultural chemicals.....	97	90	125

for synthetic (chemical) rubber includes data for elastomers which were reported to the Census Bureau as plastics materials (e.g. polyvinyl types). Reports to the Census Bureau are based on plant reports and the dollar shipment figures represent the valuation (f.o.b. plant) of all goods physically shipped from this producing site. Thus the Census data include products shipped on consignment and interplant transfers (separate measures are shown in Table 6A) while the Tariff Commission data represent sales on a company basis by primary producers only when accompanied by passage of title.

The Tariff Commission also secures product data from laboratories which are primarily service organizations, whereas the product data from these establishments are excluded from the Census of Manufactures. On the other hand, the census totals include reports for primary producers included in the Tariff Commission figures, as well as reports for blenders and plants operating under Government contract which are outside the scope of the Tariff survey.

In addition to the above, there are specific reasons why the figures for certain product classes published by the two agencies differ. For example, the Tariff Commission total for tar crudes includes data furnished to the Coal Economics Division of the United States Bureau of Mines by coke oven operators, and data furnished to the American Gas Association by producers of water-gas and oil-gas tar. The Census Bureau total appearing in this report does not include these figures since the data for byproduct ovens are classified and shown in Industry 2932, Byproduct Coke Ovens, and establishments operating medium and low temperature carbonization plants and retorts are excluded from the Census of Manufactures.

The data for some product groupings are in closer agreement than others to the degree that the concepts of plant and company, and specialization and integration approach identities. In other instances, apparent agreement is the result of compensating figures (see Industries 2821, 2822, and 2829 for additional explanations). Despite these differences in the two sets of data, they should be considered as complementary; those of the Census Bureau represent the shipment values by plants classified in manufacturing industries for groups of synthetic organic chemicals in the form in which they are actually shipped, and those of the Tariff Commission, represent company sales and production for a detailed list of products.

#### 2821--Cyclic (Coal-Tar) Crudes

This industry comprises establishments primarily engaged in manufacturing crudes from coal-tar. Such crudes include (1) light-oil products such as benzene and toluene; (2) coal-tar acids such as creosols and cresylic acid; and (3) products of medium and heavy oil such as creosote oil, naphthalene, anthracene, and their higher homologues, and tar. Other products manufactured from coal tar included in this industry are: xylene, solvent naphtha, road tar, and pitch of tar. Establishments primarily engaged in manufacturing coal-tar crudes in byproduct coke ovens are classified in Industry 2932, Byproduct Coke Ovens, and petroleum refineries which produce such products in Industry 2911, Petroleum Refining.

The value of shipments of Industry 2821, Cyclic (Coal-Tar) Crudes, in 1954 totaled \$77 million. This included shipments of cyclic (coal-tar) crudes (primary products) valued at \$63 million, shipments of secondary products valued at \$14 million, and a negligible amount for miscellaneous receipts.

Industry 2821 shipments of cyclic (coal-tar) crudes in 1954 represented 82 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 85 percent. Secondary products shipped by this industry in 1954 consisted mainly of asphalt and tar roofing, siding and felts, \$4 million; and other secondary products including cyclic (coal-tar) intermediates and industrial product finishes totaling \$10 million.

Industry 2821 shipments of cyclic (coal-tar) crudes in 1954 represented 72 percent of these products, valued at \$87 million, shipped by all industries. This coverage ratio in 1947 was 78 percent. Other industries shipping cyclic (coal-tar) crudes in 1954 consisted mainly of Industry 2823, Plastic Materials; Industry 2822, Intermediates, and Organic Colors; and Industry 2952, Roofing Felts and Coatings.

The establishments classified in Industry 2821 are frequently known as "tar distillers." They are distinguished from those classified in Industry 2932, Byproduct Coke Ovens, or in Industry 2911, Petroleum Refining, by the fact that the plants

classified in Industry 2821 purchase crude tars and condensed liquids, products produced in Industries 2932 and 2911 from coal or crude petroleum, and also do not produce products necessarily associated with coke ovens or petroleum refineries. Although tar distillers are purchasers of crude tar and are dependent upon the variables affecting the supply of these materials, such as the activity of the steel industry or the consumption of manufactured gas for industrial use, the distillation equipment used is similar in all the industries manufacturing coal tar fractions. This equipment, however, may vary and ranges from the older fire-heated batch stills to modern continuous pipe stills.

Distillation of coal tar principally yields four fractions: light oils (benzene, toluene and homologues), middle oils or creosote oils containing naphthalene and tar acids (phenol, cresols, etc.), anthracene oil, and pitch. The absolute and relative quantities produced by establishments classified in this industry have varied markedly. For example, in 1947, the distillers accounted for about 69 percent of the total crude naphthalene produced, and coke oven operators, the remainder; whereas in 1954 the output by tar distillers was about 59 percent of the total. An increasing proportion of products produced by tar distillers are being derived from petroleum. For example the quantities of toluene produced by each type of operator are shown below.

Type of operator	1947	1954
(In thousands of gallons)		
Tar distillers.....	6,966	2,917
Coke oven operators.....	26,346	33,383
Petroleum operators.....	27,378	122,885
Total, all grades.....	60,740	159,185

Source: U.S. Tariff Commission

The majority of the plants classified in Industry 2821 are owned by companies which either operate byproduct coke ovens or other establishments utilizing the cyclic crudes produced in these tar distillation plants. The tendency among these plants is to fabricate these cyclic coal crudes into intermediates or other end products. Therefore, shipments in more recent years contain a greater "product mix" than formerly.

As stated previously, no attempt was made by the Census Bureau to secure commodity detail for the tar crudes manufactured by tar distillers since this information is compiled and published by the United States Tariff Commission in Synthetic Organic Chemicals, United States Production and Sales. Direct comparisons between the product class data reported to the Census Bureau and the product information reported to the United States Tariff Commission may not be made since, for disclosure reasons, the statistics published by the Tariff Commission do not show all products produced by tar distillers as distinguished from products produced by petroleum refineries or others.

#### 2822--Intermediates and Organic Colors (Full Standard Industrial Classification Title, Intermediates, Dyes, Color Lakes and Toners)

This industry comprises establishments primarily engaged in manufacturing cyclic intermediates, dyes, color lakes, and toners. Important products of this industry include (1) derivatives of benzene, toluene, phenol, aniline, nitrobenzene and other cyclic intermediates; (2) classified and unclassified dyes such as azo and anthraquinone, and food, drug, and cosmetic dyes; and (3) lakes and extended colors, toners, or full strength organic colors and reduced toners. Establishments primarily engaged in manufacturing inorganic color pigments are classified in Industry 2852, Inorganic Color Pigments; natural dyeing materials in Industry 2865, Natural Tanning and Dyeing Materials; and natural food colors in Industry 2095, Flavorings. For a detailed list of primary products of Industry 2822, refer to Table 6A, product codes 2822111 to 2822311.

The value of shipments of Industry 2822 in 1954 totaled \$715 million. This included shipments of primary products (intermediates, dyes, color lakes and toners) valued at \$455 million, shipments of other products generally derived from intermediates and classified as secondary products valued at \$258 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$2 million.

Receipts for merchandising (products bought and resold without further manufacture or processing) valued at \$27 million are excluded from the \$715 million value of shipments of Industry 2822. Data relating to these merchandising receipts are also excluded from the cost of materials and value added by manufacture, but these activities are reflected in other detailed industry statistics, such as employment and inventories.

Industry 2822 shipments of intermediates, color lakes and toners in 1954 represented 64 percent of its total product shipments (primary and secondary). Secondary products shipped by this industry in 1954 consisted mainly of industrial inorganic chemicals, n.e.c., \$31 million; industrial organic chemicals, n.e.c.; \$82 million; inorganic and organic medicinal chemicals, \$30 million; and inorganic color pigments, \$16 million.

Industry 2822 shipments of intermediates, lakes, and toners for sale or interplant transfers in 1954 represented 66 percent of these products, valued at \$691 million, shipped by all industries. Other industries, mainly Industry 2829, Industrial Organic Chemicals, and Industry 2823, Plastics Materials, shipped intermediates, lakes, and toners totaling \$236 million. Industry 2822 accounted for 73 percent of all dye shipments compared with the coverage ratio of 62 percent for intermediates.

The statistics for this industry appearing in the 1947 Census of Manufactures and Annual Survey of Manufactures Volumes were not shown separately, but were included with the data for Industry 2829, Industrial Organic Chemicals, Not Elsewhere Classified. Selected 1947 data have been retabulated for comparability with 1954 statistics.

The economic union of the synthetic compounds called intermediates, dyes, lakes and toners is not primarily due to similarities of processing but results from the advantages of carrying on the manufacturing process from the raw materials to the finished products in the same establishment. The synthetic organic compounds, known as "intermediates," are not only a link between the low value products of the distillation of coal tar (products of Industries 2821, 2911 and 2932) and the valuable dyes but also one with other valuable organic chemicals. Thus, plants producing phenol also produce phenolic resins (plastics materials), or producing styrene, produce synthetic rubber or similar complex organic compounds. The United States Tariff Commission, which compiles product detail for cyclic intermediates, states that in 1947 about 45 percent of the total output of these products was consumed in the producing plants in the manufacture of more advanced intermediates and finished products. In 1954, the comparable percentage was about 66. Conversely, establishments classified in Industry 2829, Industrial Organic Chemicals, also produce sizeable quantities of intermediates, dyes, color lakes, and toners.

In addition to the remarks contained in the general discussion of Major Group 28, the following observations may be of help in the analysis of Census data for these groups of products.

(1) Many products classified as intermediates represent successive steps in production.

(2) Some products such as phenol are produced commercially by two or more different processes, or are made from materials derived from different sources. For example, in recent years an increasing amount of cyclic intermediates has been obtained from petroleum or natural gasoline rather than from cyclic coal tars. In addition, newer and more continuous processes are being introduced.

(3) The "product mix" of these plants includes some inorganic chemicals either because these chemicals are required in the production of intermediates by such processes as nitration, reduction, or halogenation, or result as a co-product or byproduct in the production of products classified as primary to Industry 2819, such as byproduct hydrochloric acid.

(4) Also, when one product is produced, a second is also produced as, for example, when one ton of oxyphenine yellow 26 is made, one ton of primuline, another yellow dye, is simultaneously produced.

(5) Since these cyclic intermediates may be used to manufacture many products, they are influenced by changing market conditions. For example, aniline is usually associated with dye manufacture but, in wartime, demand for aniline rises since it is an important material for the manufacture of diphenylamine used in smokeless powder and in the manufacture of tetryl.

(6) While the vast number of the establishments classified in this industry are prime producers, a number of plants included in this industry are blenders, producing finished dyes or organic pigments from purchased synthetic products.

## 2823--Plastics Materials and Elastomers, Except Synthetic Rubber

This industry comprises establishments primarily engaged in manufacturing plastics materials in the form of sheets, rods, tubes, granules, powders, or liquids for use in further manufacturing. Important products of this industry include: (1) condensation plastics, such as alkyd, phenolic, and urea resins; (2) polymerization plastics, except fibers, such as polyvinyl alcohol, ester, halide, and copolymer resins; polyhexamethylene-diamine adipamide resins; (3) protein plastics such as casein, soybean, and coffee bean; (4) cellulose plastics, regenerated cellulose sheets, and vulcanized fiber; (5) carbohydrate plastics; and (6) synthetic elastomers such as plasticized polyvinyl alcohol, polyvinyl chloride, polyisobutylene elastomers and other similar products. Establishments primarily engaged in manufacturing rayon and other synthetic fibers are classified in Industry 2825, Synthetic Fibers, synthetic rubber in Industry 2824, Synthetic Rubber; artificial leather in Industry 2295, Coated Fabrics, Except Rubberized; and sensitized and non-sensitized photographic film in Industry 3861, Photographic Equipment. Establishments primarily engaged in manufacturing unsupported film from purchased resins are classified in Industry 3971, Plastics Products, N.E.C.

Minor changes in the content of Industry 2823 have been made since 1947. The principal one relates to plants primarily engaged in manufacturing caps, bands, and sponges from regenerated cellulosic materials which are now classified in this industry since caps and bands are generally made in the same plants manufacturing sheet material from regenerated cellulose. In 1947, such plants were classified in Industry 2825, Synthetic Fibers. Selected 1947 data have been retabulated for comparability with 1954. For a detailed list of primary products of Industry 2823, refer to Table 6A, product codes 2823111 to 2823698.

The value of shipments of Industry 2823, Plastics Materials and Elastomers, in 1954 totaled \$1,231 million. This included shipments of primary products (plastics materials and elastomers, except synthetic rubber), valued at \$1,099 million, shipments of secondary products valued at \$127 million, and miscellaneous receipts (mainly contract work on materials owned by others and scrap) of \$5 million.

Industry 2823 shipments of plastics materials and elastomers materials in 1954 represented 90 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 92 percent. Secondary products shipped by this industry in 1954 consisted mainly of chemical specialties, \$2 million; cyclic intermediates, \$9 million; synthetic organic chemicals, n.e.c., \$43 million; glues and adhesives, \$7 million; and fabricated plastics products, \$8 million.

Industry 2823 shipments of plastics materials and elastomers in 1954 represented 75 percent of these products, valued at \$1,463 million, shipped by all industries. This coverage ratio in 1947 was 77 percent. Other industries, mainly Industry 2829, Industrial Organic Chemicals, N.E.C., Industry 2851, Paints and Varnishes, Industry 3099, Rubber Industries, N.E.C., and Industry 3971, Plastics Products, N.E.C., shipped plastics materials and elastomers totaling \$364 million in 1954.

The industrial processes differ with the type of plastics materials produced. Many of these plants specialize in the manufacture of a specific grouping of plastics materials and integration to finished plastic products at the same plant site is generally not characteristic of the plants classified in this industry. While a portion of these plastics materials are captively used for finished products produced in other plants of the same company, no measurements are provided since separated data for interplant transfers were not requested.

In interpreting the statistics relating to size of establishments, consideration should be given to the fact that the industry totals include establishments which purchase plastics materials and reformulate them according to their own or customer specifications. Generally, such establishments are relatively small.

Information concerning the consumption of specified materials consumed by the plastics materials industry is shown in Table

7, Materials Consumed, By Kind. Information was not compiled indicating the quantities produced from petrochemicals. However, information concerning the production of petroleum polymer resins and the basic materials used to produce intermediates consumed in the manufacture of plastics materials may be derived from data published by the U. S. Tariff Commission.

The quantity data shown in Table 6A, Quantity and Value of Products, are on the basis indicated respectively for each commodity. In general, these bases are identical with those used by the United States Tariff Commission in collecting its monthly figures as shown in its Facts for Industry Series 6-10, Production and Sales of Plastics and Resin Materials.

#### 2824--Synthetic Rubber

This industry comprises establishments primarily engaged in manufacturing synthetic rubber by polymerization or copolymerization. Important products of this industry include butadiene styrene type (GR-S and Buna S), butadiene-acrylonitrile type (GR-N), and all other vulcanizable elastomers. (An elastomer for the purpose of this classification is a rubber-like material which will stretch 150 percent or more and return with force to approximately its original shape and position.) Establishments primarily engaged in manufacturing nonvulcanizable elastomer materials are classified in Industry 2823, Plastics Materials and Elastomers, Except Synthetic Rubber, and synthetic organic rubber-processing chemicals (accelerators and anti-oxidants) are classified in Industry 2829, Industrial Organic Chemicals, N.E.C. For a detailed list of primary products of Industry 2824, refer to Table 6A, product codes 2824011 to 2824051.

The value of shipments of Industry 2824, Synthetic Rubber, in 1954 totaled \$361 million. This included shipments of synthetic (chemical) rubbers (primary products) valued at \$351 million, shipments of secondary products valued at \$8 million, and miscellaneous receipts (mainly scrap and receipts for research and development work) of \$2 million.

Industry 2824 shipments of synthetic (chemical) rubbers and other synthetic elastomers in 1954 represented 98 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 96 percent. Secondary products, mainly synthetic organic chemicals, n.e.c., and synthetic resins, shipped by plants classified in this industry in 1954 totaled \$8 million.

Industry 2824 shipments of synthetic (chemical) rubbers in 1954 represented 90 percent of these products, valued at \$392 million, shipped by all industries. This coverage ratio in 1947 was 89 percent. About \$23 million of synthetic (chemical) rubbers was also shipped in 1954 by establishments classified in Industry 2829, Industrial Organic Chemicals, N.E.C.

As indicated above, the plants manufacturing synthetic (chemical) rubbers have a high degree of specialization. A principal reason for this is that the bulk of the 1947-1954 output was produced in Government-owned plants which were privately managed for the account of the Reconstruction Finance Corporation and successor agencies. These plants were sold during 1955. The most important products are the butadiene-styrene type (S-type, Buna S) primarily used in the production of tire casings and butyl or (GR-1) rubber used in the manufacture of inner tubes. The output and prices of these rubbers were controlled by this Governmental agency and by legislation (Rubber Act of 1948 and Amendments), which authorized the President to exercise controls to insure consumption of synthetic rubber of specified amounts. In addition to this legislation which was effective until May 1, 1955, preferences for synthetic rubber for certain uses, and price factors favored the growing use of synthetic rubber. These and other chemical rubbers, such as neoprene and N-types (oil resistant types), are now all manufactured in non-Governmental plants.

Many of the former Government-owned facilities are located adjacent to petroleum refineries. Present ownership is by oil or rubber companies. Their activities are limited to the production of synthetic rubber and/or butadiene feed stocks, while the non-Government plants manufacturing other types of rubber produce products other than synthetic rubber, which classify some of them in Industry 2829, Industrial Organic Chemicals, N.E.C. However, all of the plants have a relatively high degree of homogeneity and the data shown in this report do not distinguish among plants on the basis of ownership.

The raw materials used during 1947 and 1954 for GR-S, namely butadiene and styrene, and for the butyl rubber, namely isobutylene, were primarily derived from petroleum products. These raw materials are also used as high octane components of aviation and motor gasoline as well as for plastics materials. Other rubbers are made from other products, for example, neoprene from acetylene. As indicated in Table 7, Materials Consumed, by Kind, the data are primarily limited to the quantities consumed in the manufacture of the poly butadiene styrene type of rubber.

Detailed product statistics for synthetic rubbers based upon chemical composition are compiled and published by the United States Tariff Commission. Whereas the quantity figures reported to the Tariff Commission do not include the weight of the carbon black included in the rubber, Census figures show the unduplicated quantities produced and shipped with and without carbon black. Monthly data showing production, consumption, and stocks of synthetic rubbers by kind are published by the Business and Defense Services Administration, United States Department of Commerce. Statistics showing the 1954 consumption of synthetic rubbers by product groupings for establishments classified in the Rubber Industries, Rolling, Drawing, and Alloying of Non-Ferrous Metals Industries, and Insulated Wire and Cable Industry appear in the report for Rubber Products (Major Group 30) and those containing the product statistics for the other products.

#### 2825--Synthetic Fibers

This industry comprises establishments primarily engaged in manufacturing rayon, nylon, and other synthetic fibers to be used as materials for further manufacturing. Important products of this industry include fibers of cellulose acetate, regenerated cellulose, polyvinyl ester polyvinylidene chloride, vinyl chloride, polymeric amide, and protein. Textile mills primarily engaged in throwing, spinning, and weaving rayon, nylon, or other synthetic fibers are classified in Major Group 22, Textile mill products, and glass fiber, stock and roving are classified in Industry 3229, Pressed and Blown Glassware, N.E.C.

Minor changes in the content of Industry 2825 have been made since the 1947 census to conform with the Standard Industrial Classification. Cellulose caps, bands, sponges, etc., previously included in this industry are now included in Industry 2823, Plastics Materials; and synthetic sausage casings, in Industry 2014, Sausage Casings. Selected 1947 data have been retabulated for these changes for comparability with 1954. For a detailed list of primary products of this industry, refer to Table 6A, product codes 2825111 to 2825385 (codes 2825311 through 2825385 are represented by 28253XX).

The value of shipments of Industry 2825, Synthetic Fibers, in 1954 totaled \$1,241 million. This included shipments of primary products (synthetic fibers) valued at \$1,190 million, shipments of secondary products valued at \$43 million, and miscellaneous receipts (mainly scrap and salable refuse) of \$8 million.

This industry's shipments of synthetic fibers in 1954 represented 96 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 97 percent. Secondary products shipped by this industry in 1954 consisted mainly of sodium compounds, \$4 million; and other secondary products including cellulose plastics materials, synthetic resins, and organic chemicals, totaling \$39 million.

Industry 2825 shipments of synthetic fibers in 1954 represented 98 percent of the synthetic fibers, valued at \$678 million, shipped by all industries. This coverage ratio in 1947 was also 98 percent.

The principal types of cellulosic fibers are viscose, cuprammonium, and acetate yarns. The statistics relating to the former two yarns are combined in Tables 6A, 6B and 8, to prevent disclosing the operations of the one plant still utilizing the cuprammonium process. Rayon and acetate yarn plants are relatively large and several of them are operated in conjunction with other company establishments which have been classified in the tire cord, weaving and knitting industries. Only one establishment produces viscose and rayon yarn at the same site. Some plants manufacturing acetate rayon also produce organic chemicals some of which are captively used and the remainder is either shipped to other acetate yarn plants of the same company or for sale to other companies. The data shown below exclude information for "pilot" plants producing small amounts of synthetic fibers on an experimental basis.

The majority of plants manufacturing noncellulosic synthetic fibers other than glass fibers are owned by firms engaged in manufacturing cellulosic fibers or by prominent organic chemical producers. The output has grown more than 6 fold from 44 million pounds in 1947, to 290 million pounds in 1954 for such fibers.

The material-product relationships differ, of course, with the product output but within such product groupings as viscose yarns or acetate yarns, this relationship does not vary much. In those instances where acetate plants purchased or received cellulose acetate flake rather than pulp, such respondents were requested to convert these figures to a basic raw material basis. The consumption data for this industry shown in Table 7 are a relatively complete list of materials for the viscose and acetate fibers. The materials consumed for other synthetic fibers are generally not specified but included in "All other materials."

#### 2826--Explosives

This industry comprises establishments primarily engaged in manufacturing explosives such as sporting powder, blasting powder, high explosives, nitrated carbohydrates, safety fuses, and blasting and detonating caps. Establishments primarily engaged in manufacturing ammunition for small arms are classified in Industry 1961, Small Arms Ammunition; and in Group 192, Artillery Ammunition; and fireworks and pyrotechnics such as flashlight bombs, flares (all kinds) railroad torpedoes, and fuses (highway, marine and railroad) in Industry 3985, Fireworks and Pyrotechnics.

Establishments primarily engaged in shooting wells and also engaged in manufacturing nitroglycerine are included in the Census of Minerals. For a detailed list of primary products of Industry 2826, refer to Table 6A, product codes 2826011 to 2826071.

The value of shipments of Industry 2826, Explosives, in 1954 totaled \$390 million. This included shipments of primary products (explosives) valued at \$167 million, shipments of secondary products valued at \$9 million, and miscellaneous receipts which include the value of explosives produced in Government-owned, privately operated plants of \$213 million.

Industry 2826 shipments of explosives in 1954 represented 98 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 87 percent. Secondary products shipped by this industry in 1954 consisted mainly of synthetic ammonia, nitric acid and ammonium compounds, \$5 million, and miscellaneous other products including sulfuric acid, \$4 million.

Industry 2826 shipments of explosives in 1954 represented 91 percent of the explosives, valued at \$184 million, shipped by all industries. This coverage ratio in 1947 was 99 percent.

The data subsequent to 1947 shown in the tables include information for Government-owned plants operated by private firms for the account of the Federal Government, but exclude information for Government-owned and/or operated plants. Since the capital expenditures made by these privately operated plants are paid for by current billings to the United States Government, these amounts are excluded from the statistics shown in this report which represent expenditures for privately owned facilities. The detailed product statistics appearing in Table 6A, Quantity and Value of Products, represent only the amounts and type of explosive produced by privately owned and privately operated plants. On the other hand, the data for materials consumed (Table 7) include figures for all plants classified in this industry.

The plants included in Industry 2826 vary in scope from those preparing only nitroglycerine to highly integrated establishments which produce their own basic chemicals such as sulfuric and nitric acids. For varied reasons the latter plants also ship inorganic acids and other organic compounds used in the manufacture of explosives. Establishments engaged in well shooting only are excluded from this industry since such establishments are included in the Census of Mineral Industries under "Oil and gas field services performed by contractors." No data are shown for the value of nitroglycerine used in shooting wells since most manufacturers cannot report values for this product separately from "Other receipts."

The products classified as primary to this industry exclude the rocket fuels which are classified as organic and inorganic chemicals, and pyrotechnic mixtures, which are classified in the Fireworks Industry (3985), and other products associated with chemical warfare, but include data for "charges" used to ignite fuels for jet propulsion.

Data showing the quantities of black blasting powder, pellet and granular, of "permissibles" and of "high explosives, except permissibles" sold for consumption are published by the United States Bureau of Mines. The figures appearing in this report differ slightly from those published by the United States Department of the Interior, Bureau of Mines, because of minor reporting differences.

#### 2829--Industrial Organic Chemicals, Not Elsewhere Classified

This industry comprises establishments primarily engaged in manufacturing industrial organic chemicals, not elsewhere classified. Important products of this industry include: (1) non-cyclic organic chemicals such as acetic, chloroacetic, adipic, formic, oxalic and tartaric acids and their metallic salts; chloral, formaldehyde and methylamine; (2) solvents such as amyl, butyl, and ethyl alcohols; methanol; ethylene glycol; amyl, butyl, and ethyl acetates; ethyl ether, ethylene glycol ether, and diethylene glycol ether; acetone, carbon disulfide, and carbon tetrachloride; (3) synthetic perfume and flavoring materials such as coumarin, methyl salicylate, saccharin, citral, citronellal, synthetic geraniol, ionone, terpineol, and synthetic vanillin; (4) rubber chemicals such as accelerators and antioxidants; (5) plasticizers such as synthetic camphor, phthalates and tricresyl and triphenyl phosphates; (6) synthetic tanning materials; and (7) chemical-warfare gases. Establishments primarily engaged in manufacturing organic medicinal chemicals are classified in Group 283, Drugs and Medicines, soap and glycerine in Industry 2841, Soap and Glycerine, essential oils in Industry 2892, Essential Oils; wood distillation products, naval stores and natural dyeing and tanning materials in Group 286, Gum and Wood Chemicals; and insecticides, fungicides, and other agricultural pesticidal preparations, in Industry 2897, Insecticides and Fungicides. Distilleries engaged in manufacturing grain alcohol for beverage purposes are classified in Industry 2085, Distilled Liquor, Except Brandy.

While the statistics for Industry 2829 appearing in the 1947 Census of Manufactures include data for plants classified in Industry 2822, Intermediates, and Organic Colors, selected 1947 statistics have been retabulated for comparability with 1954. For a detailed list of primary products of Industry 2829, refer to Table 6A, product codes 2829111 to 2829671.

The value of shipments of Industry 2829, Industrial Organic Chemicals, N.E.C., in 1954 totaled \$2,199 million. This included shipments of primary products (industrial organic chemicals, n.e.c.) valued at \$1,676 million, shipments of secondary products valued at \$514 million, and miscellaneous receipts (mainly nonmanufactured products and scrap) of \$9 million.

Receipts for merchandising (products bought and resold without further manufacture or processing) valued at \$46 million are excluded from the \$2,199 million value of shipments of Industry 2829. Data relating to these merchandising receipts are also excluded from the cost of materials and value added by manufacture, but these activities are reflected in other detailed industry statistics, such as employment and inventories.

Industry 2829 shipments of industrial organic chemicals in 1954 represented 77 percent of its total product shipments (primary and secondary). Secondary products shipped by this industry in 1954 consisted mainly of inorganic chemicals, \$55 million; plastics materials, chlorine and sodium hydroxide, \$27 million; intermediates, \$112 million; medicinal chemicals, \$16 million; synthetic rubber, \$23 million; and liquid petroleum gases, \$24 million.

Industry 2829 shipments of miscellaneous organic chemicals, n.e.c. (primary products) in 1954 represented 80 percent of these products, valued at \$2,082 million, shipped by all industries. Other industries shipping industrial organic chemicals, n.e.c., consisted mainly of Industry 2822, Intermediates and organic colors, \$92 million; Industry 2819, Inorganic Chemicals, N.E.C., \$31 million; Industry 2812, Alkalies and Chlorine, \$29 million; and Industry 2823, Plastics Materials, \$57 million.

The range of products and the degree of integration of the plants classified in Industry 2829 vary widely. Because of the heterogeneous products and processes embraced, generalizations are difficult and reference should be made to the general discussion of Industry Group 282. Additional remarks may also be found in the section dealing with Industry 2822. Thus, the industry is composed of establishments which vary widely in the chemical processes employed, 'product mix,' and in the materials consumed to manufacture the end products.

The principal products generally result from nitration, esterification, amination by reduction, amination by ammonolysis, halogenation, sulfonation, hydrolysis, hydrogenation, alkylation, and condensation. As a result one finds these plants to be consumers and frequently producers of inorganic chemicals used in such processes. In addition, for reasons indicated in the general discussion of Industry Group 282, these plants are characterized by vertical integration both towards the raw materials and towards the more finished packaged consumer goods.

The rapid growth of this branch of the chemical industry is resulting in new geographic areas arising as important loca-

tions. This is particularly noticeable in the South Central and Pacific regions. The availability of raw materials, particularly petroleum gases, the industrialization of those areas, and their growth as consuming markets are causes of these shifts.

The list of materials shown as consumed in Table 7, Materials Consumed By Kind, are only representative of a small portion of the varied chemicals consumed. As indicated above, a considerable proportion of 'intermediates' are captively produced but in addition are purchased or received from other producing plants of the same company. The statistics appearing in this table are further limited by the fact that respondents were not requested to furnish data, if the amount of the specified chemical purchased or received totaled less than \$5,000. The consumption information reported for the inorganic chemicals include materials used in producing other physical modifications of the same chemicals. Data shown in Table 7 of this report as well as in the one on Inorganic Chemicals (MC-28A) have been adjusted to exclude quantities so used.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the 'product mix' is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments classified in other industries.

## INDUSTRIAL ORGANIC CHEMICALS

28B-7

Table 1.—GENERAL STATISTICS FOR THE UNITED STATES: 1954 AND EARLIER YEARS

(For explanation of column captions see Introduction)

Industry and census year	Establishments, number	All employees		Production workers		Value added by manufacture <sup>2</sup> (\$1,000)	Cost of materials, etc. <sup>3</sup> (\$1,000)	Value of shipments <sup>4</sup> (\$1,000)

NA Not available.

<sup>1</sup>For the period 1949-1954, figures are based on employment for the payroll periods ended nearest the 15th of March, May, August and November. For 1947, they represent the average of 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the figure for all employees represents the sum of the annual average number of production workers and the number of nonproduction workers reported for one payroll period (usually in October).

<sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. See Introduction, "Value Added by Manufacture." For the "Synthetic fibers" industry, 1947 value added by manufacture does not equal the published value of shipments less cost of materials, etc. because an estimated value of production was used in the calculation in place of value of shipments. Since the 1949-1952 estimates were derived from 1947 base totals, the same inequality may exist for these years.

<sup>3</sup>Figures for years prior to 1935 do not include cost of contract work.

<sup>4</sup>For 1929 and 1947-1954, value of shipments; for all other years, value of production. See Introduction "Value of Shipments."

<sup>5</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. Estimates with a standard error in excess of 15 percent generally have been omitted from this table.

<sup>6</sup>No comparable figures are available for earlier years.

<sup>7</sup>The figures for 1939 are not entirely comparable with those for earlier years. Value added by manufacture for 1939 on a basis comparable with earlier years was \$37.1 million for "Plastics materials."

<sup>8</sup>No comparable figures are available for earlier years. There were no establishments engaged primarily in the manufacture of synthetic rubber in 1939.

<sup>9</sup>Excludes data for Government owned-privately operated plants which are included in the 1954 figures.

<sup>10</sup>The figures prior to 1937 are not sufficiently comparable with those for later years to be shown here because they exclude data for safety fuses and blasting and detonating caps.

## INDUSTRIAL ORGANIC CHEMICALS

28B-9

Table 2.—GENERAL STATISTICS BY REGIONS AND STATES: 1954 AND 1947

Note: Detailed figures may not add to the totals because of independent rounding.

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing States are not shown separately in the table (see INTRODUCTION "Confidentiality of Data for Individual Companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1954:

S.I.C. 2821, Cyclic (coal-tar) Crudes: Northeast—Maine, 1 (1-19); Massachusetts, 2 (20-99); Rhode Island, 1 (1-19); Connecticut, 1 (1-19); New York, 2 (20-99); New Jersey, 3 (250-499); Pennsylvania, 3 (20-99); North Central—Ohio, 7 (250-499); Indiana, 2 (20-99); Illinois, 4 (250-499); Michigan, 1 (20-99); Wisconsin, 1 (1-19); Minnesota, 2 (20-99); Missouri, 1 (1-19); South and West—Maryland, 1 (1-19); West Virginia, 2 (250-499); Tennessee, 1 (1-19); Alabama, 1 (20-99); Louisiana, 1 (20-99); Texas, 3 (20-99); Utah, 1 (20-99); Washington, 1 (1-19); California, 1 (20-99).

S.I.C. 2822, Intermediates, and Organic Colors: New England—Massachusetts, 6 (1,000-2,499); Rhode Island, 1 (20-99); Connecticut, 1 (20-99); East North Central—Indiana, 1 (100-249); Illinois, 3 (2,500-4,999); Michigan, 5 (7,249); South—Maryland, 1 (20-99); Virginia, 1 (20-99); North Carolina, 2 (250-499); South Carolina, 1 (20-99); Georgia, 1 (20-99); Tennessee, 1 (20-99); Alabama, 4 (500-999); Texas, 3 (1,327).

S.I.C. 2823, Plastic Materials: New England—New Hampshire, 1 (1-19); Rhode Island, 1 (1-19); Connecticut, 7 (500-999); North Central—Indiana, 3 (100-249); Michigan, 4 (2,520); Minnesota, 2 (20-99); Iowa, 2 (1,000-2,499); South—Delaware, 7 (500-999); Virginia, 2 (2,500-4,999); West Virginia, 1 (250-499); Florida, 1 (1-19); Kentucky, 3 (500-999); Alabama, 2 (20-99); Louisiana, 1 (20-99); Texas, 4 (1,440); Pacific—Washington, 4 (250-499); Oregon, 1 (20-99).

S.I.C. 2824, Synthetic Rubber: Northeast and North Central—Connecticut, 1 (250-499); New Jersey, 1 (100-249); Ohio, 3 (500-999); South and West—West Virginia, 14 (1,000-2,499); Kentucky, 2 (2,500-4,999); Mississippi, 1 (20-99); Louisiana, 4 (1,000-2,499); California, 1 (250-499).

S.I.C. 2825, Synthetic Fibers: Northeast and North Central—New Hampshire, 1 (20-99); Vermont, 2 (20-99); Massachusetts, 1 (250-499); Connecticut, 2 (250-499); New York, 2 (1,000-2,499); Pennsylvania, 3 (2,500-4,999); Ohio, 2 (1,000-2,499); Michigan, 1 (1-19); South Atlantic—Delaware, 2 (2,500-4,999); Maryland, 2 (1,000-2,499); West Virginia, 3 (2,500-4,999); North Carolina, 2 (5,000-9,999); South Carolina, 3 (3,063); Georgia, 1 (1,000-2,499); Florida, 1 (2,500-4,999); East South Central—Tennessee, 6 (14,846); Alabama, 3 (1,622).

S.I.C. 2826, Explosives: Northeast—Massachusetts, 1 (20-99); Connecticut, 1 (250-499); New York, 3 (500-999); New Jersey, 2 (1,000-2,499); Pennsylvania, 14 (1,000-2,499); East North Central—Indiana, 3 (4,007); Michigan, 3 (100-249); Wisconsin, 2 (2,500-4,999); West North Central—Missouri, 3 (500-999); Kansas, 2 (2,500-4,999); South—Maryland, 1 (1-19); Virginia, 2 (5,000-9,999); West Virginia, 2 (250-499); Kentucky, 1 (100-249); Tennessee, 2 (2,500-4,999); Alabama, 3 (500-999); Oklahoma, 1 (1-19); Texas, 3 (250-499); Mountain—Colorado, 2 (250-499); Arizona, 1 (250-499); Utah, 2 (100-249); Pacific—Oregon, 1 (1-19); California, 3 (250-499).

S.I.C. 2829, Organic Chemicals N.E.C.: New England—Maine, 2 (20-99); Rhode Island, 5 (100-249); Connecticut, 10 (1,575); North Central—Indiana, 2 (500-999); Wisconsin, 5 (100-249); Minnesota, 1 (20-99); Missouri, 2 (1,000-2,499); Nebraska, 2 (250-499); Kansas, 1 (1-19); South Atlantic—Delaware, 2 (250-499); Maryland, 6 (250-499); North Carolina, 5 (20-99); South Carolina, 2 (100-249); Florida, 1 (20-99); East South Central—Kentucky, 5 (500-999); Alabama, 4 (20-99); West South Central—Arkansas, 1 (100-249); Oklahoma, 2 (100-249); West—Nevada, 1 (20-99); Washington, 3 (20-99).

Electric motors driven by energy generated at the establishment.....do...	17	579	89	235	12

Note: Detailed figures may not add to the totals because of independent rounding.   xxx Not applicable.   NA Not available.   <sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.) Columns containing totals for establishments with 90% or more primary product specialization are shown only for those industries having a primary product specialization of less than 90%.   <sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry.   <sup>3</sup>Less than 500 tons.   <sup>4</sup>Less than \$5,000.   <sup>5</sup>Less than 500 thousand kwh.   <sup>6</sup>Less than \$500 thousand.   <sup>7</sup>Less than 500 hp.

## INDUSTRIAL ORGANIC CHEMICALS

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.)

<sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry.

<sup>3</sup>Separate figures for 1947 are not available for industries 2822 and 2829. The ratios in 1947 for the two industries combined were: specialization 81, coverage 86. Miscellaneous receipts figure includes value of explosives produced in Government-owned, privately-operated plants. Miscellaneous receipts figure has therefore been used both in the numerator and denominator of the specialization calculation.

Table 5B.--INDUSTRY-PRODUCT ANALYSIS--SHIPMENTS BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954

(In thousands of dollars. The first column shows the total value of shipments of the specified industry divided among: (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products) and (c) miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other Industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed. The last column shows the total value of shipments of the primary products of the industry by all manufacturing industries)

xxx Not applicable.

NA Not available.

D Withheld to avoid disclosing figures of individual companies.

<sup>1</sup>Represents values reported by tar distillers and excludes shipment values for tar, tar crudes and tar pitches reported by establishments classified in Industry 2932, Byproduct Coke Ovens, and Industry 2911, Petroleum Refining.<sup>2</sup>For quantity information refer to the United States Treasury Department, Internal Revenue Service.<sup>3</sup>Value of production.<sup>4</sup>Excludes shipments reported as rubbing alcohol (primary to Industry 2834) and as anti-freeze (primary to Industry 2899). The 1947 figures include an unspecified amount of denatured alcohol for such end uses.<sup>5</sup>Data for code 2829511, "Pesticides and other organic agricultural chemicals," not reported separately in 1947 but included in totals for code 2829211, "Miscellaneous cyclic chemicals," and code 2829311, "Miscellaneous acyclic chemicals."<sup>6</sup>Data for "Other bulk surface agents" not reported separately in 1947 but included in totals for "bulk surface agents, except sulfonated oils and fats, classified as a product primary to Industry 2842.<sup>7</sup>Codes 2823123, 2823125, and 2823139 combined with code 2823198, "Other cellulose plastics."<sup>8</sup>Excludes varnish, lacquer and dope materials as well as regenerated cellulosic products.<sup>9</sup>Code 2823311 combined with code 28236, "Plastics and resin materials, not elsewhere classified."<sup>10</sup>Includes amounts manufactured in establishments which produce resins as well as plants which purchase resins; also includes unspecified amounts made from reprocessed materials.<sup>11</sup>Vinyl sheetings of 6.0 mils are included with vinyl sheeting and film under six mils. Quantity figures converted from data reported originally in square yards.<sup>12</sup>Quantities reported on a "dry basis," defined as the total weight of the material including resins, plasticizers, fillers, extenders, colors, and stabilizers and excluding the weight of water, solvents, and other liquid diluents.<sup>13</sup>Code 2823511 combined with code 2823519, "Phenolic and other tar resins, other uses."<sup>14</sup>Quantities reported on a resin basis, except for safety glass sheeting, data for which are reported on "dry basis."<sup>15</sup>Code 2823531 combined with code 2823543, "Vinyl resins, other uses."<sup>16</sup>Codes 2823553 and 2823555 combined with code 2823575, "Other synthetic resins."<sup>17</sup>Code 2823500 combined with code 2823000, "Plastics materials, n.e.c."<sup>18</sup>Includes values reported for materials custom compounded from purchased resins and reprocessed regenerated cellulose.<sup>19</sup>Excludes data for polyvinyl type and non-vulcanizable elastomers, classified by respondents as plastics materials.<sup>20</sup>Revised; excludes value of cellulosic products such as sausage casings and sponges formerly considered as primary products of this industry but now classified as primary to Industries 2014, Sausage Casing, and 2823, Plastics Materials, respectively.<sup>21</sup>Codes 2825133, 2825141, 2825151, and 2825198 included in product class code 28251, "Acetate yarn."<sup>22</sup>Codes 2825233, 2825241, 2825251, 2825261, and 2825298 included in product class code 28252, "Rayon yarn."<sup>23</sup>Includes non-textile monofilaments, such as bristles sutures, and leaders.<sup>24</sup>According to the United States Bureau of Mines, 122,348,000 pounds of "permissibles" and 476,016,000 pounds of "high explosives, except permissibles" were sold for consumption in 1947.<sup>25</sup>Includes liquid oxygen and fuse powder.<sup>26</sup>Includes oil well shaped charges, rivets, lead wire, boosters, squibs, etc.<sup>27</sup>Includes military detonators, jet starters, fuse and explosive assemblies, etc.

Table 6B.—VALUE OF PRODUCT CLASSES SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, BY DIVISIONS AND STATES FOR 1954, AND UNITED STATES TOTALS FOR EARLIER YEARS

(In thousands of dollars. Shipments are shown for selected product classes which are economically significant and production of which is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (Table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are listed only if the value of shipments is more than \$1 million and the figure does not disclose individual company information. Additional States which had shipments of more than \$1 million of the individual product classes are listed in footnote 1.)

Product class, region, and State <sup>1</sup>	Value of shipments	Product class, region, and State <sup>1</sup>	Value of shipments	Product class, region, and State <sup>1</sup>	Value of shipments

xxx Not applicable.

NA Not available.

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>The 1947 figures exclude information for establishments primarily manufacturing regenerated cellulosic products, including cellophane, since these plants in 1947 were classified in Industry 2825, Synthetic Fibers.<sup>2</sup>215,306 thousand pounds of styrene consumed in 1947.<sup>3</sup>The 1947 figures include information for establishments primarily manufacturing regenerated cellulosic products, including cellophane, which are classified in 1954 in Industry 2823, Plastics Materials.<sup>4</sup>21,360 thousand pounds of glycerine consumed in 1947.

## INDUSTRIAL ORGANIC CHEMICALS

28B-23

Table 8.—GENERAL STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY SPECIALIZATION AND PRIMARY PRODUCT CLASS SPECIALIZATION, FOR THE UNITED STATES: 1954

(This table presents selected statistics for establishments classified according to their degree of specialization in products primary to the industry. The establishments are classified in two ways: (1) by industry specialization—the degree of specialization in all primary products of the industry; and (2) by product-class specialization—the degree of specialization in the largest product class of the establishment. The degree of "industry specialization" for an establishment represents the ratio of its primary product shipments to its total product shipments, primary and secondary. The degree of "product-class specialization" for an establishment represents the ratio of its largest product class shipments to its total product shipments, primary and secondary. Data are not shown for some industries, product classes, and specialization ranges for a variety of reasons, consequently, detailed figures frequently do not add to the totals. See Introduction for detailed explanation)

Ind. or product class No.	Industry or product class by percent of specialization	Estab- lish- ments, number	All employees		Production workers			Value added by manufacture	Cost of materials, etc.	Value of shipments

	All establishments specializing in product class.	63	7,831	39,815	5,210	10,587	23,431	99,933	126,284	226,218
	Establishments with:									
	90% or more specialization.....	30	796	4,038	557	1,025	2,142	14,688	11,949	26,638
	75-89% specialization.....	10	847	4,631	606	1,255	2,702	6,886	14,842	21,729
	50-74% specialization.....	16	2,162	10,307	1,425	2,970	6,342	29,041	45,193	74,235
	Less than 50% specialization.....	7	4,026	20,839	2,621	5,336	12,244	49,316	54,298	103,615
28296	Other industrial organic chemicals:									
	All establishments specializing in product class.	49	1,239	6,233	768	1,539	2,930	13,999	11,774	25,773
	Establishments with:									
	90% or more specialization.....	34	696	3,328	449	904	1,585	7,412	5,445	12,857
	75-89% specialization.....	6	186	955	115	243	495	2,556	1,675	4,231

<sup>1</sup>This class includes data for establishments with less than 50 percent specialization in the primary products of the industry and establishments engaged exclusively in contract work defined in the industry. Miscellaneous small statistical adjustments are also included.

<sup>2</sup>More than two-thirds of the employment and value of shipments accounted for by establishments whose specialization is less than 90 percent.

<sup>3</sup>Only an insignificant proportion contributed by establishments whose specialization is less than 90 percent.

# Drugs and Medicines

This report shows 1954 Census of Manufactures statistics for establishments classified in each of the following industries:

Code	Title
2831--	Biological Products
2833--	Medicinal Chemicals, including botanicals
2834--	Pharmaceutical Preparations

While there is a relatively large overlap in the shipments of products primary to each of the 4-digit industries in this group, the specialization ratios for the three digit group, Drugs and Medicines collectively is high. In 1954, shipments by plants in this group of industries consisted of 94 percent drugs and medicines, and only 6 percent of other chemical products. These plants also accounted for approximately 94 percent of the drugs and medicines produced in all manufacturing industries.

Although some duplication exists at the 3-digit level where the products of one industry (particularly Industry 2833) represent materials incorporated into the products of another industry, (particularly Industry 2834), this situation does not exist for 4-digit industry and product statistics. Product duplications are minimized by the separate industry classifications provided for plants primarily producing bulk medicines and for those primarily producing drug preparations. For example, plants primarily producing organic and inorganic medicinal chemicals and shipping these products in bulk, are classified in Industry 2833, Medicinal Chemicals; those buying drugs in bulk and compounding them into other pharmaceutical preparations are included in Industry 2834, Pharmaceutical Preparations.

Receipts for merchandising (products bought and resold without further manufacture or processing) valued at \$91 million (see Table 3) are excluded from the \$1,957 million value of shipments for Industry Group 283, Drugs and Medicines. Data relating to these merchandising receipts, arising principally from the resale of goods bought by manufacturers to supplement their line of manufactured drugs and medicines, are also excluded from the cost of materials and value added, but included in other detailed industry statistics, mainly employment and inventory.

The low ratio of production and related workers to total employment indicated for Drugs and Medicines results primarily from the following characteristics of this industry:

(a) Merchandising is an important activity and the employment data include a relatively large number of people engaged in packaging and selling.

(b) Research staffs are generally at the producing plants in Industry 2834, in contrast with the basic organic and inorganic chemical plants where such personnel are at laboratories located at different physical sites.

Data showing the distribution of industry shipments by class of customer appear in Table 9. Total distributed sales, as shown in this table, differ from the value of products shipped as shown in Tables 1, 2, 3, and 5 for three principal reasons:

(1) Receipts for contract work, scrap and refuse, research and development, etc., are included in the value of industry shipments but are excluded from the totals shown in Table 9.

(2) As indicated above, receipts for merchandising are excluded from the value of industry shipments but included in the Table 9 totals.

(3) A number of respondents were unable to analyze their sales by class of customer, and therefore the reported distributed shipments shown in Table 9 as a percentage of total shipments for the industry varies from 92 percent for Industry 2831 to 97 percent for Industry 2834.

## 2831--Biological Products

This industry comprises establishments primarily engaged in the production of viruses, serums, toxins, and analogous products such as allergenic extracts, and normal serums and plasmas for human or veterinary use. Establishments primarily engaged in manufacturing bacteriological media are also included in this industry. Excluded are the activities of the American Red Cross, hospitals and other institutions which are important collectors of blood and producers of blood products. For a detailed list of primary products of this industry, refer to Table 6A, product codes 2831011 to 2831059.

The value of shipments of Industry 2831, Biological Products, in 1954 totaled \$61 million. This included shipments of primary products (biological products) valued at \$52 million, shipments of secondary products valued at \$8 million, and miscellaneous receipts of less than \$1 million.

Industry 2831 shipments of biological products in 1954 represented 86 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 87 percent. Secondary products shipped by this industry in 1954 consisted mainly of veterinary drug preparations, \$3 million; and drug preparations for human use, \$3 million.

Industry 2831 shipments of biological products in 1954 represented 65 percent of these products valued at \$80 million shipped by all industries. In 1947, this coverage ratio was 57 percent. The low coverage ratio is due primarily to the production of biological products for human use as secondary products by establishments primarily engaged in manufacturing pharmaceutical preparations and classified in Industry 2834. In 1954, Industry 2834 shipments of biological products were valued at \$27 million, or 33 percent of the shipments by all industries.

The establishments classified in Industry 2831 generally are licensed by the Department of Agriculture and limit their activities to specific types of vaccines and serums utilizing a "batch lot" technique.

2833--Medicinal Chemicals, including Botanicals (Full Standard Industrial Classification Number and Title: 2832, Botanical Products, and 2833, Inorganic and Organic Medicinal Chemicals)

This industry comprises establishments primarily engaged in manufacturing bulk organic and inorganic medicinal chemicals and their derivatives as well as establishments engaged in grading, grinding and milling botanical drugs and herbs. Establishments primarily engaged in manufacturing endocrine products, manufacturing or isolating basic vitamins, isolating active medicinal principles such as alkaloids from botanical drugs and herbs and manufacturing agar-agar (except culture media) are also included in this industry. Establishments primarily engaged in manufacturing reagent and chemically pure grades (other than United States Pharmacopoeia or National Formulary) of inorganic and organic chemicals are classified in Industries 2819, Inorganic Chemicals, Not Elsewhere Classified, and 2829, Organic Chemicals, Not Elsewhere Classified, respectively. For a detailed list of primary products of Industry 2833, refer to Table 6A, product codes 2832011 to 2833298.

The value of shipments of Industry 2833, Medicinal Chemicals, (including botanicals) in 1954 totaled about \$253 million. This included shipments of primary products, (bulk drugs of animal origin, bulk organic and inorganic medicinal chemicals and botanicals) valued at \$168 million, shipments of secondary products valued at \$75 million, and miscellaneous receipts of \$10 million.

Industry 2833 shipments of medicinal chemicals (primary products) in 1954 represented 69 percent of its total product shipments (primary and secondary). In 1947, this primary

product specialization ratio was 73 percent. Secondary products shipped by this industry in 1954 consisted mainly of pharmaceutical preparations for human use, \$21 million; industrial organic chemicals, \$14 million; industrial inorganic chemicals, \$8 million; and cyclic (coal tar) intermediates, \$4 million.

Industry 2833 shipments of medicinal chemicals in 1954 represented 59 percent of these products valued at \$282 million shipped by all industries. In 1947, this coverage ratio was 74 percent. It should be noted that these coverage ratios are based on shipments rather than production. Plants in Industry 2834 and, to some extent Industry 2831, produce medicinal chemicals for incorporation in drug preparations; however, since production data were not compiled, no measure of the captive production is available. Other industries producing medicinal chemicals for sale or interplant transfer in 1954 were mainly Industry 2829, Industrial Organic Chemicals, N.E.C., \$16 million, Industry 2822, Intermediates and Organic Colors, \$30 million and Industry 2834, Pharmaceutical Preparations, \$42 million.

Many medicinal chemicals are produced in batch lots. This characteristic is reflected in the statistics which show that 92 plants, or 80 percent of the total number of establishments, employ fewer than 50 employees. These plants account for 10 percent of the total employment and 8 percent of the value added by manufacture. On the other hand, with the growth of antibiotics and other medicinal chemicals produced by fermentation or otherwise requiring large capital outlays and specialized equipment, continuous process operations have been introduced within the past two decades. Some of the products primary to Industry 2833 are produced by more than one process, such as cortisone which may be produced synthetically by two or more processes or by fermentation. The effect of varying processing techniques on the ratio of cost of materials to net shipments does not have a significant effect on the value added per employee for the larger or smaller plants. The value added per employee for plants employing fewer than 20 employees is approximately \$12,000, or the same as that for plants with 250 or more employees.

The data collected by the United States Tariff Commission and Census Bureau for bulk medicinal organic chemicals complement each other. Those of the Census Bureau represent information for plants classified in manufacturing industries and provide a total value for these chemicals in the form actually shipped; those of the Tariff Commission represent company sales and provide more detailed product information.

The Census Bureau figure of \$152 million is considerably less than the \$426 million reported to the U. S. Tariff Commission for bulk medicinal organic chemicals, primarily for the following reasons:

(1) The Census Bureau total for product line 2833281, Synthetic organic medicinal chemicals in bulk (uncompounded) excludes data for certain uncompounded bulk derivatives, antibiotics and bulk vitamins, which are included in the Tariff Commission figure for medicinal organic chemicals. These items are included in other product categories in this industry by the Census Bureau.

(2) Sales figures reported to the Tariff Commission represent the values of medicinal organic chemicals whether shipped in bulk or packaged, and except for antibiotics, include sales of these products in tablets or ampules when sold in undiluted or uncompounded form. Medicinal organic chemicals sold in dosage form (tablets, ampules, etc.) were reported to the Census Bureau as pharmaceutical preparations.

(3) The distinctions between natural organic medicinal chemicals and synthetic compounds were not uniformly followed in the reports to the two agencies.

(4) Coverage of reporting establishments also contributes to the difference. The Tariff Commission secures product data from laboratories, whereas these establishments are excluded from the Census totals. On the other hand, the Census totals include reports for a few plants which did not report to the Tariff Commission.

(5) The Census Bureau reports require dollar evaluations for interplant transfers even when the products so shipped are entirely consumed by other plants of the same company. Since "company reports" are made to the Tariff Commission, this transfer value is not reported.

#### 2834--Pharmaceutical Preparations

This industry comprises establishments primarily engaged in fabricating drugs and medicines in pharmaceutical preparations such as ampules, tablets, capsules, ointments, solutions, and suspensions, for human and veterinary use, including vitamin preparations and Galenicals such as fluid extracts and tinctures. Products of this industry consist of two important lines: (a) pharmaceutical preparations promoted primarily to the dental, medical, or veterinary professions, and (b) pharmaceutical preparations promoted primarily to the public. Establishments compounding drugs and medicines and selling these "over the counter" are classified in Trade industries and thus are excluded from the Census of Manufactures. For a detailed list of primary products of Industry 2834 refer to Table 6A, product codes 2834111 to 2834689.

The value of shipments of Industry 2834, Pharmaceutical Preparations, in 1954 totaled \$1,643 million. This included shipments of primary products (pharmaceutical preparations for human and veterinary use) valued at \$1,495 million, shipments of secondary products valued at \$144 million, and miscellaneous receipts of \$4 million.

Industry 2834 shipments of pharmaceutical preparations in 1954 represented 91 percent of its total product shipments (primary and secondary), which is the same primary specialization ratio as for 1947. Secondary products shipped by this industry in 1954 consisted mainly of biological products, \$27 million; medicinal drugs and medicines, \$45 million; perfumes, cosmetics and toilet preparations, \$29 million; surgical and medical instruments, \$6 million; and chemical specialties, \$4 million.

Industry 2834 shipments of pharmaceutical preparations in 1954 represented 94 percent of these products valued at \$1,585 million shipped by all industries. In 1947, this coverage ratio was 98 percent. Other industries shipping pharmaceutical preparations were mainly Industry 2833, Inorganic and Organic Medicinal Chemicals, \$27 million, and Industry 2893, Perfumes, Cosmetics, and Toilet Preparations, \$22 million.

The products of this industry are also classified either as ethical or proprietary preparations based largely on the promotional techniques employed by drug firms. While ethical preparations are products primarily advertised or otherwise promoted to or prescribed by the medical profession, some are also available to consumers who are familiar, because of purchase by prescription or otherwise, with the products' name. On the other hand, proprietary preparations are products primarily advertised or otherwise promoted to the general public and may be purchased over-the-counter by anyone.

Although most companies show shipments of products only as ethical or proprietary, a number indicate shipments in both categories. Generally, the "ethical" firms have greater diversification of products and have staffs detailed to sell the product to the physician. The employment figures for Industry 2834 are believed to exclude the sales force engaged in such specialized selling. Since 1947, the sales of ethical products have increased faster and have a larger proportion of the market largely because of the increasing use of such products as antibiotics, antihistamines, sulfonamides, vitamins, and endocrines, some of which are now being produced by continuous process manufacturing methods.

Since specialized equipment or relatively large investments in capital are not prerequisites for many products primary to the industry, the industry is characterized by the presence of a relatively large number of small firms. In 1947, approximately 61 percent of the 1,163 establishments classified in this industry had fewer than 10 employees, and in 1954 the comparable percentage is 62 percent.

Measures of some of the important products which have developed in recent years have been provided in the statistics shown in Table 6A, Value of Products Shipped. Since some of these products are only of recent economic importance, no

comparable 1947 data are available for such products as anti-histamines, dietary depressants (reducing preparations), dietary supplements, hematinics, hormone preparations, and hypnotics and sedatives.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments classified in other industries.

## MANUFACTURES--INDUSTRY STATISTICS

Table 1.--GENERAL STATISTICS FOR THE UNITED STATES: 1954 AND EARLIER YEARS

(For explanation of column captions see Introduction)

Industry and census year	Establishments, number	All employees		Production workers		Value added by manufacture <sup>2</sup> (\$1,000)	Cost of materials, etc. <sup>3</sup> (\$1,000)	Value of shipments <sup>4</sup> (\$1,000)

1929 <sup>8</sup> .....	1,392	35,460	58,727	24,518	27,965	268,444	118,185	386,629

NA Not available.

<sup>1</sup>For the period 1949-1954, figures are based on employment for the payroll periods ended nearest the 15th of March, May, August and November. For 1947, they represent the average of 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the figure for all employees represents the sum of the annual average number of production workers and the number of nonproduction workers reported for one payroll period (usually in October).

<sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. See Introduction, "Value Added by Manufacture."

<sup>3</sup>Figures for years prior to 1935 do not include cost of contract work.

<sup>4</sup>For 1929 and 1947-1954, value of shipments; for all other years, value of production. See Introduction, "Value of Shipments."

<sup>5</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. Estimates with a standard error in excess of 15 percent generally have been omitted from this table.

<sup>6</sup>The figures for 1939 are not entirely comparable with those for earlier years. Value added by manufacture for 1939 on a basis comparable with earlier years was \$249.7 million for "Pharmaceutical preparations." No comparable figures are available for "Biological products," and "Medicinal chemicals inc. botanicals" prior to 1939.

<sup>7</sup>The number of establishments primarily engaged in grading, grinding and milling botanical drugs and herbs was so few that the statistics for these establishments were combined with those for the medicinal chemicals industry.

<sup>8</sup>"Pharmaceutical preparations" was formerly included in the discontinued industries, "Druggists preparations," "Patent or proprietary medicines and compounds," and "Drug grinding." Separate figures are not available prior to 1929.

Table 2.—GENERAL STATISTICS BY REGIONS AND STATES: 1954 AND 1947

Note: Detailed figures may not add to the totals because of independent rounding.

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing States are not shown separately in the table (see INTRODUCTION "Confidentiality of Data for Individual Companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1954:

S.I.C. 2831, Biological Products: Northeast—Connecticut, 1 (1-19); Pennsylvania, 4 (500-999); East North Central—Ohio, 3 (20-99); Michigan, 2 (100-249); Wisconsin, 3 (100-249); West North Central—Minnesota, 1 (1-19); Iowa, 4 (250-499); Missouri, 5 (100-249); South—Maryland, 2 (20-99); Virginia, 1 (1-19); Georgia, 2 (1-19); Florida, 2 (20-99); Arkansas, 2 (1-19); Oklahoma, 1 (1-19); Texas, 6 (20-99); West—Colorado, 2 (20-99); Washington, 1 (20-99); Oregon, 1 (1-19).

S.I.C. 2832, Medicinal Chemicals, Inc. Botanicals: Northeast—Massachusetts, 2 (20-99); Connecticut, 3 (1,094); Pennsylvania, 5 (1,010); East North Central—Ohio, 4 (1-19); Michigan, 2 (20-99); Wisconsin, 1 (1-19); West North Central—Minnesota, 2 (1-19); Iowa, 1 (100-249); Missouri, 2 (1,000-2,499); South and West—Delaware, 1 (1-19); Virginia, 3 (500-999); South Carolina, 1 (1-19); Georgia, 1 (20-99); Texas, 2 (20-99); Colorado, 1 (1-19); Washington, 3 (20-99).

S.I.C. 2834, Pharmaceutical Preparations: Northeast—Maine, 1 (1-19); New Hampshire, 2 (20-99); Vermont, 3 (20-99); Massachusetts, 41 (1,000-2,499); Rhode Island, 4 (20-99); Connecticut, 15 (500-999); Pennsylvania, 101 (6,542); West North Central—Minnesota, 23 (100-249); South Dakota, 1 (1-19); Kansas, 6 (20-99); South Atlantic—Delaware, 3 (1-19); Maryland, 23 (500-999); District of Columbia, 4 (20-99); Virginia, 20 (500-999); West Virginia, 6 (100-249); South Carolina, 5 (20-99); Georgia, 15 (100-249); Florida, 13 (20-99); East South Central—Kentucky, 7 (20-99); Alabama, 4 (1-19); West South Central—Arkansas, 3 (1-19); Oklahoma, 3 (1-19); West—Arizona, 1 (1-19); Utah, 1 (1-19); Oregon, 7 (20-99).

## MANUFACTURES--INDUSTRY STATISTICS

Table 3.—DETAILED STATISTICS FOR THE UNITED STATES: 1954

(For explanation of line captions see Introduction)

Engines, etc. not driving electric generators.....do..	( <sup>5</sup> )	...	4	3	13
Electric motors driven by purchased energy.....do..	9	7	74	29	184
Electric motors driven by energy generated at the establishment.....do..	...	...	( <sup>5</sup> )	...	3

Note: Detailed figures may not add to the totals because of independent rounding.

NA Not available. xxx Not applicable. <sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.) Columns containing totals for establishments with 90% or more primary product specialization are shown only for those industries having a primary product specialization of less than 90%. <sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry. <sup>3</sup>Less than 500 tons. <sup>4</sup>Less than \$500 thousand. <sup>5</sup>Less than 500 hp.

DRUGS AND MEDICINES

28C-7

Table 4.--SELECTED STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY EMPLOYMENT SIZE, FOR THE UNITED STATES: 1954

(Value figures in thousands of dollars. For explanation of line captions see Introduction. Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted and the combined figure is underlined and shown in the size-class to the left)

Note: Detailed figures may not add to the totals because of independent rounding.

Table 5A.--INDUSTRY-PRODUCT ANALYSIS--SUMMARY OF INDUSTRY AND PRIMARY PRODUCT SHIPMENTS, SPECIALIZATION RATIOS AND COVERAGE RATIOS FOR THE UNITED STATES: 1954 AND 1947

Industry code	Industry and census year	Value of shipments					Value of primary products shipped			
		Total	Primary products	Secondary products	Miscel- laneous receipts	Primary product speciali- zation ratio <sup>1</sup>	Total (made in all industries)	Made in this industry	Made in other industries	Coverage ratio <sup>2</sup>
						Col. B Col. B+C (Percent)				Col. G Col. F (Percent)
		(\$1,000) (A)	(\$1,000) (B)	(\$1,000) (C)	(\$1,000) (D)	(E)	(\$1,000) (F)	(\$1,000) (G)	(\$1,000) (H)	(I)
2831	Biological products.....1954.. 1947..	60,973 37,737	52,261 32,029	8,215 4,850	497 858	86 87	79,909 56,397	52,261 32,029	27,648 24,368	65 57
2833	Medicinal chemicals, including botanicals.....1954.. 1947..	252,478 218,156	167,687 156,393	75,038 59,009	9,753 2,754	69 73	282,071 210,184	167,687 156,393	114,384 53,791	59 74
2834	Pharmaceutical preparations..1954.. 1947..	1,643,140 941,290	1,494,873 846,430	144,380 86,040	3,887 8,820	91 91	1,584,692 867,106	1,494,873 846,430	89,819 20,676	94 98

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.)

<sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry.

## MANUFACTURES--INDUSTRY STATISTICS

Table 5B.--INDUSTRY-PRODUCT ANALYSIS--SHIPMENTS BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954

(In thousands of dollars. Each column shows for the industry listed in the column heading, the value of shipments divided between drugs and medicines, other products, and miscellaneous receipts. Each figure represents the amount of the product class shown at the left shipped by the industry listed at the top of the column. The first four digits of the product class codes at the left represent the codes of the industries to which they are primary. All other product classes in a column represent products secondary to the specified industry)

Prod. class code	Class of products and miscellaneous receipts	Biological products (S.I.C. 2831)	Medicinal chemicals, including botanicals (S.I.C. 2833)	Pharmaceutical preparations (S.I.C. 2834)	Toilet preparations (S.I.C. 2893)	Other industries	All industries

xxx Not applicable.

D Withheld to avoid disclosure of figures for individual companies.

<sup>1</sup>Includes \$30,441,000 shipped by establishments classified in Industry 2822, Intermediates and Organic colors; and \$15,908,000 by establishments classified in Industry 2829, Organic Chemicals, N.E.C.

<sup>2</sup>Included in other secondary products to avoid disclosure of figures for individual companies.

<sup>3</sup>Less than \$100 thousand.

<sup>4</sup>Of this figure, 65 percent consists of the following product classes: 20424, Other prepared animal feeds; 20942, Other starch, including reprocessed; and 28195, Other potassium and sodium compounds.

<sup>5</sup>Of this figure, 85 percent consists of the following product classes: 20716, Other candy and confectionery; 20951, Flavoring extracts, emulsions and other flavors; 28293, Miscellaneous acrylic chemicals; 28931, Perfumes, toilet waters and colognes; and 28942, Gelatin, except ready-to-mix desserts.

xxx Not applicable.

NA Not available.

<sup>1</sup>Includes interplant transfers which amount to less than 5 percent of total shipments and less than 10 percent for any one product and excludes biologicals manufactured by State Health Agencies.<sup>2</sup>Codes 2833111 combined with code 2833119, "Miscellaneous endocrine glands," in 1947.<sup>3</sup>Excludes data for enzymes, classified as primary to Industry 2829, Industrial Organic Chemicals.<sup>4</sup>Code 2833213 combined with code 2833219, "Other alkaloids and salts."<sup>5</sup>Code 2833221 combined with code 2833241, "Botanical derivatives, uncombined, n.e.c."<sup>6</sup>For additional data, see product code 2819611, "Reagent and high purity grades of inorganic chemicals refined from purchased technical grades."<sup>7</sup>The total includes \$44,555 thousand in 1954 and \$12,057 thousand in 1947 which was unspecified by kind, therefore, not included in the totals for ethical and proprietary preparations for the 4- and 5-digit product codes.<sup>8</sup>"Ethical preparations" are defined as products primarily advertised or otherwise promoted to or prescribed by the medical profession.<sup>9</sup>"Proprietary preparations" are defined as products primarily advertised or otherwise promoted to the general public.<sup>10</sup>The detailed 1947 data for ethical preparations for the 5-digit product codes are not directly comparable in some instances with the 1954 product classifications. Of the \$526,430 thousand reported in 1947 for ethical preparations, \$239,411 thousand can not be distributed according to the 1954 detailed product classifications.<sup>11</sup>Data for "Penicillin in preparation with other active agents" included in figures for "Penicillin in preparation without other active agents," by respective forms.<sup>12</sup>Includes data for tablets, pills, capsules, lozenges, and other solid forms.<sup>13</sup>Data for streptomycin preparations included in figures for "Other antibiotic preparations."<sup>14</sup>Included in total for "Pharmaceutical preparations, not specified by kind."<sup>15</sup>Cough drops selling at retail for 10% or less per package are coded as primary to Industry 2071, "Confectionary products." The 1954 total for this product is \$29,874 thousand compared with the 1947 figure of \$8,528 thousand.<sup>16</sup>Inhaler tubes are included with "All other cough and cold products."<sup>17</sup>Included in total for "Other pharmaceutical preparations for human use."<sup>18</sup>Data for parenteral preparations included in total for "Sulfonamides, other forms."<sup>19</sup>Because some respondents reported these products as mouthwashes (product code 2893398) in 1947, comparable data may be obtained by adding \$6,177 for mouthwashes to the 1954 and \$13,657 thousand to the 1947 figure for proprietary liquid antiseptics.

Table 6B.—VALUE OF PRODUCT CLASSES SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, BY DIVISIONS AND STATES FOR 1954, AND UNITED STATES TOTALS FOR EARLIER YEARS

(In thousands of dollars. Statistics are shown for selected product classes which are economically significant and production of which is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (Table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are listed only if the value of shipments is more than \$1 million and the figure does not disclose individual company information. Additional States which had shipments of more than \$1 million of the individual product classes are listed in footnote 1)

Note: The figures shown for 1950 to 1953 are sample estimates obtained from the Annual Survey of Manufactures for those years. Since the estimates are based on a sample they are subject to sampling variability, that is, they are not the same as figures which would have been obtained if complete censuses had been taken for those years. Measures of the sampling variability (standard errors) of the estimated total value of shipments of each product class are shown in the Annual Survey of Manufactures publications. Also shown are the standard errors of the relative change in shipments between some consecutive Annual Survey years which are the more significant measures when the series is studied for trend.

<sup>1</sup>For the specified product classes, shipments of over \$1 million were reported for the States listed but the exact figures are withheld to avoid disclosure of individual company figures: 28310, New Jersey, Missouri, and Maryland; 28332, Connecticut, Pennsylvania, Ohio, Iowa, Missouri, Virginia, West Virginia, and Georgia; 28341, New Jersey; 28342, New Jersey, Indiana, and Illinois; 28343, Massachusetts, Maryland, North Carolina, Georgia, and Tennessee; 28344, Massachusetts, Connecticut, Ohio, Indiana, Tennessee, and Mississippi; 28346, Rhode Island, Connecticut, Minnesota, Nebraska, West Virginia, Tennessee, Mississippi, and Arkansas.

<sup>2</sup>Includes \$669 thousand for the Western region.

Table 8.—GENERAL STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY SPECIALIZATION AND PRIMARY PRODUCT CLASS SPECIALIZATION, FOR THE UNITED STATES: 1954

(This table presents selected statistics for establishments classified according to their degree of specialization in products primary to the industry. The establishments are classified in two ways: (1) by industry specialization—the degree of specialization in all primary products of the industry; and (2) by product-class specialization—the degree of specialization in the largest product class of the establishment. The degree of "industry specialization" for an establishment represents the ratio of its primary product shipments to its total product shipments, primary and secondary. The degree of "product-class specialization" for an establishment represents the ratio of its largest product class shipments to its total product shipments, primary and secondary. Data are not shown for some industries, product classes, and specialization ranges for a variety of reasons, consequently, detailed figures frequently do not add to the totals. See Introduction for detailed explanation)

Ind. or product class No.	Industry or product class by percent of specialization	Establishments, number	All employees		Production workers			Value added by manufacture (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments (\$1,000)

<sup>1</sup>This class includes data for establishments with less than 50% specialization in the primary products of the industry and establishments engaged exclusively in contract work defined in the industry. Miscellaneous small statistical adjustments are also included.

<sup>2</sup>Over 80 percent of the value of products shipped was by establishments specializing between 50-75 percent of this product class.

## MANUFACTURES--INDUSTRY STATISTICS

TABLE 9.—VALUE OF SHIPMENTS FOR SELECTED INDUSTRIES, BY CLASS OF CUSTOMER; 1954

Item	Shipments including interplant transfers <sup>1</sup>					
	Biological products, Industry 2831		Medicinal chemicals, inc. botanicals, Industry 2833		Pharmaceutical preparations, Industry 2834

Shipments to others (including samples).....			257	...	4,373	...

<sup>1</sup>Represents total value of primary and secondary products, includes resales but excludes receipts for contract work, scrap, research and develop-  
ment work by establishments classified in specified industries.

# Soap, Glycerin, Cleaning, Polishing, and Related Products

This report shows 1954 Census of Manufactures statistics for establishments classified into each of the following industries:

Code	Title
2841--	Soap and Glycerin
2842--	Cleaning and Polishing Products
2843--	Sulfonated Oils and Assistants

In classifying establishments included in this group, distinction was made between manufacturers of soap products producing from fats and alkalis, and those producing from purchased soap (soap converters). The former were included in Industry 2841, Soap and Glycerin; whereas those who made soap products from purchased soap were classified either in Industry 2842, Cleaning and Polishing Products or, in Industry 2893, Toilet Preparations.

Since 1947, soap sales have declined by more than 50 percent, while 1954 sales of synthetic detergents have increased about five fold. This trend is also reflected in the activities of the plants classified in Industries 2841 and 2842, regardless of the fact that the former industry includes only those establishments operating soap kettles. As indicated in Table 5B, Industry-Product Analysis, during 1954 plants classified in Industry 2841 shipped \$343 million of soap and soap products and \$443 million of synthetic organic and alkaline detergents. These plants accounted for 68 percent of the total bulk and packaged synthetic organic detergents shipped by all manufacturing industries. In 1947, plants classified in Industry 2841, shipped soap and soap products totaling \$800 million and synthetic detergents of less than \$108 million.

While commodity data for cleaning preparations, known as synthetic organic detergents, were compiled, no attempt was made to secure commodity detail for bulk surface active agents, as reported to the United States Tariff Commission. Establishments reporting to the Bureau of the Census furnished dollar values for all bulk surface active agents, distinguishing between those primarily used for detergent purposes and those for other purposes. For sulfated and sulfonated oils, fats and waxes, quantities shipped were also reported to the Bureau of the Census. As indicated in the table below, the dollar values reported to the Bureau of the Census differ from those reported to the United States Tariff Commission as follows:

## SHIPMENTS OF BULK SURFACE ACTIVE AGENTS

(In thousands of dollars)

Code	Product	Reported to--	
		Census Bureau	Tariff Commission
	Total.....	130,220	196,433
2843011	Sulfonated oils and fats.....	23,852	6,787
2842271	Other bulk surface agents primarily for detergent purposes.....	51,616	189,646
2829471	Emulsifiers, wetting agents, penetrants, etc.....	54,752	

The Census total for bulk surface active agents is less than the figure published by the United States Tariff Commission partly because of reporting differences. The Census classification system distinguishes between the chemical shipped as such, as well as among the finished products into which these

chemicals are incorporated, such as packaged or bulk synthetic detergents, shampoos, dentifrices, leather or textile softeners and assistants, wetting agents for agricultural, insecticidal, and fungicidal preparations or quaternary ammonium compounds. Thus, sizeable amounts, which were reported to the Tariff Commission as bulk surface active agents, were reported to the Census Bureau as finished packaged detergents or other chemical specialty products.

In addition, the totals for each of these specific groups of bulk surface products differ because the census reports requested that product data be reported separately for bulk surface active agents on the basis of end use rather than by chemical composition. For example, product distinctions were made between bulk surface active agents used mainly for detergent purposes (primary to Industry 2842) and other bulk surface active agents such as emulsifiers, penetrants, etc. (primary to Industry 2829, Industrial Inorganic Chemicals, N.E.C.), rather than on the basis of whether they were cyclic or acyclic. The census figures also include data for additives, diluents, processing and packaging, whereas the Tariff Commission data are stated in terms of 100% active material. In addition, the Bureau of the Census required dollar evaluations for interplant transfers even when the products so shipped were entirely consumed by other plants of the same company. In reporting to the Tariff Commission, this transfer may not be reported as a sale, although the Commission requires that production be reported whether the products are consumed in the same plant or not.

Other principal causes for the differences are due to "coverage". Sulfonated oils and fats as defined by the Tariff Commission are limited to sulfonates of animal, vegetable, and marine origin; whereas the census definition includes these products as well as the sulfonated acids, amides, and esters. Lastly, the census totals include reports for some companies which did not report to the Tariff Commission.

## 2841--Soap and Glycerin

Industry 2841, Soap and Glycerin, comprises establishments primarily engaged in manufacturing soap in any form (including shampoos and shaving creams) and in manufacturing crude and refined glycerin. Establishments primarily engaged in manufacturing washing powders and compounds and not engaged in manufacturing soap (soap converters) are classified in Industry 2842, Cleaning and Polishing Products; shampoos and shaving creams from purchased soap, in Industry 2893, Toilet Preparations; and metal soap pads in Industry 3291, Abrasive Products.

All establishments which produce soap in kettles located in the same establishment are classified in Industry 2841, except those for which the primary products are metal soap pads or steel wool (codes 391231-55). Hence, the list of products primary to Industry 2841, include not only product codes 2841111 to 2841451, but also include the detergents shown in product class codes 28421 and 28422.

The value of shipments of Industry 2841, Soap and Glycerin in 1954 totaled \$960 million. This included shipments of soap and synthetic organic detergents (primary products) valued at \$802 million, shipments of secondary products valued at \$157 million, and miscellaneous receipts of \$1 million.

Industry 2841 shipments of primary products (soap and glycerin and bulk and packaged synthetic organic detergents) in 1954 represented 84 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 81 percent. Secondary products shipped by this industry in 1954 consisted mainly of alkaline detergents, \$14 million; toilet preparations, \$100 million; specialty detergents, \$21 million; and chemical specialties, \$3 million.

Industry 2841 shipments of soap and glycerin in 1954 represented 74 percent of the soap, glycerin, and synthetic organic detergents valued at \$1,077 shipped by all industries. This

coverage ratio in 1947 was 91 percent. Plants in other industries manufacturing soap products represented those manufacturing the products from purchased soap. They consisted mainly of soap converters, Industry 2842, Cleaning and Polishing Products; and establishments manufacturing shaving creams and soaps, Industry 2893, Toilet Preparations.

Although all establishments classified in Industry 2841 reported that the soap or soap products manufactured by them were produced in soap kettles located in the reporting establishment, marked variations in size of plant may be noted. Generally, plants specializing in the manufacture of liquid soaps are relatively small since these soaps are made in batch operations by the "cold-made" process in contrast to the more continuous processes, particularly the "full boiled" process used for making the "sodium" soaps. In the latter process, glycerin is recovered as a byproduct.

In Table 6A, no distinction is made between soap products made by prime soap manufacturers and by establishments which purchase and convert soap to soap products (soap converters). The dollar value of soap products shipped by soap converters are the totals shown as shipped by industries other than Industry 2841 appearing in Table 5B.

In addition, a measure of the quantity of soap produced by prime producers may be derived from the information shown in Table 7, where the quantities of soap purchased are shown. Data relating to shampoos and brushless shaving creams are shown among the commodity statistics for Industry 2893, Toilet Preparations.

Data showing monthly production, consumption and stocks at the end of month for glycerin are also published in the Census Facts for Industry Series M17-1, Animal and Vegetable Fats and Oils. The data for production appearing in this report differ slightly from those appearing in the current survey. Respondents were not requested to report the quantities of fats and oils consumed in the manufacture of soap since such information is reported monthly and appears in the Census Facts for Industry Series M17-2, Fats and Oils, Consumption by End Uses. Although separate data were also not requested for other raw materials such as rosin, essential oils, and pigments, data are shown in Table 7 for several sodium phosphate compounds, principally used as "builders" (additives whose purpose is to improve the detergency of the mixture).

#### 2842--Cleaning and Polishing Products

Industry 2842, Cleaning and Polishing Products, comprises establishments primarily engaged in manufacturing cleansers, washing powders and washing compounds and which are not engaged in manufacturing soap. Establishments primarily engaged in manufacturing dry-cleaning preparations, metal, automobile, stove, shoe, and other polishes; paint and varnish removers; waxes, stains, finishes, and dressings for fabricated leather and other materials; burnishing inks, and related products are also included in this industry. Establishments primarily engaged in manufacturing soap are classified in Industry 2841, Soap and Glycerin; bluing, laundry soaps, water softeners and other chemical specialties in Industry 2899, Chemical Products, Not Elsewhere Classified; and metal soap pads in Industry 3291, Abrasive Products. For a detailed list of primary products of Industry 2842, refer to Table 6A product codes 2842111 to 2842555, as well as product codes 2841111 to 2841198, 2841211 to 2841298, and 2841311.

The value of shipments of Industry 2842 in 1954 totaled \$560 million. This included shipments of primary products (cleaning and polishing preparations) valued at \$447 million, shipments of secondary products valued at \$110 million, and miscellaneous receipts \$3 million.

Receipts for merchandising (products bought and resold without further manufacture or processing) valued at \$47 million are excluded from the \$560 million value of shipments of Industry 2842. Data relating to these merchandising receipts are also excluded from the cost of materials and value added by manufacture, but these activities are reflected in other detailed industry statistics, mainly employment and inventory.

Industry 2842 shipments of cleaning and polishing preparations in 1954 represented 80 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 70 percent. Secondary products shipped by this industry in 1954 consisted mainly of chemical specialties, \$19 million; organic chemicals, \$5 million; and household insecticides and repellents, \$6 million.

Industry 2842 shipments of cleaning and polishing preparations in 1954 represented 45 percent of those products valued at \$998 million shipped by all industries. This coverage ratio in 1947 was 52 percent. For reasons indicated above, a considerable proportion (\$398 million) of packaged synthetic organic detergents are shipped by plants classified in Industry 2841, Soap and Glycerin; bulk surface active agents, (\$18 million) by plants classified in Industry 2829, Organic Chemicals, N.E.C.; and alkaline detergents, by plants classified in Industry 2812, Alkalies and Chlorine. Polishing and related products are also made by plants primarily engaged in manufacturing other chemical specialties, Industry 2899.

Establishments primarily packaging and merchandising cleaning and polishing products and also incidentally engaged in manufacturing some of these products are classified in Trade Industries (1954 Census of Business). No measure of the manufacturing activities performed by such establishments are available.

Table 8 indicates that plants classified in Industry 2842 limit their activities to a relatively small range of products classified as primary to this industry. The product range is frequently narrower than those included in the product classes. For example, a considerable number of plants specialize in the manufacture of polishing preparations. Within this product grouping there is further specialization as, for example, firms engaged in manufacturing floor polishes generally do not manufacture shoe polishes.

The data appearing in Table 7 are primarily limited to the materials consumed in soap and synthetic organic and alkaline detergents. These quantities purchased and incorporated into synthetic organic detergent mixtures provide a partial measure of the net quantities shipped to other industries. No measures of the quantities produced and consumed, however, are available.

#### 2843--Sulfonated Oils and Assistants

Industry 2843, Sulfonated Oils and Assistants, comprises establishments primarily engaged in producing sulfonated oils and fats and related products such as tanning assistants, softeners, and soluble oils and greases. Establishments primarily engaged in manufacturing petroleum sulfonates and "other assistants" such as egg yolks, wetting agent preparations, waterproofing emulsions and mordants, are also included in this industry.

Establishments primarily engaged in manufacturing sodium and potassium bichromate are classified in Industry 2819, Industrial Inorganic Chemicals, N.E.C.; tannic acid and synthetic organic tanning materials in Industry 2829, Industrial Organic Chemicals, N.E.C.; leather dressings and finishes for fabricated leather in Industry 2842, Cleaning and Polishing Products; natural tanning extracts and materials in Industry 2865, Natural Tanning and Dyeing Materials; and sizes and specialty textile chemicals in Industry 2899, Chemical Products, N.E.C. For a detailed list of primary products of Industry 2843, refer to Table 6A, product codes 2843011 to 2843071.

Assistants are substances not present in the finished product which increase the speed or completeness of tanning or dyeing reactions without taking part in the reaction itself. Examples for textiles are detergents, bleaches, boil-off soaps, and wetting agents; and for leather, sulfide cellulose extracts, formaldehyde, and sodium phosphates. Whenever respondents specified in sufficient detail that the assistants were soaps or detergents, the data were excluded from this category and included among those for soaps and detergents, (products of Industry 2841 and 2842 respectively), even though it was recognized that these products were used not to clean but to provide emulsifying and penetrating properties in combination with chemicals and other oils. Similarly, among the "finishes" were such products as gum, dextrin and other sizes, and specialty textile chemicals which, when specified in sufficient detail, were also excluded from the primary production of this industry and included among the respective commodities for Industry 2899, Chemical Products, N.E.C.

The value of Industry 2843 in 1954 totaled \$63 million. This included shipments of primary products (sulfonated oils and assistants) valued at \$47 million; shipments of secondary products valued at \$16 million; and a negligible amount for miscellaneous receipts.

Industry 2843 shipments of sulfonated oils and assistants, (primary products) in 1954 represented 74 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 77 percent. Secondary

products shipped by this industry in 1954 consisted mainly of sizes and other chemical specialties, \$1 million; alkaline and synthetic organic detergents and soap, \$2 million; and organic chemicals, \$1 million.

Industry 2843, shipments of sulfonated oil and assistants, in 1954 represented 78 percent of these products valued at \$60

million shipped by all industries. This coverage ratio in 1947 was 76 percent. Other industries shipping sulfonated oils, assistants, and finishes in 1954 consisted mainly of Industry 2822, Intermediates and Organic Colors, \$2 million; and Industry 2829, Organic Chemicals, N.E.C., \$2 million.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments classified in other industries.

## MANUFACTURES--INDUSTRY STATISTICS

Table 1.—GENERAL STATISTICS FOR THE UNITED STATES: 1954 AND EARLIER YEARS

(For explanation of column captions see Introduction)

Industry and census year	Establishments, number	All employees		Production workers		Value added by manufacture <sup>2</sup>	Cost of materials, etc.	Value of shipments <sup>3</sup>
		Number <sup>1</sup>	Payroll (\$1,000)	Number <sup>1</sup>	Wages (\$1,000)			
Soap and glycerin (S.I.C. 2841):

NA Not available.

<sup>1</sup>For the period 1949-1954, figures are based on employment for the payroll periods ended nearest the 15th of March, May, August and November. For 1947, they represent the average of 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the all employees figure represents the sum of the annual average number of production workers and number of nonproduction workers reported for one payroll period (usually in October).

<sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. See Introduction, "Value added by Manufacture." For the "Soap and glycerin" and "Cleaning and polishing products" industries, 1947 value added by manufacture does not equal the published value of shipments less cost of materials, etc. because an estimated value of production was used in the calculation in place of value of shipments. Since the 1949-1952 estimates were derived from 1947 base totals, the same inequality may exist for these years.

<sup>3</sup>For 1929 and 1947-1954, value of shipments; for all other years, value of production. See Introduction, "Value of Shipments."

<sup>4</sup>In this industry, which contains a large number of very small establishments, there is a possibility that some of these small establishments have been misclassified as to industry. This would not effect the statistics other than the number of establishments.

<sup>5</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. Estimates with a standard error in excess of 15 percent generally have been omitted from this table.

<sup>6</sup>In 1899, "Soap and glycerin" was combined with "Candles" in a single industry. Separate figures are, therefore, not available.

<sup>7</sup>Figures for 1899-1937 comparable with those for 1939-1954 were obtained by combining the data for "Cleaning and polishing products" and the discontinued classification "Blackening, staining, and dressings."

<sup>8</sup>Sulfonated oils and assistants" was classified prior to 1947 in the discontinued industry, "Tanning materials, natural dyestuffs, mordants, assistants, and sizes." The dyestuffs 1939 figures were obtained by retabulation of the 1939 returns for the latter industry. No comparable data are available for earlier years.

## SOAP, GLYCERIN; CLEANING, POLISHING, AND RELATED PRODUCTS

South and West.....	19	6	521	2,382	345	626	967	7,243	8,411	15,655	212	98	(D)
North Carolina.....	8	3	157	696	108	186	264	1,935	2,246	4,181	44		

Note: Detailed figures may not add to the totals because of independent rounding.

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing States are not shown separately in the table (see INTRODUCTION "Confidentiality of Data for Individual Companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1954:

S.I.C. 2841, Soap and Glycerin: New England—New Hampshire, 1 (1-19); Rhode Island, 1 (20-99); Connecticut, 2 (100-249); Middle Atlantic—New York, 31 (1,423); Pennsylvania, 28 (500-999); West North Central—Minnesota, 8 (20-99); Nebraska, 1 (20-99); South—South Carolina, 1 (1-19); Florida, 1 (1-19); Tennessee, 5 (20-99); Alabama, 1 (1-19); Oklahoma, 1 (1-19); Texas, 14 (500-999); West—Colorado, 2 (1-19); Washington, 3 (20-99); Oregon, 3 (20-99).

S.I.C. 2842, Cleaning and Polishing Preparations: New England—Maine, 1 (1-19); Vermont, 1 (20-99); Rhode Island, 10 (100-249); Connecticut, 23 (250-499); East North Central—Ohio, 78 (1,000-2,499); Wisconsin, 30 (1,000-2,499); West North Central—South Dakota, 1 (1-19); Nebraska, 5 (20-99); South and West—Delaware, 2 (1-19); District of Columbia, 1 (1-19); West Virginia, 3 (1-19); South Carolina, 5 (20-99); Georgia, 15 (100-249); Florida, 18 (100-249); Kentucky, 2 (1-19); Arkansas, 2 (1-19); Oklahoma, 3 (1-19); Texas, 36 (250-499); Idaho, 2 (1-19); Colorado, 9 (100-249); Arizona, 4 (1-19); Washington, 10 (20-99); Oregon, 9 (20-99); California, 133 (1,000-2,499).

S.I.C. 2843, Sulfonated Oils and Assistants: Middle Atlantic—New York, 11 (100-249); Pennsylvania, 19 (250-499); East North Central—Ohio, 1 (1-19); Michigan, 1 (1-19); Wisconsin, 2 (20-99); South and West—South Carolina, 6 (20-99); Georgia, 2 (100-249); Tennessee, 2 (100-249); California, 1 (1-19).

2843	Sulfonated oils and assistants.....1954.. 1947..	62,977 52,075	46,580 39,969	16,368 12,103	29 3	74 77	59,516 52,279	46,580 39,969	12,936 12,310	78 76

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.)

<sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry.

<sup>3</sup>This total includes \$480,841 thousand for soap and glycerin (product classes 28411 through 28414) and \$596,919 thousand for synthetic detergents (product classes 28421 and 28422). (See text.) These detergents have been included in the calculation of the coverage ratio; if they are excluded from the calculation the ratio becomes 82 percent.

**SOAP, GLYCERIN; CLEANING, POLISHING, AND RELATED PRODUCTS**

28D-9

**Table 5B.--INDUSTRY-PRODUCT ANALYSIS--SHIPMENTS BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954**

(In thousands of dollars. Each column shows for the industry listed in the column heading, the value of shipments divided between soap, glycerin, cleaning, polishing, and related preparations, other products, and miscellaneous receipts. Each figure represents the amount of the product class shown at the left shipped by the industry listed at the top of the column. The first four digits of the product class codes at the left represent the codes of the industries to which they are primary. (However, product classes 28421 and 28422 are primary both to Industry 2841 and Industry 2842.) All other products in a column represent products secondary to the specified industry)

Prod. class code	Class of products and miscellaneous receipts	Soap and glycerin (S.I.C. 2841)	Cleaning and polishing products (S.I.C. 2842)	Sulfonated oils and assistants (S.I.C. 2843)	Toilet preparations (S.I.C. 2893)	Chemical products, n.e.c. (S.I.C. 2899)	Other industries	All industries

xxx Not applicable.

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>As shown in Table 5A, the primary product total for Industry 2841 is \$801,752 thousand, or the sum of product classes 28411 through 28422; for Industry 2842, the total is \$447,086 thousand, or the sum of product classes 28420 through 28425; for Industry 2843, the total is \$46,580, or the value for product class 28430.

<sup>2</sup>Of this figure, \$17,779,000 shipped by establishments classified in Industry 2829, Organic Chemicals, N.E.C., and \$12,092,000 by establishments classified in Industry 2911, Petroleum Refinery.

<sup>3</sup>Of this figure, \$1,201,000 shipped by establishments classified in Industry 2829, Organic Chemicals, N.E.C.

<sup>4</sup>Of this figure, \$1,896,000 shipped by establishments classified in Industry 2822, Intermediates and Organic Colors, and \$2,031,000 by establishments classified in Industry 2829, Organic Chemicals, N.E.C.

<sup>5</sup>Included in other secondary products to avoid disclosure of figures for individual companies.

## MANUFACTURES—INDUSTRY STATISTICS

Table 6A.—QUANTITY AND VALUE OF PRODUCTS SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, FOR THE UNITED STATES: 1954 AND 1947

Product code	Product	Unit of quantity	1954		1947			
			Production for all purposes (quantity) <sup>1</sup>	Total shipments including interplant transfers		Production for all purposes (quantity)	Total shipments including interplant transfers	
				Quantity	Value		Quantity	Value
					(\$1,000)			(\$1,000)

NA Not available.

<sup>1</sup>Packaged soaps and detergents are limited to products packed in individual containers of less than 25 pounds; and for liquids, when in individual containers of less than 1 gallon.<sup>2</sup>Bars weighing less than 2 pounds.<sup>3</sup>Includes 5,630 thousand pounds of medical and medicated soap, valued at \$3,144 thousand reported and published separately in 1947.<sup>4</sup>Containing more than 25 percent anhydrous soap.<sup>5</sup>Containing 25 percent or less anhydrous soap.<sup>6</sup>Code 2841198 combined with code 2841298, "Other soaps," bulk.<sup>7</sup>Codes 2841100, 2841200, and 2841300 combined with code 2841000, "Soap products, not specified by kind."<sup>8</sup>Bulk soaps and detergents are limited to products packed in individual containers of 25 or more pounds; and for liquids, when in individual containers of 1 gallon or more.<sup>9</sup>Code 2841298 excludes \$1,505 thousand reclassified as shaving creams, tube and jar, included in code 2841331.<sup>10</sup>Codes 2842119, 2842133, and 2842137 combined with code 2842113, "Synthetic organic detergents, bars."<sup>11</sup>Containing 10 percent or more synthetic organic surface active agents.<sup>12</sup>Containing less than 10 percent synthetic organic surface active agents.<sup>13</sup>Codes 2842133-2842137 combined with codes 2842233-2842237.<sup>14</sup>Codes 2842100, 2842200, 2842300, 2842400, and 2842500 combined with code 2842000, "Cleaning and polishing preparations, not specified by kind."<sup>15</sup>Code 2842219 combined with code 2842237, "Paste and jelly synthetic organic detergents in combination with soap."<sup>16</sup>1947 quantity published in pounds converted to gallons on the basis of 8 pound equivalent to 1 gallon.<sup>17</sup>Code 2842351 not reported separately in 1947 but included with code 2842365, "Liquid brush cleaners."<sup>18</sup>Code 2842355 not reported separately in 1947 but included with code 2842361, "Powder brush cleaners."<sup>19</sup>Code 2842451 combined with code 2842498, "Other polishing preparations and related products, n.e.c."<sup>20</sup>Includes figures for egg yolk, wetting agents, waterproofing emulsions, mordants other than tannic acid and an undetermined quantity of sizes, soaps, and synthetic detergents.<sup>21</sup>Shaving preparations containing no soap (brushless) are classified as primary to Industry 2893, Toilet Preparations. The 1954 shipments for these preparations in tubes amounted to \$6,783 thousand and in jars \$1,466 thousand. The comparable 1947 figures are \$7,048 thousand and \$2,924 thousand thousand, respectively.

## SOAP, GLYCERIN; CLEANING, POLISHING, AND RELATED PRODUCTS

28D-13

Table 6B.—VALUE OF PRODUCT CLASSES SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, BY DIVISIONS AND STATES FOR 1954, AND UNITED STATES TOTALS FOR EARLIER YEARS

(In thousands of dollars. Statistics are shown for selected product classes which are economically significant and production of which is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (Table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are listed only if the value of shipments is more than \$1 million and the figure does not disclose individual company information. Additional States which had shipments of more than \$1 million of the individual product classes are listed in footnote 1)

Table 8.—GENERAL STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY SPECIALIZATION AND PRIMARY PRODUCT CLASS SPECIALIZATION, FOR THE UNITED STATES: 1954

(This table presents selected statistics for establishments classified according to their degree of specialization in products primary to the industry. The establishments are classified in two ways: (1) by industry specialization—the degree of specialization in all primary products of the industry; and (2) by product-class specialization—the degree of specialization in the largest product class of the establishment. The degree of "industry specialization" for an establishment represents the ratio of its primary product shipments to its total product shipments, primary and secondary. The degree of "product-class specialization" for an establishment represents the ratio of its largest product class shipments to its total product shipments, primary and secondary. Data are not shown for some industries, product classes, and specialization ranges for a variety of reasons, consequently, detailed figures frequently do not add to the totals. See Introduction for detailed explanation.)

Ind. or product class No.	Industry or product class by percent of specialization	Estab- lish- ments, number	All employees		Production workers			Value added by manufacture (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments (\$1,000)

## MANUFACTURES—INDUSTRY STATISTICS

TABLE 8.—GENERAL STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY SPECIALIZATION AND PRIMARY PRODUCT CLASS SPECIALIZATION, FOR THE UNITED STATES: 1954—Continued

Ind. or product class No.	Industry or product class by percent of specialization	Establishments, number	All employees		Production workers			Value added by manufacture (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments (\$1,000)
			Number	Payroll (\$1,000)	Number	Man-hours (1,000)	Wages (\$1,000)			
2843	SULFONATED OILS AND ASSISTANTS (entire industry).....	103	2,355	13,044	1,352	2,507	4,729	28,322	34,655	62,977
	Establishments with:									
	90% or more specialization.....	64	924	5,362	510	931	1,747	11,251	13,654	24,905
	75-89% specialization.....	15	445	2,747	246	367	774	4,321	4,337	8,658
	50-74% specialization.....	16	417	1,835	265	546	893	5,598	7,856	13,455
	All other <sup>1</sup> .....	8	568	3,099	329	662	1,314	7,151	8,807	15,959

<sup>1</sup>This class includes data for establishments with less than 50 percent specialization in the primary products of the industry and establishments engaged exclusively in contract work defined in the industry. Miscellaneous small statistical adjustments are also included.

<sup>2</sup>By plants with soap kettles.

<sup>3</sup>By plants which have no soap kettles.

# Paints, Varnishes, Pigments, and Allied Products

This report shows 1954 Census of Manufactures statistics for establishments classified in each of the following industries:

Code	Title
2851--	Paints and Varnishes
2852--	Inorganic Color Pigments
2853--	Whiting and Fillers

This group includes establishments primarily engaged in the manufacturing of paints, enamels, varnishes, lacquers, dopes, inorganic color pigments, whiting, putties, caulking compounds, and allied paint products. Establishments primarily engaged in manufacturing organic color pigments are classified in Industry 2822, Intermediates and Organic Colors; bone black, carbon black, and lamp black in Industry 2895, Carbon Black; artists' oil and water colors in Industry 3954, Artists' Materials; synthetic resin used for protective coatings in Industry 2823, Plastics Materials; printing inks in Industry 2891, Printing Ink; turpentine in Industry Group 286, Gum and Wood Chemicals; and bituminous roof coatings in Industry 2952, Roofing Felts and Coatings.

2851--Paints and Varnishes (Full Standard Industrial Classification Title: Paints, Varnishes, Lacquers, Japans, and Enamels)

This industry comprises establishment primarily engaged in manufacturing paints (in paste form or mixed ready to use), varnishes, lacquers, japans, enamels, and shellac. Important products of this industry include water paints and calcimines (dry and paste); paints in paste form (white or red lead in oil, zinc oxide in oil, colors in oil or japan); ready-mixed and semi-paste paints (paints in oil, under-coatings and primers, wall paints, stains, and bituminous paints); varnishes and varnish stains; clear and pigmented lacquers; enamels; japans, shellac and dopes.

For a detailed list of primary products of Industry 2851, refer to Table 6A, product codes 2851111 to 2851298.

The value of shipments of Industry 2851, Paints and Varnishes, in 1954 totaled \$1,494 million. This included shipments of primary products (paints, varnishes, lacquers and enamels) valued at \$1,410 million, shipments of secondary products valued at \$80 million, and miscellaneous receipts (mainly contract and commission work on material owned by others) of \$4 million.

Receipts for merchandising (products bought and resold without further manufacture or processing) valued at \$85 million are excluded from the \$1,494 million value of shipments of Industry 2851. Data relating to these merchandising receipts are also excluded from the cost of materials and value added, but these activities are reflected in other detailed industry statistics, mainly employment and inventory.

Industry 2851 shipments of paints and varnishes in 1954 represented 95 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 94 percent. Secondary products shipped by Industry 2851 in 1954 consisted mainly of plastics materials, \$12 million; inorganic color pigments, \$9 million; whiting and fillers, \$15 million; chemical specialties, (such as stamp-pad inks and writing inks) \$8 million; gypsum products, \$5 million; glues and adhesives, \$5 million; printing ink, \$3 million; and bituminous roof coatings), \$3 million.

Shipments of paints and varnishes by plants classified in Industry 2851 in 1954 represented 97 percent of the paints and varnishes, valued at \$1,458 million, shipped by all industries. This coverage ratio in 1947 was 96 percent. Other plants shipping paints and varnishes in 1954 were classified mainly in Industry 2852, Inorganic Color Pigments, \$2 million; Industry 2822, Intermediates and Organic Colors, \$6 million; Industry 2891, Printing Ink, \$10 million.

The comparability of the 1954 product data with those for earlier years has been affected by the numerous revisions and rearrangements of products in the 1954 Census classifications. To overcome some of the limitations resulting from the introduction of the new classification, the 1954 and 1947 products have been regrouped, and data for the two years are also shown in Table 6A, Quantity and Value. While these regroupings provide comparable 1954 and 1947 statistics for many kinds of paints, varnishes and lacquers, the rearranged data for some products may not provide identical comparisons. For example, the figures for industrial maintenance coatings (product codes 2851211 and 2851213) are not listed under "Ready Mixed Paints" but under "Other Paints" because it is believed that these products were reported in this basket classification in 1947. Product-class data for earlier years are not shown in Table 6B, since the products could not be regrouped to achieve comparability at the product-class level.

The 1954 classifications established two product groups--trade products and industrial products. Trade products are "stock-type" commodities normally distributed through wholesale and retail channels. Industrial products are commodities made by special formulae to meet the specific conditions of application and use of certain manufactured articles, and are usually sold directly to the manufacturer for use in the general manufacturing process.

The terms "trade products" and "industrial products," used in this report refer to specific products, and monthly data for which are published, should be clearly distinguished from the terms "trade sales" and "industrial sales" in the Facts for Industry Series M19J, Paint, Varnish, and Lacquers. In the monthly series, the data refer to types of sales based on class of customer. For example, automotive finishes (industrial products) may be reported in the Facts for Industry survey both as industrial sales, when sold to the automobile manufacturer, and as trade sales, when sold for use in automobile paint shops. In the Census of Manufactures report, however, all shipments of automotive finishes are classified as industrial products.

The data reported on the 1954 Census of Manufactures reports are reconciled (see table below) with those appearing in the monthly Facts for Industry Series M19J by utilizing the data shown in Table 9, Distribution of Paint, Varnish, and Lacquers, by Product Class and Class of Customer. The 1954 figure for industrial products of \$703,789,000 appearing in Table 9 was adjusted downward to \$635,765,000 by deducting the totals shown for bleached shellac (code 2851267) and for other industrial product finishes (code 2851298) appear in Table 6A because these items are not covered in the Facts for Industry Survey M19J. By the application of the ratios obtained from Table 9, totals for industrial and trade sales were derived. The adjusted 1954 Census of Manufactures totals closely approximate those for trade sales and industrial sales shown in the Facts for Industry Series M19J and the differences are less than the standard errors applicable to the estimated totals published in the Facts for Industry Series M19J.

The various operations needed to manufacture paint are wholly mechanical (i.e., requiring physical not chemical change) although chemical processes are involved in the manufacture of the paint constituents, including the film-forming materials. On the other hand, lacquer formulation is very complex. While some of the larger plants manufacture some of the constituent raw materials including the synthetic resins and pigments, most of the plants are purchasers and are primarily engaged in the mixing operation. In addition, many plants may operate a "prescription-type" business, and so the industry is characterized by a relatively large number of small establishments. For example, of the 1469 establishments classified in this industry in 1954, 62 percent employed fewer than 20 employees and accounted for only 11 percent of the total employed. Many paint companies also operate their own retail outlets at locations different from the manufacturing plant. As indicated in

## MANUFACTURES—INDUSTRY STATISTICS

## TRADE AND INDUSTRIAL SALES

(In thousands of dollars)

Class of customer	Sales total	Industrial products		Trade products		Industrial sales, total	Trade sales, total
		Industrial sales (computed)	Trade sales (computed)	Industrial sales (computed)	Trade sales (computed)

Shipments to buyers for foreign countries.....	21,078	6,358	...	...	14,720	6,358	14,720

<sup>1</sup>The standard errors indicate the differences that can be expected between the estimates and comparable complete canvass totals, because of sampling fluctuations.

Table 9, shipments through such channels accounted for approximately 23 percent of the total shipments for trade products.

Data showing the consumption of specified inorganic pigments appear in the *Minerals Year Book*, a publication of the U. S. Department of the Interior. Statistics for toners and lakes are available from the United States Tariff Commission's annual report, *Synthetic Organic Chemicals*. Quantities of specified oils consumed in paints and varnishes are compiled monthly by the Census Bureau and are published in the *Facts for Industry Series M17-2, Fats and Oils, Consumption by Uses*. Figures showing the quantities of specially denatured ethyl alcohol used as a solvent in lacquers, varnishes, and enamels are available from the United States Internal Revenue Service.

#### 2852--Inorganic Color Pigments

This industry comprises establishments primarily engaged in manufacturing dry colors and inorganic color pigments. Important products of this industry include black pigments such as black iron oxide, white pigments such as white lead and blanc fixe, and titanium pigments; color pigments, such as ultramarine and vermilion; and chrome, iron, and other dry colors. For a detailed list of primary products of Industry 2852, refer to Table 6A, product codes 2852111 to 2852398.

The value of shipments of Industry 2852, Inorganic Color Pigments, in 1954 totaled over \$371 million. This included shipments of primary products (inorganic color pigments) valued at \$325 million, shipments of secondary products valued at \$45 million, and miscellaneous receipts of \$2 million.

Industry 2852 shipments of inorganic color pigments in 1954 represented 88 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was also 88 percent. Secondary products shipped by Industry 2852 in 1954 consisted mainly of sulfuric acid and other inorganic chemicals, \$24 million; synthetic organic pigments, lakes and toners, \$6 million; and chemical specialties, \$3 million.

Shipments of inorganic color pigments by plants classified in Industry 2852 in 1954 represented 88 percent of the inorganic color pigments, valued at \$370 million, shipped by all industries. This coverage ratio in 1947 was 84 percent. Other plants shipping inorganic color pigments in 1954 were classified mainly in Industry 2822, Intermediates and organic colors, \$16 million, and Industry 2851, Paints and Varnishes, \$9 million. Excluded from the \$370 million value of shipments of

color pigments is the production by paint manufacturers which is consumed in paints produced at the same location. No separate data are shown in the census for this captive production.

The raw material and labor requirements of manufacturers producing white opaque and extender pigments differ from those of manufacturers producing chrome colors or other inorganic color pigments, and establishment statistics for these separate groupings are shown in Table 8A. Included in the latter group are plants whose principal activity in "blending," and which purchase either toners or inorganic pigments from other manufacturers classified in Industry 2852. The products of such establishments are included in product code 2852398.

Data on the principal raw materials consumed by pigment manufacturers were not compiled in the 1954 Census of Manufacturers. Such information is compiled by the United States Department of the Interior, Bureau of Mines, and published in its annual publication, *Minerals Year Book*.

The shipments data shown in this Census report for certain pigments differ from the figures shown in the *Minerals Year Book* partly because of coverage differences. (See Introduction for establishments covered by the Census of Manufacturers.) In addition, reports to the Census Bureau reflect the value of the product as shipped from each producing plant whether as a pigment or as a finished product such as paint or storage batteries. On the other hand, lead and zinc "pigments consumed by producing companies to make other products . . . are considered as shipments" of pigments by the Bureau of Mines. The Bureau of Mines also eliminates the quantities of pigments sold or transferred for processing into other pigments for which it publishes data. These quantities and values are not eliminated by the Census Bureau and this duplication accounts for the difference in lead and zinc oxide data as reported by the two agencies. Other minor reporting differences exist; for example, the Bureau of Mines value figures are exclusive of container costs, whereas the Census Bureau figures include these costs. The distribution by end products for specified pigments is also shown in the *Minerals Year Book*.

2853--Whiting and Fillers (Full Standard Industrial Classification Title: Whiting, Putty Wood Fillers, and Allied Paint Products)

This industry comprises establishments primarily engaged in manufacturing whiting from limestone or chalk; whiting ground in oil (putty); and wood fillers and allied paint products such as caulking and glazing compounds. Establishments pri-

marily engaged in manufacturing products like spackle and similar plasters are classified in Industry 3272, Gypsum Products. For a detailed list of primary products of Industry 2853, refer to Table 6A, product codes 2853011 to 2853098.

The value of shipments of Industry 2853, Whiting and Fillers, in 1954 totaled \$24 million. This included shipments of primary products (whiting and fillers) valued at \$21 million, shipments of secondary products valued at \$3 million, and a negligible amount for miscellaneous receipts.

Industry 2853 shipments of whiting and fillers in 1954 represented 89 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 81 percent.

Shipments of whiting and fillers by plants classified in Industry 2853 in 1954 represented 47 percent of the whiting and fillers, valued at \$45 million, shipped by all industries. This coverage ratio in 1947 was 53 percent. Other plants shipping whiting and fillers in 1954 were classified mainly in Industry 2851, Paints and Varnishes, \$15 million. In addition, an undetermined amount of whiting and other grades of chalk was produced by establishments classified in Mineral Industries.

Although "paint driers" are considered as primary to Industry 2853, many establishments reported this product as miscellaneous synthetic (acyclic) chemicals. Detailed product information for paint driers is compiled and published by the United States Tariff Commission in its annual publication, Synthetic Organic Chemicals.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments classified in other industries.

## MANUFACTURES—INDUSTRY STATISTICS

\* Revised

NA Not available.

<sup>1</sup>For the period 1949-1954, figures are based on employment for the payroll periods ended nearest the 15th of March, May, August and November. For 1947, they represent the average of 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the figure for all employees represents the sum of the annual average number of production workers and the number of nonproduction workers reported for one payroll period (usually in October).

<sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. See Introduction, "Value Added by Manufacture."

<sup>3</sup>For 1929 and 1947-1954, value of shipments; for all other years, value of production. See Introduction, "Value of Shipments."

<sup>4</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. Estimates with a standard error in excess of 15 percent generally have been omitted from this table.

<sup>5</sup>The figures for 1939 are not directly comparable with those for earlier years. Value added by manufacture for 1939 on a basis comparable with earlier years was \$189.4 million for "Paints and varnishes" and \$40.5 million for "Inorganic color pigments." The 1935 and 1937 figures for these industries include data for establishments primarily engaged in manufacture of whittings and fillers. (See footnote 7 below).

<sup>6</sup>Prior to 1935, "Paints and varnishes" and "Inorganic color pigments" constituted a single classification. The separate figures shown for these industries have been combined with those for "Whiting and fillers" in order that statistics can be shown for the entire period 1899-1947 (The reason for the inclusion of "Whiting and fillers" in this combination is explained in footnote 7 below).

<sup>7</sup>Prior to 1947, "Whiting and fillers" was not classified as a separate industry but was included in "Paints and varnishes" and "Inorganic color pigments." The 1939 figures were obtained from a retabulation of the returns for these industries. For earlier years, similar retabulations were not made, and data on whiting and fillers are included in the figures for "Paints and varnishes" and "Inorganic color pigments."

## PAINTS, VARNISHES, PIGMENTS, AND ALLIED PRODUCTS

Notes: Detailed figures may not add to the totals because of independent rounding.

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup> General statistics for some producing States are not shown separately in the table (see Introduction "Confidentiality of Data for Individual Companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1947:

S.I.C. 2851, Paints and Varnishes: New England—Maine, 1 (1-19); New Hampshire, 2 (1-19); Vermont, 2 (1-19); Massachusetts, 62 (1716); Rhode Island, 9 (250-499); East North Central—Ohio, 111 (5,000-9,999); Indiana, 30 (1,000-2,499); West North Central—Minnesota, 19 (500-999); Iowa, 9 (500-999); North Dakota, 1 (1-19); Nebraska, 4 (20-99); Kansas, 5 (100-249); South Atlantic—Maryland, 26 (500-999); District of Columbia, 2 (20-99); West Virginia, 4 (20-99); North Carolina, 19 (250-499); South Carolina, 3 (20-99); Georgia, 22 (500-999); East South Central—Kentucky, 21 (100-249); Tennessee, 11 (250-499); Alabama, 7 (100-249); West South Central—Arkansas, 1 (1-19); Louisiana, 16 (250-499); Oklahoma, 7 (100-249); West—Idaho, 1 (1-19); Colorado, 9 (250-499); New Mexico, 1 (1-19); Utah, 2 (20-99); Washington, 11 (100-249).

S.I.C. 2852, Inorganic Color Pigments: New England—Maine, 1 (1-19); Vermont, 1 (20-99); Massachusetts, 3 (1-19); Rhode Island, 1 (1-19); East North Central—Ohio, 8 (500-999); Indiana, 1 (20-99); Wisconsin, 2 (1-19); West North Central—Missouri, 4 (100-249); Kansas, 2 (250-499); South—Delaware, 1 (500-999); Maryland, 3 (500-999); Virginia, 5 (250-499); West Virginia, 1 (20-99); Georgia, 1 (1-19); Florida, 1 (1-19); Kentucky, 1 (100-249); Alabama, 1 (1-19); Texas, 1 (1-19); West—Montana, 1 (20-99); California, 13 (100-249).

S.I.C. 2853, Whiting and Fillers: East North Central—Ohio, 8 (100-249); Wisconsin, 2 (1-19); West North Central—Minnesota, 2 (1-19); Iowa, 2 (1-19); Missouri, 7 (20-99); South—Virginia, 1 (1-19); North Carolina, 1 (1-19); Georgia, 1 (1-19); Florida, 2 (1-19); Tennessee, 2 (100-249); Louisiana, 3 (20-99); Texas, 4 (20-99); West—Colorado, 1 (1-19); Washington, 1 (1-19); California, 13 (100-249).

## MANUFACTURES--INDUSTRY STATISTICS

Electric motors driven by purchased energy.....do...	318	136	69	5	3
Electric motors driven by energy generated at the establishment.....do...	5	65	65	...	...

Note: Detailed figures may not add to the totals because of independent rounding. NA Not available. xxx Not applicable. <sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.) Columns containing totals for establishments having 90% or more primary product specialization are shown only for those industries having a primary product specialization of less than 90%. <sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry. <sup>3</sup>Less than \$500 thousand. <sup>4</sup>Less than 500 hp.

Table 4.—SELECTED STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY EMPLOYMENT SIZE, FOR THE UNITED STATES: 1954

(Value figures in thousands of dollars. For explanation of line captions see Introduction. Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted and the combined figure is underlined and shown in the size-class to the left)

	1947..	18,791	15,279	3,500	12	81	29,007	15,279	13,728	53

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.)

<sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry.

## MANUFACTURES—INDUSTRY STATISTICS

Table 5B.—INDUSTRY-PRODUCT ANALYSIS—SHIPMENTS BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954

(In thousands of dollars. Each column shows for the industry listed in the column heading, the value of shipments divided between paint and allied products, other products, and miscellaneous receipts. Each figure represents the amount of the product class shown at the left shipped by the industry listed at the top of the column. The first four digits of the product class codes at the left represent the codes of the industries to which they are primary. All other product classes in a column represent products secondary to the specified industry)

Pr d. class code	Class of products and miscellaneous receipts	Paints and varnishes (S.I.C. 2851)	Inorganic color pigments (S.I.C. 2852)	Whiting and fillers (S.I.C. 2853)	Inter- mediates and organic colors (S.I.C. 2822)	Other industries	All industries

xxx Not applicable.

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>Includes \$9,990 thousand shipped by establishments classified in Industry 2891, Printing Ink.

<sup>2</sup>Included in "Other Secondary Products" to avoid disclosure of figures for individual companies.

<sup>3</sup>Of this figure 64 percent consists of the following product classes: 28235, Synthetic resins, except protective coatings, 28254, Other synthetic organic chemicals, and 34111, Metal cans.

## PAINTS, VARNISHES, PIGMENTS, AND ALLIED PRODUCTS

28E-9

Table 6A.—QUANTITY AND VALUE OF PRODUCTS SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, FOR THE UNITED STATES: 1954 AND 1947

Product code	Product	1954		
		Production for all purposes	Total shipments including interplant transfers	
			Quantity	Value
		(1,000 gallons)	(1,000 gallons)	(\$1,000)
2851---	Paints and varnishes, total.....	<sup>2</sup> 632,460	<sup>2</sup> 608,251	1,458,297
28511	Trade sales products (including general maintenance) <sup>3</sup> .....	281,011	275,890	735,990
	Exterior use:			
	Oil and alkyd vehicle paints in paste and semipaste form:			
2851111	White lead in oil <sup>4</sup> .....	1,675	1,299	3,046
2851113	Red lead in oil.....	232	233	953
2851115	Other colors in oil and in japan.....	925	913	4,926
2851117	Other paste and semipaste paints.....	1,530	1,488	5,399
	Oil paints, enamels, and varnishes in ready-mixed form:			
2851121	Oil and alkyd vehicle house paints.....	45,726	45,339	152,406
2851123	Enamels (including trim and trellis, porch, and deck).....	13,890	13,613	49,060

2853098	Other allied paint products.....	.....	xxx	xxx	6,207	xxx	xxx	762
2853000	Whiting and fillers, not specified by kind.....	.....	xxx	xxx	1,740	xxx	xxx	286

xxx Not applicable.

D Withheld to avoid disclosing figures for individual establishments.

NA Not available.

<sup>1</sup>In many instances, the 1954 product data may not be compared directly with the 1947 product statistics because of numerous revisions and rearrangements of products incorporated into the 1954 product classifications. Comparability by product groupings is shown below.

<sup>2</sup>Include estimates for product codes 2851000, 2851100, 2851200, and 2851298 and exclude figures for bleached shellac.

<sup>3</sup>The comparability of the shipment figures with those reported on the monthly survey M19J, "Paint, Varnish, and Lacquer," will be explained in the final publication. Quantity data include estimates, (see footnote 2 above).

<sup>4</sup>Quantities converted from pounds to gallons on the basis of 100 pounds per 8-1/2 gallons.

<sup>5</sup>Quantities converted from pounds to gallons on basis of 5 pounds per gallon.

<sup>6</sup>Quantities converted from pounds to gallons on basis of 4 pounds per gallon.

<sup>7</sup>Quantities converted from pounds to gallons on basis of 10 pounds per gallon.

<sup>8</sup>Estimated on basis of average for trade sale products.

<sup>9</sup>The products included are specially formulated coatings for special conditions either in the interior or exterior of industrial plants requiring protection against extreme temperatures, fungi, chemical fumes, etc.

<sup>10</sup>Includes values for formulated paint vehicles, resins, and other special solutions, automotive undercoatings, pigment dispersions, plastisols, and other semimanufactured paint products. Quantities partially estimated on basis of average reported for this product line.

<sup>11</sup>Estimated on basis of average for industrial product finishes.

<sup>12</sup>Estimated on basis of average for trade sales products and industrial product finishes.

<sup>13</sup>An unspecified amount of semipaste paints included in totals for product code 2851153, Interior Ready Mixed Paints.

<sup>14</sup>An unspecified amount of bituminous paint included in totals for product code 2851213, Industrial Maintenance Coatings, Exterior.

<sup>15</sup>Includes \$24,647,000 and \$966,000 for "Paints, Varnishes, Lacquers, Japans, and Enamels, Not Specified by Kind," \$35,297,000 for "Other Primary Products," and \$2,615,000 for "Other Paints, N.E.C."

<sup>16</sup>See Industry 2822, "Intermediates and Organic Colors," for information on lakes and toners.

<sup>17</sup>Codes 2852141 and 2852151 have been combined with code 2852198.

<sup>18</sup>Code 2852251 has been combined with code 2852298.

<sup>19</sup>Code 2852251 has been combined with code 2852398.

<sup>20</sup>Code 2852311 has been combined with code 2852319.

<sup>21</sup>Code 2852313 has been combined with code 2852319.

<sup>22</sup>Code 2852351 has been combined with code 2852398.

## MANUFACTURES—INDUSTRY STATISTICS

Table 6B.—VALUE OF PRODUCT CLASSES SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, BY DIVISIONS AND STATES FOR 1954,  
AND UNITED STATES TOTALS FOR EARLIER YEARS

(In thousands of dollars. Statistics are shown for selected product classes which are economically significant and production of which is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (Table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are listed only if the value of shipments is more than \$1 million and the figure does not disclose individual company information. Additional States which had shipments of more than \$1 million of the individual product classes are listed in footnote 1)

<sup>1</sup>For the specified product classes, shipments of over \$1 million were reported for the States listed but the exact figures are withheld to avoid disclosure of individual company figures: 28511, Rhode Island, District of Columbia, Alabama, and Utah; 28512, Kansas, West Virginia, and Mississippi.

<sup>2</sup>Comparable data for previous years unavailable, see text.

TABLE 7 NOT APPLICABLE TO THIS BULLETIN

Table 8.—GENERAL STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY SPECIALIZATION AND PRIMARY PRODUCT CLASS SPECIALIZATION, FOR THE UNITED STATES: 1954

(This table presents selected statistics for establishments classified according to their degree of specialization in products primary to the industry. The establishments are classified in two ways: (1) by industry specialization—the degree of specialization in all primary products of the industry; and (2) by product-class specialization—the degree of specialization in the largest product class of the establishment. The degree of "industry specialization" for an establishment represents the ratio of its primary product shipments to its total product shipments, primary and secondary. The degree of "product-class specialization" for an establishment represents the ratio of its largest product class shipments to its total product shipments, primary and secondary. Data are not shown for some industries, product classes, and specialization ranges for a variety of reasons, consequently, detailed figures frequently do not add to the totals. See Introduction for detailed explanation.)

Ind. or product class No.	Industry or product class by percent of specialization	Establishments, number	All employees		Production workers			Value added by manufacture	Cost of materials, etc.	Value of shipments
			Number	Payroll	Number	Man-hours	Wages			
2851	PAINTS AND VARNISHES (entire industry).....	1,469	56,580	263,887	33,865	67,660	127,640	642,656	851,816	1,494,399

## Gum and Wood Chemicals; Fertilizers

This report shows 1954 Census of Manufactures statistics for establishments classified in each of the following industries:

Code	Title
2861	Hardwood Distillation
2862	Softwood Distillation
2863	Gum Naval Stores
2865	Tanning and Dyeing Materials
2871	Fertilizers
2872	Fertilizers, Mixing Only

Excluded from the industries covered in this report are plants primarily engaged in producing basic organic or inorganic chemicals; those manufacturing primarily synthetic dyes and synthetic organic chemicals including tanning materials and urea are classified in Industry 2829, Organic Chemicals, Not Elsewhere Classified, and fertilizer materials such as ammonium nitrate and ammonium sulfate, in Industry 2819, Inorganic Chemicals, Not Elsewhere Classified. Plants primarily engaged in extracting and preparing potassium salts are classified in Mineral Industries.

### 2861—Hardwood Distillation

This industry comprises establishments primarily engaged in the destructive distillation of hardwood resulting in the production of charcoal and pyroligneous acid or raw liquor. Such establishments may be engaged in further distillation and washing processes resulting in the production of tars, oils, acids, and alcohols, such as hardwood pitch, wood creosote, natural acetic acid, wood oils, calcium acetate, ethyl acetate, methanol, and methyl acetone.

Establishments primarily engaged in manufacturing synthetic acetic acid and methanol are classified in Industry 2829, Organic Chemicals, N.E.C., and establishments primarily engaged in producing activated charcoal are classified in Industry 2819, Inorganic Chemicals, N.E.C. For a detailed list of primary products of Industry 2861, refer to table 6A, product codes 2861011 to 2861098.

The value of shipments of Industry 2861, Hardwood Distillation, in 1954 totaled \$16 million. This included shipments of primary products (hardwood distillation products) valued at about \$15 million, shipments of secondary products valued at \$1 million, and a negligible amount for miscellaneous receipts.

Industry 2861 shipments of hardwood distillation products in 1954 represented 75 percent of its total product shipments (primary and secondary). In 1947, this primary products specialization ratio was 94 percent. Secondary products shipped by Industry 2861 in 1954 consisting mainly of synthetic organic chemicals, totaled \$1 million.

Industry 2861 shipments of hardwood distillation products in 1954 represented 100 percent of these products valued at \$15 million shipped by all industries. In 1947, this "coverage ratio" was 96 percent.

While various recovery processes are used by the plants classified in the wood distillation industry, the resulting products (acetic acid, methanol and charcoal) are generally jointly produced. A few plants, however, reported the production only of charcoal by the older kiln or pit method in which no by-products are obtained. Methanol is generally refined in the same plants producing the crude products but a portion is sold for refining elsewhere or refined on a toll basis.

With the increased production synthetically of acetic acid and methanol, the wood distillers market has greatly decreased. In 1947 approximately 7 percent of acetic acid production was by wood distillation compared with 87 percent in 1927. The com-

parable 1954 percentage is 4. Data showing the consumption of hardwoods in distillation appear in Table 7, Materials Consumed by Kind.

Monthly production data for acetic acid and methanol, natural as well as synthetic, appear in Facts for Industry series 6-2, "Organic Chemicals," published by the U. S. Tariff Commission; statistics for annual sales of natural acetic acid and methanol appear in Facts for Industry series M19A, "Inorganic Chemicals and Gases," and for the sales of synthetic grades in the U. S. Tariff Commission publication, "Synthetic Organic Chemicals, Production and Sales." The totals appearing in this report differ slightly from those published in the above reports because of minor reporting differences.

### 2862—Softwood Distillation

This industry comprises establishments primarily engaged in softwood distillation, resulting in the production of wood naval stores either by the steam-and-solvent process or by the destructive distillation process. Important products of this industry include wood turpentine, wood rosin, pine oil, pitch, tar, tar oils, charcoal, and wood creosote. This industry also includes establishments primarily engaged in manufacturing charcoal from softwood and sawdust in charcoal kilns, and pits, which do not recover the distillation products.

Establishments primarily engaged in manufacturing turpentine and rosin by distillation of pine gum are classified in Industry 2863, Gum Naval Stores. Pulp mills producing sulfate wood naval stores (sulfate wood turpentine and tall oil) as byproducts of the production of pulp by the sulfate process are classified in Industry 2611, Pulp Mills. For a detailed list of the primary products of Industry 2862, refer to Table 6A, product codes 2862011 to 2862098.

The value of shipments of Industry 2862, Softwood Distillation, in 1954 totaled \$89 million. This included shipments of primary products (softwood distillation products) valued at over \$60 million, shipments of secondary products valued at over \$28 million, and a negligible amount for miscellaneous receipts.

Industry 2862 shipments of softwood distillation products in 1954 represented 68 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 83 percent. This decline in primary product specialization reflects the "upgrading," particularly of wood rosin, into products which are classified as primary to other industries. These consist mainly of chemical specialties, plastics and resin materials as well as organic agricultural chemicals included in the total of \$28 million for secondary products.

Industry 2862 shipments of softwood distillation products in 1954 represented 98 percent of these products valued at \$62 million shipped by all industries. This coverage ratio was 99 percent in 1947.

Establishments classified in Industry 2862 manufacture softwood distillation products either by the steam-and-solvent process or by the destructive distillation process. While each of these processes result in the production of coproducts, turpentine, wood rosin, pine oil, as well as charcoal, the data for charcoal shown in Table 6A include a small amount produced in kilns where the other distillation products are not recovered.

The Agricultural Marketing Service, United States Department of Agriculture, publishes monthly data showing the production and stocks of gum and wood turpentine and rosin and miscellaneous naval stores and semi-annual reports showing consumption by industries and stocks at industrial plants and distribution points. The totals appearing in this report differ

slightly from those published by that agency because of minor reporting differences.

#### 2863—Gum Naval Stores

This industry comprises establishments primarily engaged in manufacturing turpentine and rosin by the distillation of pine gum. Establishments primarily engaged in manufacturing turpentine and rosin by wood distillation are classified in Industry 2862, Softwood Distillation, and those engaged in the gathering of pine gum are classified in Forestry Industries. For a detailed list of primary products of Industry 2863, refer to Table 6A, product codes 2863011 to 2863098.

The value of shipments of Industry 2863, Gum Naval Stores, in 1954 totaled \$25 million. This included shipments of primary products (gum naval stores) valued at \$22 million, shipments of secondary products valued at \$3 million, and a negligible amount for miscellaneous receipts.

Industry 2863 shipments of gum naval stores (primary products) in 1954 represented 88 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 98 percent. Secondary products shipped by this industry in 1954 consisting mainly of chemical specialties, totaled \$3 million.

Industry 2863 shipments of gum naval stores in 1954 represented 95 percent of these products valued at \$23 million shipped by all industries. In 1947, this coverage ratio was 99 percent.

In the manufacture of gum naval stores, two types of stills are utilized, namely, a fire still or a steam still. The older type fire stills are smaller, less efficient and more primitive than steam stills which have practically replaced them. Only 5 of the 755 establishments engaged in the 1939 production of gum naval stores were steam stills and these accounted for approximately 15 percent of the total output. In 1947, of the 132 establishments primarily engaged in this operation 32 were steam stills accounting for 85 percent of the output. The 1947 statistics are limited to information collected only from steam stills; fire stills were not covered in the 1947 Census. By 1954 there were less than 10 fire stills operated in the United States and practically all of the U. S. production was accounted for by steam (central) stills.

#### 2865—Tanning and Dyeing Materials

This industry comprises establishments primarily engaged in manufacturing solid and liquid tanning extracts from wood, bark, and other vegetable materials, as well as establishments primarily engaged in manufacturing natural dyeing materials from wood, bark, and other vegetable and animal materials. Establishments primarily engaged in manufacturing synthetic dyeing materials are classified in Industry 2822, Intermediates and Organic Colors. Synthetic tanning materials are classified in Industry 2829, Organic Chemicals, Not Elsewhere Classified, chromium compounds are classified in Industry 2819, Inorganic Chemicals, Not Elsewhere Classified, and leather assistants and finishes in Industry 2843, Sulfonated Oils and Assistants.

As indicated above, the (S.I.C.) title and content of Industry 2865 has been amended by the Bureau of the Budget to include former Industry 2864, Natural Dyeing Materials. For a detailed list of primary products of Industry 2865 refer to Table 6A, product codes 2865111 to 2865251.

The value of shipments of Industry 2865, Tanning and Dyeing Materials, in 1954 totaled about \$14 million. This included shipments of primary products (natural tanning and dyeing materials) valued at \$11 million, shipments of secondary products valued at \$2 million, and miscellaneous receipts (mainly receipts from sale of scrap and salable refuse) of less than \$1 million.

Industry 2865 shipments of primary products in 1954 represented 83 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 88 percent.

Industry 2865 shipments of natural tanning and dyeing materials in 1954 represented 92 percent of these products valued

at \$12 million shipped by all industries. In 1947, this coverage ratio was 78 percent.

#### 2871—Fertilizers (Full Standard Industrial Classification Title: Fertilizers, Manufacturing and Mixing)

This industry comprises establishments primarily engaged in manufacturing mixed fertilizers (mixtures containing nitrogen, phosphoric acid ( $P_2O_5$ ) or potash), from one or more fertilizer materials produced in the same establishment. Sulfuric acid plants operated in conjunction with fertilizer plants and separately reported are classified in Industry 2811, Sulfuric Acid. Establishments primarily engaged in manufacturing fertilizer materials, such as muriate and sulfate of potash, or nitrogenous compounds, (such as ammonium sulfate and ammonium nitrate), but which are not engaged in manufacturing mixed fertilizers, are classified in Industry 2819, Inorganic Chemicals, N.E.C. Establishments primarily engaged in manufacturing mixed fertilizers from purchased fertilizer materials are classified in Industry 2872, Fertilizers, Mixing Only; and establishments primarily engaged in mixing, milling or otherwise preparing natural potassium, boron, or sodium compounds (other than common salt) are classified in Mineral Industry 1474, Potash, Soda, and Borate Minerals.

Rendering plants manufacturing tankage, meat scraps, bone meals, and dried blood for fertilizer, are classified in Industry 2886, Grease and Tallow, and plants primarily engaged in manufacturing inoculants for legumes in Industry 2899, Miscellaneous Chemical Products. Municipal sewage disposal plants which make activated sewage sludge are not included in the 1954 (Economic) Censuses.

For a detailed list of primary products of Industry 2871, refer to Table 6A, product codes 2871111 to 2871371.

The value of shipments of Industry 2871, Fertilizers, in 1954 totaled over \$533 million. This included shipments of primary products (fertilizers, manufactured and mixed) valued at \$512 million, shipments of secondary products valued at \$19 million, and miscellaneous receipts of \$3 million. Receipts for merchandising (products bought and resold without further manufacture or processing) valued at \$56 million are excluded from the \$533 million value of shipments of Industry 2871. Data relating to these merchandising receipts are also excluded from the cost of materials and value added, but these activities are reflected in other detailed industry statistics, mainly employment and inventory.

Industry 2871 shipments of fertilizers in 1954 represented 96 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 92 percent. Secondary products shipped by this industry in 1954 consisted mainly of sulfuric acid, \$7 million; industrial inorganic chemicals, \$5 million; insecticides and fungicides for agricultural use, \$4 million; and other products, \$2 million.

Industry 2871 shipments of fertilizer (manufactured and mixed) in 1954 represented 60 percent of these products valued at \$855 million shipped by all manufacturing industries. In 1947, this coverage ratio was also 60 percent. The principal other industry shipping fertilizers in 1954 consisted of Industry 2872, Fertilizers, Mixing Only which includes plants mixing fertilizers from purchased materials.

The manufacturing activities of Industry 2871, particularly those in regard to the mixing of fertilizers, are seasonal. Measures of this seasonality are provided by the employment statistics appearing in Table 3, Detailed Statistics for the United States. While these employment data are for the calendar year 1954, the majority of manufacturers furnished commodity and other information for a fiscal year generally ending June 30, 1954.

The data appearing in Table 7, Materials Consumed, By Kind, are limited to the quantities used in the manufacture of superphosphate and mixed fertilizers by plants primarily engaged in such activities and whose average employment totaled six or more. Because of the increasing use of liquid fertilizers, for which no separate data were compiled, the quantities shown for

1954 as "fillers" are relatively less than the figures appearing for 1947.

The data shown in Table 6C represent shipments and production by state of origin. Thus, they differ in concept from the figures published by the Bureau of Plant Industry, Soils and Agricultural Engineering, United States Department of Agriculture, which represent the state destination of shipments (or consumption within the state).

Monthly data showing manufacturers' stocks, production, receipts, shipments, and consumption of normal superphosphate, concentrated superphosphate and wet-base goods appear in the Census Bureau's Facts for Industry series M19D, "Superphosphate." The figures appearing in this report differ slightly from the 1954 annual totals appearing in the Facts for Industry series because the Census of Manufactures statistics include some plants reporting on a fiscal year basis.

#### 2872—Fertilizers, Mixing Only

This industry comprises establishments primarily engaged in mixing fertilizers from purchased fertilizer materials. Establishments primarily engaged in manufacturing mixed fertilizers from one or more fertilizer materials produced in the same establishment are classified in Industry 2871, Fertilizers. For a detailed list of primary products of Industry 2872, refer to Table 6A, product codes 287111 to 2871171.

The value of shipments of Industry 2872, Fertilizer, Mixing Only, in 1954 totaled \$329 million. This included shipments of primary products (mixed fertilizers, complete and incomplete mixtures) valued at \$310 million, shipments of secondary products valued at \$17 million, and miscellaneous receipts \$2 million. Receipts for merchandising (products bought and resold without further manufacture or processing) valued at \$85 million are excluded from the \$329 million value of shipments of Industry 2872. Data relating to these merchandising receipts are also excluded from the cost of materials and value added, but these activities are reflected in other detailed industry statistics, mainly employment and inventory.

Industry 2872 shipments of mixed fertilizers in 1954 represented 95 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 98 percent. Secondary products shipped by this industry in 1954 consisted mainly of insecticidal and fungicidal preparations \$4 million and inorganic chemicals, \$1 million.

Industry 2872 shipments of mixed fertilizers in 1954 represented 44 percent of mixed fertilizer valued at \$707 millions shipped by all manufacturing industries. In 1947 this coverage ratio was 47 percent. The principal other industry shipping fertilizers consisted of Industry 2871 Fertilizers which includes plants manufacturing and mixing fertilizers.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments classified in other industries.

## MANUFACTURES--INDUSTRY STATISTICS

Table 1.—GENERAL STATISTICS FOR THE UNITED STATES: 1954 AND EARLIER YEARS

(For explanation of column captions see Introduction)

Industry and census year	Establish- ments, number	All employees		Production workers		Value added by <sup>2</sup> manufacture (\$1,000)	Cost of materials, <sup>3</sup> etc. (\$1,000)	Value of shipments <sup>4</sup> (\$1,000)
		Number <sup>1</sup>	Payroll (\$1,000)	Number <sup>1</sup>	Wages (\$1,000)			
Hardwood distillation (S.I.C. 2861):								
1954.....	34	1,627	5,222	1,384	4,114	7,419	8,586	16,006

1899.....	422	13,293	6,310	11,581	4,185	15,699	28,958	44,657

NA Not available.

<sup>1</sup>For the period 1949-1954, the figures are based on employment for the payroll periods ending nearest the 15th of March, May, August and November. However, in the case of the "Fertilizer" industries a different method was used for 1954; all employees represents the average of 12 monthly figures; production workers was calculated by subtracting from the all employees total the average number of nonproduction employees for March, May, August and November. For 1947, they represent the average of 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the all employees figure represents the sum of the annual average number of production workers and the number of nonproduction workers reported for one payroll period (usually in October).

<sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. See Introduction, "Value Added by Manufacture." For the "Gum naval stores (steam distilled)" and the "Fertilizer" Industries, 1947 value added by manufacture does not equal the published value of products shipped less cost of materials etc. because an estimated value of production was used in the calculation in place of value of products shipped. Since the 1949-1952 figures are estimates derived from 1947 base totals, the same inequality may exist for these years.

<sup>3</sup>Figures for years prior to 1935 do not include cost of contract work.

<sup>4</sup>For 1947-1954, value of shipments; for all other years, value of production except in the case of the "Hardwood distillation" industry for 1929 where the figures represent value of shipments. See Introduction, "Value of Shipments."

<sup>5</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. Estimates with a standard error in excess of 15 percent generally have been omitted from this table.

<sup>6</sup>"Hardwood distillation" and "Softwood distillation" formerly were combined in a single industry. Separate figures are therefore not available prior to 1921.

<sup>7</sup>Includes data for fire stills.

<sup>8</sup>The figures for years prior to 1937 are not sufficiently comparable with those for later years to be shown in this table because of differences in (a) the treatment of employees engaged in the care of turpentine forests and in the gathering and marketing of gum, (b) the definition of cost of materials and value added, and (c) the coverage of the industry in certain years.

<sup>9</sup>No comparable figures are available for prior years.

<sup>10</sup>The returns for 1939 have been retabulated to provide figures comparable with those for 1947. "Fertilizers" and "Fertilizers (mixing only)" formerly constituted a single classification. The separate industry figures shown for 1939-1954 have been combined in order that statistics can be shown for the entire period 1899-1954.

## MANUFACTURES—INDUSTRY STATISTICS

Table 2.—GENERAL STATISTICS BY REGIONS AND STATES: 1954 AND 1947  
(For explanation of column captions see Introduction)

Industry, region, and State <sup>1</sup>	1954										1947		
	Establishments, number		All employees		Production workers			Value added by manufacture (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments (\$1,000)	Capital expenditures, new (\$1,000)	All employees, number	Value added by manufacture (\$1,000)
	Total	20 or more employees	Number	Payroll (\$1,000)	Number	Man-hours (1,000)	Wages (\$1,000)

Note: Detailed figures may not add to the totals because of independent rounding.

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup>General statistics for some producing States are not shown separately in the table (see INTRODUCTION "Confidentiality of Data for Individual Companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1954.

S.I.C. 2861, Hardwood Distillation: Northeast and North Central—New Hampshire, 1 (1-19); Connecticut, 1 (1-19); New York, 2 (1-19); Pennsylvania, 6 (100-249); Ohio, 5 (20-99); Illinois, 2 (1-19); Michigan, 3 (500-999); Missouri, 6 (20-99); South and West—West Virginia, 2 (1-19); Tennessee, 2 (250-499); Arkansas, 1 (100-249); Oklahoma, 1 (1-19); California, 2 (1-19).

S.I.C. 2862, Softwood Distillation: Northeast and North Central—New Hampshire, 1 (1-19); Massachusetts, 1 (1-19); New York, 1 (1-19); Missouri, 1 (1-19); South and West—Georgia, 1 (500-999); Florida, 5 (500-999); Alabama, 3 (100-249); Texas, 1 (1-19); Washington, 1 (1-19).

S.I.C. 2863, Gum Naval Stores: South—Georgia, 19 (250-499); Florida, 4 (20-99); Alabama, 3 (20-99).

S.I.C. 2865, Tanning and Dyeing Materials: Northeast and North Central—Massachusetts, 4 (20-99); New York, 5 (20-99); Pennsylvania, 2 (100-249); Illinois, 3 (20-99); South and West—Maryland, 1 (100-249); Virginia, 2 (20-99); North Carolina, 2 (1-19); Tennessee, 2 (100-249); Texas, 1 (1-19); California, 1 (1-19).

S.I.C. 2871, Fertilizers: New England—Maine, 3 (20-99); Massachusetts, 3 (100-249); Middle Atlantic—New York, 2 (100-249); Pennsylvania, 3 (250-499); East North Central—Michigan, 5 (250-499); Wisconsin, 4 (100-249); West North Central—Nebraska, 2 (20-99); Kansas, 3 (20-99); South Atlantic—Delaware, 3 (20-99); South Carolina, 12 (500-999); East South Central—Kentucky, 4 (20-99); West South Central—Arkansas, 3 (250-499); Oklahoma, 4 (100-249); Mountain—Montana, 2 (250-499); Idaho, 2 (100-249); Utah, 2 (20-99); Pacific—Washington, 3 (20-99); California, 5 (20-99).

S.I.C. 2872, Fertilizers, Mixing Only: New England—Maine, 11 (100-249); Vermont, 1 (1-19); Massachusetts, 5 (20-99); Rhode Island, 2 (1-19); Connecticut, 5 (100-249); Middle Atlantic—New York, 23 (250-499); Pennsylvania, 28 (250-499); East North Central—Michigan, 3 (100-249); Wisconsin, 8 (100-249); West North Central—North Dakota, 1 (20-99); Nebraska, 9 (20-99); South Atlantic—Delaware, 6 (20-99); West Virginia, 1 (20-99); South Carolina, 36 (500-999); East South Central—Mississippi, 6 (20-99); West South Central—Arkansas, 8 (100-249); Oklahoma, 2 (1-19); Mountain—Idaho, 1 (1-19); Colorado, 6 (20-99); New Mexico, 1 (1-19); Arizona, 3 (20-99); Utah, 2 (20-99); Pacific—Washington, 9 (20-99); Oregon, 4 (20-99); California, 53 (1,012).

## MANUFACTURES—INDUSTRY STATISTICS

Table 3.—DETAILED STATISTICS FOR THE UNITED STATES: 1954

(For explanation of line captions see Introduction)

Item	Hardwood distillation (S.I.C. 2861) all estab- lishments	Softwood distillation (S.I.C. 2862)		Gum naval stores (S.I.C. 2863) all estab- lishments
		All estab- lishments	Establish- ments with 90% or more primary prod- uct special- ization	
Primary product specialization ratio <sup>1</sup> .....	91	68	xxx	88
Coverage ratio <sup>2</sup> .....	100	98	xxx	95

Electric motors driven by energy generated at the establishment.....do.....	(7)	(7)	8	1

Note: Detailed figures may not add to the totals because of independent rounding. xxx Not applicable. NA Not available. <sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.) Columns containing totals for establishments with 90% or more primary product specialization are shown only for those industries having a primary product specialization of less than 90%. Data for Industry 2863, Gum Naval Stores, are withheld to avoid disclosing figures for establishments having a specialization ratio of less than 90%. <sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry. <sup>3</sup>Less than \$500 thousand. <sup>4</sup>Less than 500 tons. <sup>5</sup>Less than \$5,000. <sup>6</sup>Less than 500 thousand kwh. <sup>7</sup>Less than 500 hp.

## MANUFACTURES—INDUSTRY STATISTICS

Table 4.—SELECTED STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY EMPLOYMENT SIZE, FOR THE UNITED STATES: 1954

(Value figures in thousands of dollars. For explanation of line captions see Introduction. Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted and the combined figure is underlined and shown in the size-class to the left)

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.)

<sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry.

## GUM AND WOOD CHEMICALS; FERTILIZERS

28F-11

Table 5B.—INDUSTRY-PRODUCT ANALYSIS--SHIPMENTS BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954

(In thousands of dollars. The first column shows the total value of shipments of the specified industry divided among: (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products) and (c) miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other Industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed. The last column shows the total value of shipments of the primary products of the industry by all manufacturing industries)

Prod. class code	Hardwood distillation industry	Hardwood distillation (S.I.C. 2861)	Other industries	All industries	Prod. class code	Tanning and dyeing materials industry	Tanning and dyeing materials (S.I.C. 2865)	Other industries	All industries

xxx Not applicable.

NA Not available.

<sup>1</sup>Includes glacial acetic acid. In addition, production of synthetic acetic acid totaled 442,007,000 pounds, data for which are compiled by the U. S. Tariff Commission. Data for synthetic acetic acid included in total for product code 2829311.

<sup>2</sup>Production figures represent total primary production including quantities which are subsequently used in producing other modifications.

<sup>3</sup>In addition, production of synthetic methanol totaled 1,118,477,000 pounds, data for which are compiled by the U. S. Tariff Commission. Data for synthetic methanol included in total for product code 2829311.

<sup>4</sup>Includes a small amount of kln and pit charcoal.

<sup>5</sup>Excludes data for sulfate wood turpentine, the production of which according to the U. S. Department of Agriculture amounted to 10,226,500 gallons for calendar 1954 and 6,864,350 gallons for calendar year 1947, on a refined basis.

<sup>6</sup>Excludes pine reported as such.

<sup>7</sup>For 1947, data include information for fire stills, the production of which, as reported to the Bureau of Agricultural Economics, Department of Agriculture, was as follows: turpentine, 39,821 bbls.; rosin, 106,171 drums; reclaimed gum rosin, 6,709 drums. The 1947 data include an estimated market value totaling less than 3 percent for turpentine and rosin distilled for oils (toll stilling).

<sup>8</sup>A tan unit is equal to one pound 100 percent tannin.

<sup>9</sup>Codes 2865213 and 2865251 combined with product code 2865219.

<sup>10</sup>Codes 2865213, 2865217, and 2865231 combined with product code 2865219.

<sup>11</sup>The 1947 figures include data for certain chromium chemicals which in 1954 are classified as product code 2819732, "Other Chromium Compounds."

<sup>12</sup>Includes data for ammonium phosphates and ammonium superphosphates.<sup>13</sup>Code 2871200 included with product code 2871000.<sup>14</sup>Excludes information from municipalities.<sup>15</sup>Excludes data for garbage tangle and bone meal, products primarily to Industry 2886, Grease and Tallow.<sup>16</sup>Data for wet-base goods, code 2871351 included with code 2871311, "Normal superphosphate."<sup>17</sup>Production includes 51,800 tons of 100 percent A.P.A. reported by Tennessee Valley Authority.<sup>18</sup>Production includes quantities reported by all establishments including those classified as "non-manufacturing." The shipment data include only reports by plants classified as "manufacturing."

## MANUFACTURES--INDUSTRY STATISTICS

Table 6B.--VALUE OF PRODUCT CLASSES SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, BY DIVISIONS AND STATES FOR 1954, AND UNITED STATES TOTALS FOR EARLIER YEARS

(In thousands of dollars. Statistics are shown for selected product classes which are economically significant and production of which is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (Table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are listed only if the value of shipments is more than \$1 million and the figure does not disclose individual company information. Additional States which had shipments of more than \$1 million of the individual product classes are listed in footnote 1.)

Florida.....	41,646				

Note: The figures shown for 1950 to 1953 are sample estimates obtained from the Annual Survey of Manufactures for those years. Since the estimates are based on a sample they are subject to sampling variability, that is, they are not the same as figures which would have been obtained if complete censuses had been taken for those years. Measures of the sampling variability (standard errors) of the estimated total value of shipments of each product class are shown in the Annual Survey of Manufactures publications. Also shown are the standard errors of the relative change in shipments between some consecutive Annual Survey years which are the more significant measures when the series is studied for trend.

<sup>1</sup>For the specified product classes, shipments of over \$1 million were reported for the States listed but the exact figures are withheld to avoid disclosure of individual company figures: 28711, Connecticut, Nebraska, Delaware, and Arizona; 28713, New Jersey, Michigan, Wisconsin, Missouri, Montana, Idaho, Utah, and California.

<sup>2</sup>Excludes the value of superphosphates, defluorinated and phosphate rock defluorinated which was classified in 28197, inorganic chemicals, n.e.c., from 1947-1953.

NA Not available. XXX Not applicable. <sup>1</sup>Includes cordwood and mill waste amounting to less than 5 percent of the total quantity, converted at 3,500 pounds per cord for cordwood and 3,000 pounds per cord for mill waste. <sup>2</sup>Includes \$353,851 thousands for establishments classified in Industry 2871, and \$246,141 thousands for establishments classified in Industry 2872. <sup>3</sup>Includes \$193,531 thousands for establishments classified in Industry 2871 and \$135,587 thousands for establishments classified in Industry 2872. <sup>4</sup>Gross weight basis. <sup>5</sup>Includes 18,186 tons of aqua ammonia (NH<sub>3</sub> content). <sup>6</sup>In addition, 760,044 tons (100% A.P.A.) of normal (including a small quantity of wet-base goods) were consumed by establishments producing superphosphate. <sup>7</sup>In addition, 681,789 tons (100% A.P.A.) were consumed by establishments producing superphosphate. <sup>8</sup>In addition, 27,620 tons (100% A.P.A.) were consumed by establishments producing superphosphate. <sup>9</sup>In addition, 4,504 tons (100% A.P.A.) of concentrated and enriched superphosphate were consumed by establishments producing superphosphate. <sup>10</sup>In addition, 27,538 tons (100% A.P.A.) were consumed by establishments producing super phosphate. <sup>11</sup>In addition, 2,804,928 tons (100% H<sub>2</sub>SO<sub>4</sub>) were consumed by establishments with acid producing facilities classified in the fertilizer industries. <sup>12</sup>In addition, 1,864,117 tons (100% H<sub>2</sub>SO<sub>4</sub>) were consumed by establishments with acid producing facilities classified in the fertilizer industries. <sup>13</sup>In addition, 1,321,468 tons (50% H<sub>3</sub>PO<sub>4</sub>) were consumed by establishments with acid producing facilities classified in the fertilizer industries. <sup>14</sup>Included in material code 970000, "All other materials."

Table 8.—GENERAL STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY SPECIALIZATION AND PRIMARY PRODUCT CLASS SPECIALIZATION, FOR THE UNITED STATES: 1954

(This table presents selected statistics for establishments classified according to their degree of specialization in products primary to the industry. The establishments are classified in two ways: (1) by industry specialization—the degree of specialization in all primary products of the industry; and (2) by product-class specialization—the degree of specialization in the largest product class of the establishment. The degree of "industry specialization" for an establishment represents the ratio of its primary product shipments to its total product shipments, primary and secondary. The degree of "product-class specialization" for an establishment represents the ratio of its largest product class shipments to its total product shipments, primary and secondary. Data are not shown for some industries, product classes, and specialization ranges for a variety of reasons, consequently, detailed figures frequently do not add to the totals. See Introduction for detailed explanation)

Ind. or product class No.	Industry or product class by percent of specialization	Estab- lish- ments, number	All employees		Production workers			Value added by manufacture (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments (\$1,000)

	Less than 50% specialization.....	3	294	851	247	590	692	1,955	3,297	5,252

<sup>1</sup>This class includes data for establishments with less than 50% specialization in the primary products of the industry and establishments engaged exclusively in contract work defined in the industry. Miscellaneous small statistical adjustments are also included.

## Vegetable and Animal Oils

This report shows 1954 Census of Manufactures statistics for establishments classified in each of the following industries:

Code	Title
2881	- Cottonseed Oil Mills
2882	- Linseed Oil Mills
2883	- Soybean Oil Mills
2884	- Vegetable Oil Mills, Not Elsewhere Classified
2886	- Grease and Tallow
2887	- Fatty Acids
2889	- Animal Oils, Not Elsewhere Classified

Industry Group 288 comprises establishments primarily engaged in extracting vegetable and animal oils. Mills classified in this group also frequently engage in activities beyond the extracting stage such as refining (alkali or caustic treatment of the oil), hydrogenating, blowing, blending, and fractionating of inedible oils. Establishments primarily engaged in manufacturing shortening and other edible fats and oils by such processes as

deodorization, winterization, and hydrogenation are classified in Industry 2092, Shortening and Cooking Oil; Industry 2093, Margarine and Industry 2094, Corn Wet Milling. Establishments primarily engaged in refining oils for medicinal purposes are classified in Industry 2833, Medicinal Chemicals; in distilling and refining natural essential oils, in Industry 2892, Essential Oils; manufacturing sulfonated oils in Industry 2843, Sulfonated Oils and Assistants; and establishments primarily engaged in rendering lard are classified in Industry 2011, Meat Packing Plants.

Establishments which extract vegetable oils frequently are engaged in other operations at the same location, and those which refine edible oils generally continue the processing of these oils into such end products as shortening, margarine, and cooking and salad oils. Measures of this integration appear in the table below, which presents, by industry classification, the quantities of specified oils produced and consumed in the same establishment:

PRODUCTION OF SPECIFIED VEGETABLE OILS, BY INDUSTRIAL CLASSIFICATION OF PRODUCING ESTABLISHMENTS: 1954  
(Figures in thousands of pounds)

NA Not available.

D Included in "Other industries" to avoid disclosure of figures for individual companies.

<sup>1</sup>None of these oils produced by establishments classified in Industry 2093, Margarine.

<sup>2</sup>Oil treated by alkali or caustic wash.

The vegetable oil mill extraction process yields crude oil and byproduct cake and meal. The value of shipments of the byproducts represents a significant portion of the total shipments of products primary to each of the industries in this group, ranging from 54 percent for the products primary to Industry 2883, Soybean Oil Mills to 14 percent for Industry 2884, Vegetable Oil Mills, N.E.C., in 1954. Because the vegetable oil crushing equipment may be used for many varieties of seeds or beans, it is also characteristic for many of these plants not to specialize exclusively in the crushing of a specific oil. Thus, some cottonseed oil mills also crush peanuts or soybeans, and soybean oil mills may also crush flaxseed. Thus in reporting data regarding crushing equipment and capacity (see Table 9A below) some establishments indicated the identical number of presses for either cottonseed or soybeans, or other combinations of seeds and beans.

Variations in equipment used vary with the kind of oil as well as with the geographic area. Data for 1954 for cottonseed, flaxseed, and soybean oils appear in Table 9B below; statistics for earlier years, which may be used as a basis to determine the effects of these technological changes on oil yields and other operating characteristics appear in Processing the Three Major Oilseeds and (Marketing Research Report No. 58) and Marketing Activities, June - August 1954, United States Department of Agriculture, Agricultural Marketing Service. Many oil mills perform a considerable amount of warehousing functions because of the storage facilities attached to the plants; the establishment statistics appearing in Tables 1 to 5 exclude value and cost of merchandising but these activities are reflected mainly in employment and inventory statistics for such activities. (See Introduction.)

Activities at the vegetable oil mills are seasonal. Receipts at mills are heavier during the season when the farmer harvests and markets the seed or bean. Crushing of cottonseed generally begins as soon as sufficient seed is on hand to insure continuous operation and about two thirds of the total crush occurs during the 5-month period beginning in October. In contrast, crushing of soybeans is relatively stable throughout the year, while more than half of the beans are received during the 3-month period beginning in October. Details concerning the seasonality of employment appear in Table 3. Monthly data relating to receipts of raw materials and quantities crushed are published by the (Census Bureau) Facts for Industry Series M17-1, Fats and Oils. Information regarding the consumption of fats and oils by class of product also appears in Facts for Industry Series M17-2, Fats and Oils Consumption by End Uses. For most of the products shown in Table 6A, the production figures are in rather close agreement with those compiled and published each month in Facts for Industry Series M17 (for a detailed comparison, see Series M17-1-04). Differences are attributable mainly to fiscal year reporting by a number of large companies in the 1954 Census of Manufactures. Variations in reporting, minor differences in coverage, and misinterpretation of reporting instructions (the census statistics for refined oils include some small quantities of cooking oils and salad oils, which should have been reported as such) are other factors affecting comparability of data from the two surveys.

#### 2881 - Cottonseed Oil Mills

This industry comprises establishments primarily engaged in manufacturing cottonseed oil and byproduct cake, meal, and linters. Establishments primarily engaged in refining cottonseed oil into edible cooking oils are classified in Industry 2092, Shortening and Cooking Oils, or Industry 2093, Margarine. For a detailed list of primary products of Industry 2881, refer to Table 6A, product codes 2881011 to 2881098.

The value of shipments of Industry 2881, Cottonseed Oil Mills, in 1954 totaled \$546 million. This included shipments of primary products (cottonseed oil, cake and meal, linters and hulls) valued at \$520 million, shipments of secondary products valued at \$22 million, and miscellaneous receipts (mainly contract work on material owned by others) of about \$4 million.

Industry 2881 shipments of cottonseed oil mill products in 1954 represented 96 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 90. Secondary products shipped by Industry 2881 in 1954 consisted mainly of soybean oil and meal, \$8 million; mixed fertilizers, \$5 million; and livestock feeds, \$4 million.

Industry 2881 shipments of cottonseed oil mill products in 1954 represented 93 percent of the cottonseed oil mill products, valued at \$560 million shipped by all industries. In 1947, this coverage ratio was 90. Other industries shipping cottonseed oil mill products in 1954 consisted mainly of Industry 2092, Shortening and Cooking Oils, \$22 million; and Industry 2884, Vegetable Oil Mills, N.E.C., \$12 million.

Refined cottonseed oil production (including captive production by establishments which consume the refined oil in manufacturing edible oils and margarine) in 1954 totaled 1,687 million pounds. Of this total, 26 percent was for commercial sale, 1 percent for interplant transfer, and 80 percent for consumption in the same plant, (over 100 percent because of declines in physical inventory during the year). On the basis of total production, Industry 2881 accounted for 13 percent of the total output of refined cottonseed oil; Industry 2092, Shortening and Cooking Oils, 77 percent; Industry 2884, Vegetable Oil Mills, N.E.C., 4 percent; and the remainder by other industries.

Some variation in output among plants occurred because of the equipment used. Historically, the cottonseed processing industry has been primarily a hydraulic press industry, but in the last few years the trend has been toward the more efficient methods of screw press and solvent extraction. Data showing the number of presses, quantities of seed crushed and oil produced for 1954 by method of extraction appear in Tables 9A and 9B. Data for prior periods appear in the United States Department of Agriculture publications, Cottonseed Oil, Mill Characteristics, and Marketing Practices (Agriculture Information Bulletin No. 79), December 1951, and Processing the Three Major Oil Seeds (Marketing Research Report No. 58), April 1954.

#### 2882 - Linseed Oil Mills

This industry comprises establishments primarily engaged in manufacturing linseed oil and byproduct cake and meal. Plants primarily engaged in processing linseed oil (boiled, blown or chemical modified) are also classified in Industry 2882 but those primarily engaged in producing edible cooking oils are classified in Industry 2092, Shortening and Cooking Oils. For a detailed list of primary products of Industry 2882, refer to Table 6A, product codes 2882011 to 2882051.

The value of shipments of Industry 2882, Linseed Oil Mills, in 1954 totaled \$140 million. This included shipments of primary products (linseed oil and meal) valued at \$131 million, shipments of secondary products valued at \$8 million, and miscellaneous receipts of less than \$100 thousand.

Industry 2882 shipments of linseed oil and meal in 1954 represented 94 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 77 percent. Secondary products shipped by Industry 2882 in 1954 consisted mainly of formulated paint vehicles and other vegetable oils, totaling \$8 million.

Industry 2882 shipments of linseed oil and cake in 1954 represented 90 percent of the linseed oil mill products, valued at \$146 million, shipped by all industries. This coverage ratio in 1947 was 87 percent. Other plants shipping linseed oil mill products in 1954 were classified mainly in Industry 2883, Soybean Oil Mills.

About one half of the flaxseed is processed by the screw press method. While separate product statistics for refined linseed were not compiled in the 1954 Census of Manufactures reports, such data are published by the Bureau of the Census in Facts for Industry Series M17-1, Fats and Oils; this report also contains statistics showing receipts of seed, quantities crushed and seeds held at mill by months, as well as data relating to oil and cake and meal production.

### 2883 - Soybean Oil Mills

This industry comprises establishments primarily engaged in manufacturing soybean oil and byproduct cake and meal. Establishments primarily engaged in refining soybean oil into edible cooking oils are classified in Industry 2092, Shortening and Cooking Oils, or Industry 2093, Margarine. For a detailed list of primary products of Industry 2883, refer to Table 6A, product codes 2883011 to 2883098.

The value of shipments of Industry 2883, Soybean Oil Mills, in 1954 totaled \$826 million. This included shipments of primary products (soybean oil, meal and lecithin) valued at \$730 million, shipments of secondary products valued at \$95 million, and miscellaneous receipts of about \$1 million.

Industry 2883 shipments of soybean oil mill products (primary products) in 1954 represented 88 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 96 percent. Secondary products shipped by Industry 2883 in 1954 consisted mainly of prepared animal feeds, \$47 million; shortening and salad oils, \$8 million; and other secondary products, including linseed oils and meals, and other vegetable oils and meals, \$40 million. The increase from 1947 in shipments of prepared animal feeds partly reflects the effects of changes in method of oilseed processing (see below).

Industry 2883 shipments of soybean oil mill products in 1954 represented 96 percent of the soybean oil mill products, valued at \$763 million, shipped by all industries. This coverage ratio in 1947 was 80 percent. Other industries shipping soybean oil mill products in 1954 consisted mainly of Industry 2881, Cottonseed Oil Mills, \$8 million; and other industries including Industry 2092, Shortening and Cooking Oils, \$24 million.

Aggregate output of refined soybean oil (including captive production by establishments which consume the refined oil in manufacturing edible oils and margarine) in 1954 was 2,090 million pounds. Of this total, 11 percent was for commercial sale, and 91 percent for consumption in the same plant, (over 100 percent, because of declines in physical inventory).

On an aggregate basis, Industry 2883 accounted for 8 percent of the total output of refined soybean oil; and Industry 2092, Shortening and Cooking Oils, 86 percent.

In contrast to the other principal vegetable-oil-bearing materials, soybeans are processed principally by the solvent extraction method, which yields more oil per unit of material consumed (see Table 9B below). The quantities processed by the solvent extraction method rose from 27 percent of the 1946-1947 season crush to 93 percent in 1954. The meal obtained by the solvent extraction process contains less oil than that obtained by the hydraulic or screw presses and generally sells for less per pound.

### 2884 - Vegetable Oil Mills, Not Elsewhere Classified

This industry comprises establishments primarily engaged in manufacturing vegetable oils such as tung oil, castor oil, palm kernel oil, peanut oil, coconut oil, and other vegetable oils, not elsewhere classified, and byproduct cake and meal. Establishments primarily engaged in refining vegetable oils into edible cooking oils are classified in Industry 2092, Shortening and Cooking Oils, and Industry 2093, Margarine, and those refining these oils for medicinal purposes in Industry 2833, Medicinal Chemicals. Establishments primarily engaged in shelling peanuts are excluded from manufacturing and classified in trade industries.

For a detailed list of primary products of Industry 2884, refer to Table 6A, product codes 2884011 to 2884098.

The value of shipments of Industry 2884, Vegetable Oil Mills, N.E.C., in 1954 totaled \$166 million. This included shipments of primary products (vegetable oils and meals, n.e.c.) valued at \$90 million, shipments of secondary products valued at \$64 million, and miscellaneous receipts (mainly from non-manufacturing activities such as peanut shelling) of \$12 million.

Industry 2884 shipments of primary products in 1954 represented 58 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 80 percent. Secondary products shipped by Industry 2884 in 1954 consisted mainly of cottonseed, and soybean oil mill products \$16 million, shortening and salad oils \$21 million, and fatty acids, \$4 million.

Industry 2884 shipments of primary products, (vegetable oils and cake and meal, n.e.c.) in 1954 represented 80 percent of these products valued at \$113 million, shipped by all industries. This coverage ratio in 1947 was 89 percent. Other industries shipping vegetable oil mill products, n.e.c., in 1954 consisted mainly of Industry 2092, Shortening and Cooking Oils, \$11 million.

The aggregate output of vegetable oils, n.e.c., in 1954 significantly exceeded shipments of peanut, coconut, castor bean, and babassu oils (see Table 6A) because of captive production by establishments which consume the crude or refined oils in further processing operations. On an aggregate basis, the 1954 coverage ratio of Industry 2884 would be somewhat less than the ratio given above as derived from shipment data.

### 2886 - Grease and Tallow

This industry comprises establishments primarily engaged in rendering inedible grease and tallow from animal fat, bones, and meat scraps. Plants classified in this industry usually render grease and tallow from secondary sources, such as materials from restaurants and butcher shops, and from dead stock. Tankage, meat scraps and bonemeal for feed or fertilizer are important byproducts of the rendering process. Establishments primarily engaged in manufacturing lard and other edible animal fats are classified in Major Group 20, Food and Kindred Products, and those primarily producing processed tankage (digested inert organic nitrogenous waste materials such as felt, wool, hair, and feathers) and activated sewage sludge are classified in Industry 2871, Fertilizers. For a detailed list of primary products of Industry 2886, refer to Table 6A, product codes 2886111 to 2886298.

The value of shipments of Industry 2886, Grease and Tallow, in 1954 totaled \$223 million. This included shipments of primary products (grease, tallow, and byproducts) valued at \$195 million, shipments of secondary products valued at \$26 million, and miscellaneous receipts of about \$1 million.

Industry 2886 shipments of grease, tallow and byproducts (primary products) in 1954 represented 88 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 90 percent. Secondary products shipped by this industry in 1954 consisted mainly of hides, skins, and pelts, \$15 million, and fertilizer materials of organic origin, \$3 million.

Industry 2886 shipments of primary products (grease, tallow and byproducts) in 1954 represented 55 percent of these products, valued at \$183 million, shipped by all industries. This coverage ratio for 1947 was 52 percent. The principal other industry shipping grease, tallow, and byproducts in 1954 was Industry 2011, Meat Packing, \$142 million.

Since January 1955, monthly data on grease and tallow rendered in meat packing plants have been published by the Census Bureau in Facts for Industry Series M17-1, Fats and Oils.

In rendering inedible animal wastes, there is a residual, commonly known as tankage, which may be further processed either in the same or other establishments to produce such materials as meat scraps and meat meal. Since 1947, the dollar shipments of tankage and tankage products have accounted for a larger proportion of renders' total shipments. Data showing the monthly production of meat scraps and digester or feed tankage are published by the Agricultural Marketing Service, United States Department of Agriculture.

### 2887 - Fatty Acids

This industry comprises establishments primarily engaged in manufacturing fatty acids such as stearic acid, oleic acid,

fish and marine fatty acids, coconut-type fatty acids, and other unsaturated fatty acids fractionated from vegetable and animal oils and fats. Establishments primarily engaged in manufacturing low rosin fatty acids are classified in Industry 2611, Pulp Mills, and synthetic organic fatty acids in Industry 2829, Organic Chemicals, N.E.C. For a detailed list of products of Industry 2887, refer to Table 6A, product codes 2887011 to 2887081.

The value of shipments of Industry 2887 in 1954 totaled \$56 million. This included shipments of primary products (fatty acids) valued at \$38 million, and shipments of secondary products valued at \$18 million.

Industry 2887 shipments of fatty acids in 1954 represented 68 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 86 percent. Secondary products shipped by Industry 2887 consisted mainly of glycerin, \$5 million; and other secondary products including miscellaneous acyclic chemicals and other organic chemicals and sulfonated oils and fats, \$13 million.

Industry 2887 shipments of fatty acids in 1954 represented 73 percent of the fatty acids, valued at \$52 million, shipped by all industries. This coverage ratio in 1947 was 76 percent. Production data and the measure of coverage exclude the quantities of fatty acids produced and consumed in soap manufacturing plants.

#### 2889 - Animal Oils, Not Elsewhere Classified

This industry comprises establishments primarily engaged in manufacturing fish oils, marine animal oils and other animal oils, not elsewhere classified. Establishments primarily engaged in refining these oils for medicinal purposes are classified in Industry 2833, Medicinal Chemicals. For a detailed list of

products of Industry 2889, refer to Table 6A, product codes 2889111 to 2889398.

The present Industry 2889 represents a combination of two industries classified separately in the 1947 Census as Industry 2885, Marine Animal Oils, and Industry 2889, Animal Oils, N.E.C. The 1945 edition of the Standard Industrial Classification was amended by the Bureau of the Budget to put the combination into effect.

The value of shipments of Industry 2889, Animal Oils, N.E.C., in 1954 totaled \$65 million. This included shipments of primary products (animal oils, n.e.c., soap stock and marine animal oils), valued at \$58 million, shipments of secondary products valued at \$7 million, and miscellaneous receipts of less than \$1 million.

Industry 2889 shipments of primary products in 1954 represented 89 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 94 percent. Secondary products shipped by Industry 2889 in 1954 consisted mainly of fatty acids, \$4 million, and other secondary products, \$3 million.

Industry 2889 shipments of primary products (animal oils, n.e.c.) in 1954 represented 66 percent of these products, valued at \$88 million, shipped by all industries. This coverage ratio in 1947 was 39 percent. The change in coverage ratio is primarily caused by the fact that in 1954 data for edible and inedible stearin were reported separately and considered primary to Industries 2011 and 2889. Such distinctions were not made in 1947. Other industries shipping animal oils, n.e.c., consisted mainly of Industry 2011, Meat Packing, and Industry 2092, Shortening and Cooking Oils, the totals of these and other industries being \$30 million.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments classified in other industries.

## VEGETABLE AND ANIMAL OILS

28G-5

Table 1.—GENERAL STATISTICS FOR THE UNITED STATES: 1954 AND EARLIER YEARS

(For explanation of column captions see Introduction)

Industry and census year	Establishments, number	All employees		Production workers		Value added by manufacture <sup>2</sup> (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments <sup>3</sup> (\$1,000)

NA Not available.

<sup>1</sup>For 1954, the figure for all employees represents the average number for the payroll period ended nearest the fifteenth of each month; the figure for production workers was calculated by subtracting from this all employees total the average number of nonproduction employees for the four months for which such information was collected: March, May, August and November. However, for the Grease and Tallow Industry both all employees and production workers for 1954 are based on average employment for March, May, August and November. For the period 1949-1953, both figures were calculated in this way for all the industries shown in this table. For 1947, all employees and production workers were both derived from 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the figure for all employees represents the sum of the annual average number of production workers and the number of nonproduction employees for one payroll period (usually in October).

<sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. See Introduction, "Value Added by Manufacture." For the "Grease and tallow" industry, 1947 value added by manufacture does not equal the published value of shipments less cost of materials, etc. because an estimated value of production was used in the calculation in place of value of shipments. Since the 1949-1952 estimates were derived from 1947 base totals, the same inequality exists for these years.

<sup>3</sup>For 1929 and 1947-1954, value of shipments; for all other years, value of production. See Introduction, "Value of Shipments."

<sup>4</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. Estimates with a standard error in excess of 15 percent generally have been omitted from this table.

<sup>5</sup>Figures for 1939 exclude data for two establishments primarily engaged in making soy flour in order to avoid disclosing their operations. These establishments are included in "Flour and meal" for 1939.

<sup>6</sup>"Soybean oil mills" were formerly included with the discontinued industry "Oils, n.e.c." Separate figures are not available for years prior to 1937.

<sup>7</sup>The 1939 data have been retabulated to provide figures comparable with those for 1947. No comparable figures are available for prior years.

<sup>8</sup>Includes data for plants previously classified in Industry 2885, Marine Animal Oils.

## VEGETABLE AND ANIMAL OILS

28G-7

Table 2.—GENERAL STATISTICS BY REGIONS AND STATES: 1954 AND 1947

Note: Detailed figures may not add to the totals because of independent rounding.

<sup>1</sup> Withheld to avoid disclosing figures for individual companies.<sup>2</sup> General statistics for some producing States are not shown separately in the table (See INTRODUCTION "Confidentiality of Data for Individual Companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1954:

S.I.C. 2881, Cottonseed Oil Mills: South Atlantic—North Carolina, 20 (500-999); South Carolina, 24 (500-999); All Other Divisions—Illinois, 1 (20-99); Missouri, 1 (20-99); New Mexico, 3 (100-249); Arizona, 6 (500-999).

S.I.C. 2882, Linseed Oil Mills: All Other Divisions—New York, 2 (100-249); Pennsylvania, 1 (20-99); Ohio, 1 (100-249); Texas, 1 (20-99); Montana, 1 (1-19); California, 1 (20-99).

S.I.C. 2883, Soybean Oil Mills: West North Central—Nebraska, 2 (20-99); Kansas, 4 (20-99); South—Delaware, 1 (1-19); North Carolina, 1 (1-19); Florida, 1 (20-99); Kentucky, 3 (100-249); Tennessee, 3 (20-99); Alabama, 1 (1-19); Arkansas, 1 (1-19); All Other Divisions—New Jersey, 2 (250-499); California, 3 (20-99).

S.I.C. 2884, Vegetable Oil Mills, N.E.C.: Northeast and North Central—New York, 1 (20-99); New Jersey, 4 (500-999); Pennsylvania, 1 (1-19); Ohio, 1 (20-99); Missouri, 1 (100-249); South Atlantic—Maryland, 2 (20-99); Virginia, 2 (100-249); Florida, 4 (100-249); East South Central—Alabama, 2 (20-99); Mississippi, 2 (1-19); West South Central—Louisiana, 5 (20-99); Oklahoma, 4 (20-99); Texas, 4 (20-99); West—New Mexico, 1 (20-99); Arizona, 1 (1-19); Washington, 1 (1-19); California, 10 (250-499).

S.I.C. 2886, Grease and Tallow: New England—Maine, 3 (20-99); New Hampshire, 1 (20-99); Vermont, 1 (1-19); Rhode Island, 4 (20-99); Connecticut, 2 (100-249); North Central—Indiana, 20 (250-499); Michigan, 13 (500-999); Missouri, 12 (100-249); North Dakota, 1 (1-19); South Dakota, 5 (20-99); Nebraska, 17 (100-249); South Atlantic—Delaware, 2 (1-19); Maryland, 9 (100-249); District of Columbia, 1 (20-99); Virginia, 8 (100-249); West Virginia, 2 (1-19); South Carolina, 1 (1-19); East South Central—Kentucky, 6 (20-99); Tennessee, 9 (20-99); Alabama, 4 (20-99); Mississippi, 4 (20-99); West South Central—Arkansas, 6 (20-99); Louisiana, 4 (20-99); Oklahoma, 5 (20-99); Texas, 20 (250-499); Mountain—Montana, 3 (1-19); Idaho, 2 (20-99); Wyoming, 1 (1-19); Colorado, 8 (100-249); New Mexico, 1 (1-19); Arizona, 3 (20-99); Utah, 3 (20-99); Nevada, 1 (1-19); Pacific—Washington, 11 (100-249); Oregon, 9 (20-99).

S.I.C. 2887, Fatty Acids: Middle Atlantic—New Jersey, 2 (100-249); Pennsylvania, 2 (100-249); East North Central—Ohio, 2 (250-499); Indiana, 1 (100-249); Illinois, 4 (500-999); South and West—Tennessee, 2 (20-99); Texas, 1 (1-19); Pacific—California, 1 (20-99).

S.I.C. 2889, Animal Oils N.E.C.: New England—Maine, 5 (20-99); New Hampshire, 1 (1-19); Massachusetts, 4 (20-99); Middle Atlantic—New York, 3 (20-99); Pennsylvania, 2 (20-99); All Other Divisions—Indiana, 1 (1-19); Michigan, 1 (100-249); Delaware, 2 (250-499); Maryland, 1 (1-19); South Carolina, 1 (1-19); Florida, 2 (20-99); Mississippi, 2 (20-99); Texas, 1 (100-249); Utah, 1 (1-19); Washington, 5 (20-99); Oregon, 2 (20-99).

Electric motors driven by energy generated at the establishment.....do...	9	...	1	...	3	3

NOTE: Detailed figures may not add to the totals because of independent rounding. NA Not available. <sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.) Columns containing totals for establishments with 90 percent or more primary product specialization are shown only for those industries having a primary product specialization ratio of less than 90 percent. <sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry. <sup>3</sup>Less than 500 tons. <sup>4</sup>Less than \$500 thousand.

	1947..	42,940	39,917	2,468	555	94	101,969	39,917	62,052	39

<sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its total shipments of all products. (The primary products are listed in Tables 5A and 6A; the first 4-digits of the product code represent the industry code to which the product is primary.)

<sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry.

<sup>3</sup>In 1954 data for edible and inedible stearin were reported separately and considered primary, respectively, to Industry 2011, Meat Packing and Industry 2889, Animal Oils, N.E.C. Since such distributions could not be made with the 1947 data, this ratio is not strictly comparable with that for 1954.

## MANUFACTURES--INDUSTRY STATISTICS

Table 5B.--INDUSTRY-PRODUCT ANALYSIS; SHIPMENTS BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954

(In thousands of dollars. The first column shows the total value of shipments of the specified industry divided among: (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products), and (c) miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other Industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns, provided that the figures for individual companies are not thereby disclosed. The last column shows the total value of shipments of the primary products of the industry by all manufacturing industries)

<sup>1</sup> Principally shortening and salad oils (code 28920), poultry feeds (code 20421) and other vegetable oil mill products (code 28840).

<sup>2</sup> Shipped principally by establishments classified in Industry 2883, Soybean Oil Mills.

<sup>3</sup> Principally formulated paint vehicles (code 28512), cottonseed oil mill products (code 28810) and other vegetable oil mill products (code 28840).

<sup>4</sup> Shipped principally by establishments classified in Industry 2092, Shortening and Cooking Oils.

<sup>5</sup> Principally grain mill products (20414), dog and cat food (code 20423), linseed oil mill products (code 28820) and other vegetable oil mill products (code 28840).

<sup>6</sup> Principally, margarine (code 20930), miscellaneous acyclic chemicals (code 28293), chemical specialties (code 28993), inorganic and organic medicinals uncompounded (code 28332) and sulfonated oils and fats (code 28430).

<sup>7</sup> Principally glues and adhesives (code 28941), other meat packing products (code 20117), mixed fertilizers (code 28711) and other vegetable oil mill products (code 28840).

<sup>8</sup> Principally miscellaneous acyclic chemicals (code 28293), other synthetic organic chemicals (code 28294), and sulfonated oils and fats (code 28430).

<sup>9</sup> Principally shipped by establishments classified in Industry 2011, Meat Packing Wholesale.

<sup>10</sup> Principally fatty acids (code 28870) and inedible grease and tallow (code 28861).

xxx Not applicable.

NA Not available.

D Not shown to avoid disclosing figures for individual companies.

<sup>1</sup>Oil treated by alkali or caustic wash. Shipment data exclude amounts of these refined oils which have been further processed by bleaching, deodorizing, and/or winterizing, and by hydrogenation. (See Industry 2092, Shortening and Cooking Oils.)<sup>2</sup>Includes data for refined, boiled, blown, heat treated, or chemically modified oil.<sup>3</sup>The 1947 figures showing production of 1,382,205,000 pounds and shipments of 413,401,000 pounds, valued at \$115,276,000 represent principally data for edible oils, which are now classified as primary to Industry 2092. (See product code 2092041.)<sup>4</sup>Based on data collected by the Agricultural Marketing Service, U. S. Department of Agriculture.<sup>5</sup>1954 statistics do not include tung oil produced for growers on a contract basis (total quantity produced as reported on Census Bureau Monthly Survey M17A was 32,647 thousand pounds).<sup>6</sup>See Industry 2011, Meat Packing, for information on edible tallow.<sup>7</sup>Codes 2886211, 2886213, 2886215, 2886221, 2886241, and 2886245 combined with code 2886298.<sup>8</sup>Includes \$2,525,000 reported as "Other products."

## VEGETABLE AND ANIMAL OILS

28G-17

Table 6B.--VALUE OF PRODUCT CLASSES SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, BY DIVISIONS AND STATES FOR 1954, AND UNITED STATES TOTALS FOR EARLIER YEARS

(In thousands of dollars. Statistics are shown for selected product classes which are economically significant and production of which is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (Table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are listed only if the value of shipments is more than \$1 million and the figure does not disclose individual company information. Additional States which had shipments of more than \$1 million of the individual product classes are listed in footnote 1)

Note: The figures shown for 1950 to 1953 are sample estimates obtained from the Annual Survey of Manufactures for those years. Since the estimates are based on a sample they are subject to sampling variability, that is, they are not the same as figures which would have been obtained if complete censuses had been taken for those years. Measures of the sampling variability (standard errors) of the estimated total value of shipments of each product class are shown in the Annual Survey of Manufactures publications. Also shown are the standard errors of the relative change in shipments between some consecutive Annual Survey years which are the more significant measures when the series is studied for trend.

<sup>1</sup>For the specified product classes, shipments of over \$1 million were reported for the States listed but the exact figures are withheld to avoid disclosure of individual company figures: 28830, New Jersey, Indiana, Nebraska, Kansas, North Carolina, Georgia, Florida, Tennessee, Mississippi, and California; 28840, Ohio, Illinois, Minnesota, Missouri, Maryland, Florida, Oklahoma, and Texas; 28861, Connecticut and South Dakota; 28862, South Dakota; 28870, Pennsylvania, Ohio, Indiana, Illinois, Michigan, Tennessee, and California; 28893, New York, Michigan, Delaware, Maryland, North Carolina, Florida, and Louisiana.

Table 8.—GENERAL STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY SPECIALIZATION AND PRIMARY PRODUCT CLASS SPECIALIZATION, FOR THE UNITED STATES: 1954

(This table presents selected statistics for establishments classified according to their degree of specialization in products primary to the industry. The establishments are classified in two ways: (1) by industry specialization—the degree of specialization in all primary products of the industry; and (2) by product-class specialization—the degree of specialization in the largest product class of the establishment. The degree of "industry specialization" for an establishment represents the ratio of its primary product shipments to its total product shipments, primary and secondary. The degree of "product-class specialization" for an establishment represents the ratio of its largest product class shipments to its total product shipments, primary and secondary. Data are not shown for some industries, product classes, and specialization ranges for a variety of reasons, consequently, detailed figures frequently do not add to the totals. See Introduction for detailed explanation)

Ind. or product class No.	Industry or product class by percent of specialization	Establishments, number	All employees		Production workers			Value added by manufacture (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments (\$1,000)

D Withheld to avoid disclosing figures for individual companies.

<sup>1</sup> The totals for crude cottonseed and soybean oils shown in this report differ by less than 1 percent of the figures shown in Table 6A, because information on crushing facilities for small establishments was not received.<sup>2</sup> Quantities reported for Prepress Solvent Extraction are included in Solvent Extraction.

## Miscellaneous Chemical Products

This report shows 1954 Census of Manufactures statistics for establishments classified in each of the following industries:

Code	Title
2891--	Printing Ink
2892--	Essential Oils
2893--	Toilet Preparations
2894--	Glue and Gelatin
2895--	Carbon Black
2896--	Compressed and Liquefied Gases
2897--	Insecticides and Fungicides
2898--	Salt
2899--	Chemical Products, Not Elsewhere Classified

Many of the establishments classified in this heterogeneous group, particularly those in Industries 2893 and 2896, are also engaged in merchandising activities. Receipts for merchandising (products bought and resold without further manufacture) are excluded from value of shipments, cost of materials, and value added, but data for these activities are included in other detailed industry statistics, mainly employment and inventories. The amount of merchandising and the cost of such products sold were reported separately and are shown in Table 3.

### 2891--Printing Ink

This industry comprises establishments primarily engaged in manufacturing printing ink, gold and bronze inks, and lithographic ink.

Establishments primarily engaged in manufacturing writing and stamp pad inks are classified in Industry 2899, Chemical Products, N.E.C.; and varnishes for printers' inks in Industry 2851, Paints and Varnishes. For a detailed list of primary products of Industry 2891, refer to Table 6A, product codes 2891011 to 2891098.

The value of shipments of Industry 2891, Printing Ink, in 1954 totaled \$181 million. This included shipments of primary products (printing ink) valued at \$163 million, shipments of secondary products valued at \$18 million, and a negligible amount for miscellaneous receipts.

Industry 2891 shipments of printing ink in 1954 represented 90 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 92 percent. Secondary products shipped by Industry 2891 in 1954 consisted mainly of raw materials for printing inks, such as varnishes and allied products, such as paints, \$10 million; and other miscellaneous products, such as dyes and organic colors, totaling \$8 million.

Industry 2891 shipments of printing ink in 1954 represented 95 percent of the printing ink, valued at \$172 million, shipped by all industries. The comparable 1947 coverage ratio was 98 percent.

The manufacture of printing inks is more comparable to that of paints and is quite dissimilar to the manufacture of ordinary writing inks. In addition to mixing such materials as color pigments, oils, varnishes, and driers, many of these plants blend in order that the ink sold may meet the hue and color and other specifications of the customer who prints on paper, plastic, cloth, or other material. Blending is also done at facilities where the employees are primarily engaged in storing and selling. While no measure of such blending activities was secured in the 1954 Census, some plants with blending facilities were classified in Wholesale Trade in 1954. In the 1947 Census, these plants accounted for about 6 percent of the total employment and about 3 percent of the total shipments reported for Industry 2891.

The commodity data for this industry were collected on the basis of end use, for example, letter press, lithography and textile inks. Only to the extent that inks may vary according with their end use is information available concerning their composition. The Bureau of Mines, U. S. Department of the Interior, in its Mineral Industry Surveys, reports that 48,799,000 pounds of carbon black were sold to ink companies in 1954 compared with 32,260,000 pounds in 1947. Quantities of specified animal and vegetable fats and oils and fatty acids consumed in manufacturing printing ink appear in the Census Bureau's Facts for Industry Series M17-1-04, Animal and Vegetable Fats and Oils, 1954.

### 2892--Essential Oils

This industry comprises establishments primarily engaged in distilling, expressing, and refining natural essential oils. Included in this industry are such products as anise oil, citronella oils, eucalyptus oil, lemon oil, orange oil, peppermint oil and wintergreen oil.

Establishments primarily engaged in manufacturing synthetic perfume and flavoring materials are classified in Industry 2829, Industrial Organic Chemicals, N.E.C., and blending and compounding perfume bases and concentrates in Industry 2893, Toilet Preparations. For a detailed list of primary products of Industry 2892, refer to Table 6A, product codes 2892011 to 2892098.

The value of shipments of Industry 2892, Essential Oils, in 1954 totaled \$21 million. This included shipments of primary products (essential oils) valued at \$17 million, shipments of secondary products valued at about \$4 million, and a negligible amount for miscellaneous receipts.

Industry 2892 shipments of essential oils in 1954 represented 83 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 71 percent. Secondary products, mainly industrial organic chemicals and flavoring agents shipped by this industry in 1954 totaled about \$4 million.

Industry 2892 shipments of essential oils in 1954 represented 67 percent of the essential oils, valued at \$26 million, shipped by all industries. The comparable coverage ratio in 1947 was 92 percent. This decline is caused by the fact that essential oils, produced by a large firm, was not its primary product in 1954.

The technology and the relationship of cost of materials to value of products vary with the kind of oil produced. While the oils derived from the citrous fruits--lemon, lime, orange, and grapefruit--are derived by hand or machine pressing, other essential oils such as peppermint, spearmint, and wintergreen are usually produced by steam distillation. The yield based on 5 tons of crude material will also vary from as little as 5 ounces for violet oil to as much as 1,800 pounds for clove oil.

2893--Toilet Preparations (Full Standard Industrial Classification Title: Perfume, Cosmetics and other Toilet Preparations)

This industry comprises establishments primarily engaged in manufacturing perfumes, cosmetics, and other toilet preparations such as toilet water, face powder, rouge, lipstick, personal deodorants, washes and lotions; hair dyes, tonics, dressings, and shampoos; bath salts, manicure preparations, tooth paste, and tooth powder. This industry also includes establishments primarily engaged in blending and compounding perfume bases or primarily engaged in manufacturing shampoos and shaving preparations from purchased soap. Establishments primarily engaged in manufacturing synthetic perfume and flavoring ma-

terials are classified in Industry 2829, Industrial Organic Chemicals, N.E.C.; and soap, and soap products prepared in soap kettles located at the same plant, in Industry 2841, Soap and Glycerin.

In the 1947 Census establishments primarily engaged in manufacturing mouthwashes, including gargles and rinses, were classified in Industry 2834, Pharmaceutical Preparations. In 1954, this item is classified in Industry 2893. No retabulations of the 1947 data have been made since this change does not significantly affect industry (establishment) data. For other comments concerning classification, see report MC-28C, Drugs and Medicines. For a detailed list of primary products of Industry 2893, refer to Table 6A, product codes 2841331 to 2841341 and 2893111 to 2893498.

The value of shipments of Industry 2893, Toilet Preparations, in 1954 totaled \$629 million. This included shipments of primary products (toilet preparations) valued at \$570 million, shipments of secondary products valued at \$54 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$5 million.

Receipts for merchandising (products bought and resold without further manufacture or processing) valued at \$38 million are excluded from the \$629 million value of shipments of Industry 2893. Data relating to these merchandising receipts are also excluded from the cost of materials and value added by manufacture, but these activities are reflected in other detailed industry statistics, mainly employment and inventory.

Industry 2893 shipments of toilet preparations in 1954 represented 91 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 84 percent. Secondary products shipped by this industry in 1954 consisted mainly of soaps, \$14 million, pharmaceutical preparations, \$21 million, and miscellaneous products, \$12 million.

Industry 2893 shipments of toilet preparations in 1954 represented 77 percent of the toilet preparations, valued at \$744 million, shipped by all industries. The comparable coverage ratio in 1947 was 72 percent. Other industries shipping toilet preparations in 1954 consisted mainly of Industry 2841, Soap and Glycerin, \$121 million, and Industry 2834, Pharmaceutical Preparations, \$29 million.

Only dollar figures representing the cost of denatured ethyl alcohol purchased by establishments employing six or more employees and consuming \$5,000 or more are shown in Table 7. Data showing the quantities of specially denatured alcohol consumed in specified toilet preparations are published by the Internal Revenue Service. Quantities of specified animal and vegetable fats and oils and fatty acids consumed in manufacturing toilet preparations appear in the Census Bureau's Facts for Industry Series M17-1-04, Animal and Vegetable Fats and Oils, 1954.

#### 2894--Glue and Gelatin

This industry comprises establishments primarily engaged in manufacturing (1) industrial and household adhesives, glues, and cements from vegetable or animal materials including purchased casein and synthetic resins; and (2) edible, technical, photographic, or pharmaceutical gelatins from animal material. Establishments primarily engaged in manufacturing rubber cement are classified in Industry 3099, Rubber Industries, N.E.C.; dessert preparations with gelatin base in Industry 2099, Food Preparations, N.E.C.; vegetable gelatin or agar-agar in Industry 2832, Botanical Products; and dental glue and cements in Industry 3843, Dental Equipment and Supplies.

The S.I.C. definition for Industry 2894 has been amended by the Bureau of the Budget to include household adhesives, cements, and mucilage. In the 1947 Census of Manufactures (and subsequent Annual Surveys,) these products were classified in Industry 2899, Chemical Products, N.E.C. The 1947 Census data have been revised to reflect this change and are comparable with 1954; comparable data for the intervening years are not available. For a detailed list of primary products of Industry 2894, refer to Table 6A, product codes 2894111 to 2894298.

The value of shipments of Industry 2894, Glue and Gelatin, in 1954 totaled \$139 million. This included shipments of primary products (glue and gelatin) valued at \$121 million, shipments of secondary products valued at \$17 million, and miscellaneous receipts of \$1 million.

Industry 2894 shipments of glue and gelatin in 1954 represented 87 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 82 percent. Secondary products shipped by this industry in 1954 consisted mainly of grease and tallow, \$4 million; feed and fertilizer by products, \$2 million; and other chemical products, \$11 million.

Industry 2894 shipments of glue and gelatin in 1954 represented 67 percent of the glue and gelatin valued at \$180 million, shipped by all industries. The comparable coverage ratio in 1947 was 76 percent. Other industries mainly Industry 2011, Meat Packing; Industry 2886, Grease and Tallow; and Industry 2823, Plastics Materials, shipped in 1954 glue and gelatin totaling \$59 million.

As indicated in Table 8, few, if any, of the manufacturers of gelatin, produce glue or other adhesives. Yet animal glues and gelatin are very closely related, and glue has been defined as a "gelatin which has been heated longer in water." Both are derived by hydrolysis from collagen, the white fibers of the connective tissues of the animal body, particularly in the skin, bones, and tendons.

Data for gelatin and animal glue shown in Table 6A, are generally in close agreement with the monthly data on production and shipments contained in Facts for Industry Series M19M.1, Gelatin, and series M19M.2, Animal Glue. The data shown in series M19M.1 also include statistics showing that approximately 79 percent of all gelatin was produced from hides and the remainder from ossein. The differences in shipments of photographic and technical grades of gelatin are due to modified procedures used in reporting Census of Manufactures data. The Census of Manufactures data also include values for gelatin capsules and theatrical gelatin not reported in the Facts for Industry survey which is limited to reports by primary producers only. The information for hide glue appearing in Facts for Industry Series M19M.2 also shows quantities by grade, based upon gram strength.

2895--Carbon Black (Full Standard Industrial Classification Title: Bone Black, Carbon Black, and Lamp Black)

This industry comprises establishments primarily engaged in manufacturing bone black, carbon black (channel and furnace black), and lamp black. Establishments primarily engaged in manufacturing activated carbons are classified in Industry 2819, Industrial Inorganic Chemicals, N.E.C.; and charcoals in Industries 2861 and 2862, Softwood and Hardwood Distillation. For a detailed list of primary products of Industry 2895, refer to Table 6A, product codes 2895111 to 2895251.

The value of shipments of Industry 2895, Carbon Black, in 1954 totaled \$102 million. As in 1947 this consisted almost entirely of shipments of carbon, lamp and bone blacks.

Industry 2895 shipments of blacks in 1954 represented 100 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was also 100 percent.

Industry 2895 shipments of primary products (carbon blacks and other blacks) in 1954 represented 98 percent of these products, valued at \$103 million, shipped by all industries. The comparable coverage ratio in 1947 was 97 percent.

The plants manufacturing each of the several "blacks" specialize since the raw materials consumed and the manufacturing processes vary. Data appearing in Table 7, Materials Consumed, relate primarily to the raw materials, fuel oil and natural gas, used in the manufacture of carbon black.

#### 2896--Compressed and Liquefied Gases

This industry comprises establishments primarily engaged in manufacturing gases for sale in compressed, liquid, and

solid form, such as acetylene, carbon dioxide (dry ice), helium, nitrous oxide, refrigerant gases (except ammonia), and oxygen. Establishments primarily engaged in manufacturing ammonia, chlorine, and sulfur dioxide are classified in Group 281, Industrial Inorganic Chemicals. Natural gasoline plants engaged in the production of gases in compressed and liquefied form are classified in Mining industries, and petroleum refineries producing these gases in Industry 2911, Petroleum Refining. Establishments primarily engaged in the shipment of purchased gases, whether received in gaseous or liquid form, are excluded from manufacturing and classified in the trade industries.

For a detailed list of primary products of Industry 2896, refer to Table 6A, product codes 2896111 to 2896498.

The value of shipments of Industry 2896, Compressed and Liquefied Gases, in 1954 totaled \$168 million. This included shipments of primary products (compressed and liquefied gases) valued at \$165 million, shipments of secondary products valued at \$2 million, and miscellaneous receipts of \$1 million.

Receipts for merchandising (products bought and resold without further manufacture or processing) valued at \$33 million are excluded from the \$168 million value of shipments of Industry 2896. Data relating to these merchandising receipts are also excluded from the cost of materials and value added by manufacture, but these activities are reflected in other detailed industry statistics, mainly employment and inventory.

Industry 2896 shipments of compressed and liquefied gases in 1954 represented 99 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 100 percent.

Industry 2896 shipments of compressed and liquefied gases in 1954 represented 84 percent of the compressed and liquefied gases, valued at \$195 million, shipped by all industries. The comparable coverage ratio in 1947 was also 84 percent. Other industries mainly Industry 3313, Electrometallurgical Products, and Industry 2812, Alkalies and Chlorine, shipped compressed and liquefied gases in 1954 totaling \$31 million.

Plants producing different gases report wide variations in their ratios of cost of materials to value of output. These variations are due to the different manufacturing processes employed. For example, plants producing elemental gases by liquefaction of air or electrolysis of water have relatively low materials costs but use large amounts of electricity.

On the other hand, plants producing acetylene from calcium carbide have relatively high materials costs. The need for abundant low cost power in producing calcium carbide has resulted in producing a larger proportion of the expanding production of acetylene, particularly for use in chemical synthesis, from natural gas. Although product statistics were compiled for acetylene made from materials other than calcium carbide, these data are not shown separately to prevent disclosing information for individual companies.

Many producers sell their byproduct gases to other companies which convert the gases to a different form, or which maintain costly sales organizations for marketing the gases. To avoid duplication in the products data, care was taken to include in Table 6A, the quantity and value of products reported by primary producers only. Thus the derived unit prices shown for several of the gases are not representative "market" values, since the shipment values of primary producers exclude certain refining and marketing costs.

Monthly data showing the production of argon, carbon dioxide, hydrogen, nitrogen, and oxygen appear in Facts for Industry Series M19A, Inorganic Chemicals. The totals appearing in this report are higher than the annual total shown in the Facts for Industry report since the Census of Manufactures figures include reports for several additional establishments. The helium statistics shown in the footnote to Table 6A relate to the quantities produced and shipped by Government-owned and operated plants; figures for such establishments being excluded from the scope of the Census of Manufactures. The figures for "Other hydrocarbon gases" exclude statistics for such gases as

propane, butane and propylene; data for which are included in the product statistics for Industry 2911, Petroleum Refining. Product statistics for organic gases, such as halogenated hydrocarbons and cyclopropane are included in the product statistics for Industry 2829, Miscellaneous Organic Chemicals.

#### 2897—Insecticides and Fungicides

This industry comprises establishments primarily engaged in manufacturing inorganic insecticides such as copper, calcium, and lead arsenates, lime-sulfur, sulfur-dust, Paris green, and calcium and sodium arsenite; organic insecticides such as rotenone, pyrethrum, and nicotine-bearing insecticides; and miscellaneous insecticides such as organic thiocyanates, DDT, xanthone, and similar products; and fungicides such as copper, sulfur, and mercury-containing fungicides. Other products included in this industry are intermediate natural products used in making agricultural preparations, such as ground rotenone or pyrethrum extract. Establishments primarily engaged in manufacturing household insecticides (including rodenticides, plant fumigants, weed killers, soil conditioners and fumigants, and animal dips) are classified in Industry 2899, Chemical Products, N.E.C., while plants primarily engaged in producing synthetic organic chemicals and inorganic compounds such as white arsenic or copper sulfate used for agricultural poisons are classified in Industry 2829, Industrial Organic Chemicals, N.E.C., and Industry 2819, Industrial Inorganic Chemicals, N.E.C., respectively.

As indicated above, Industry 2897 now includes plants primarily engaged in producing lead and calcium arsenate. In 1947, such plants were included in Industry 2819, Industrial Inorganic Chemicals, N.E.C. The 1947 Census data have not been retabulated for these changes since the industry data are not significantly affected. For a detailed list of primary products of Industry 2897, refer to Table 6A, product codes 2897011 to 2897085.

The value of shipments of Industry 2897, Insecticides and Fungicides, in 1954 totaled \$174 million. This included shipments of primary products (insecticides and fungicides), valued at \$145 million, shipments of secondary products valued at \$27 million, and miscellaneous receipts of \$2 million.

Receipts for merchandising (products bought and resold without further manufacture or processing) valued at \$46 million are excluded from the \$174 million value of shipments of Industry 2897. Data relating to these merchandising receipts are also excluded from the cost of materials and value added by manufacture, but these activities are reflected in other detailed industry statistics, mainly employment and inventory.

Industry 2897 shipments of insecticides and fungicides in 1954 represented 84 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 87 percent. Secondary products shipped by this industry in 1954 consisted mainly of household insecticides and repellents and weed killers, \$6 million, and industrial organic chemicals, \$11 million.

Industry 2897 shipments of insecticides and fungicides in 1954 represented 82 percent of the insecticides and fungicides, valued at \$178 million, shipped by all industries. This coverage ratio was 68 percent in 1947. Other industries shipping insecticides and fungicides in 1954 consisted mainly of Industry 2819, Industrial Inorganic Chemicals, N.E.C., \$6 million; Chemical Products, N.E.C., \$8 million; and a number of other chemical industries, \$18 million.

As indicated above, the primary products of this industry are preparations, more commonly known as formulations. While such products are produced generally by plants primarily engaged in "mixing" operations only, a number of plants not only formulate but also engage in the manufacture of the basic inorganic and organic agricultural poisons. This situation partially accounts for the "product mix" and relatively low coverage ratio for this industry. In addition, a number of establishments classified in the Trade industries also do some formulations. No measure of the manufacturing activities performed by such trade establishments was secured in the 1954 Censuses.

Table 7, Materials Consumed, by kind, shows only crude sulfur data. Data for organic materials included in insecticidal and fungicidal mixtures appear in the U. S. Tariff Commission publication, Synthetic Organic Chemicals. Monthly data for lead and calcium arsenate appear in the Census Bureau's Facts for Industry Series M19A, Inorganic Chemicals.

#### 2898--Salt

This industry comprises establishments primarily engaged in manufacturing edible salt from rock salt and from natural or artificial brines. Establishments engaged in salt mining are excluded from Manufacturing and classified in Mining industries.

The value of shipments of Industry 2898, Salt, in 1954 totaled \$72 million. This included shipments of primary products (salt) valued at \$69 million, shipments of secondary products valued at \$3 million, and a negligible amount for miscellaneous receipts.

Industry 2898 shipments of salt in 1954 and 1947 represented 96 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 100 percent.

Industry shipments of salt in 1954 represented 97 percent of the salt, valued at \$72 million, shipped by all industries. The comparable coverage ratio in 1947 was 98 percent.

The data shown in the publication exclude information relating to the salt content of brine produced and used in the same plant in the manufacture of chemicals. However, the figures include a small amount of salt transferred from one plant to a second for further purification.

Additional data relating to the production of rock salt appear in reports of the 1954 Census of Mineral Industries. The U. S. Department of Interior, Bureau of Mines, also publishes data showing quantities of salt shipped (by States of destination) and quantities consumed (by class and use).

**2899--Chemical Products, N.E.C.** (Full Standard Industrial Classification Title: Chemicals and Chemical Products, Not Elsewhere Classified)

This industry comprises establishments primarily engaged in manufacturing miscellaneous chemical products, not elsewhere classified, such as bluing, laundry soaps, mucilage, writing and stamp pad inks, and dextrine sizes; agricultural, industrial, and household disinfectants and deodorants; household insecticides and repellents such as fly sprays, rat, ant, and roach poisons and moth repellents; and industrial compounds, such as boiler and insulating compounds, metal, oil, and water-

treating compounds, water-proofing compounds, and chemical supplies for foundries. Such specialties containing animal, vegetable or mineral oil bases, hydraulic brake fluids; dielectric oils; rust preventatives; or cutting, grinding, or drawing compounds or paste are classified in Major Group 29, Products of Petroleum and Coal.

The S.I.C. definition for Industry 2899 has been amended by the Bureau of the Budget by the transfer of mucilage, household adhesives, and cements from Industry 2899, to 2894. In addition, blenders of chemical specialties containing animal and vegetable oils, formerly included in this industry, are now classified in Industry 2992, Lubricants, N.E.C. The 1947 Census data shown in the tables below have been retabulated on the basis of the revised industry content for comparability with the 1954 data. For a detailed list of primary products of Industry 2899, refer to Table 6A, product codes 2889111 to 2899387.

The value of shipments of Industry 2899, Chemical Products, N.E.C., in 1954 totaled about \$532 million. This included shipments of primary products (chemical products, n.e.c.) valued at \$419 million, shipments of secondary products valued at \$100 million, and miscellaneous receipts of \$13 million.

Receipts for merchandising (products bought and resold without further manufacture or processing) valued at \$45 million are excluded from the \$532 million value of shipments of Industry 2899. Data relating to these merchandising receipts are also excluded from the cost of materials and value added by manufacture, but these activities are reflected in other detailed industry statistics, mainly employment and inventory.

Industry 2899 shipments of primary products in 1954 represented 81 percent of its total product shipments (primary and secondary). In 1947, this primary product specialization ratio was 75 percent. Secondary products shipped by this industry in 1954 consisted mainly of cleaning and polishing preparations, \$20 million; insecticides and fungicides, \$8 million; industrial inorganic chemicals, n.e.c., \$3 million; and industrial organic chemicals, \$8 million.

Industry 2899 shipments of primary products (chemical products, n.e.c.) in 1954 represented 70 percent of these products, valued at \$597 million, shipped by all industries. The comparable coverage ratio in 1947 was 64 percent. Other industries shipping chemical products, n.e.c., in 1954 consisted mainly of Industry 2819, Inorganic Chemicals, N.E.C., \$20 million; Industry 2829, Industrial Inorganic Chemicals, N.E.C., \$6 million; and Industry 2842, Cleaning and Polishing Preparations, \$26 million.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products, and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (Tables 1-4) with product statistics (Table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in Table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry made as secondary products by establishments classified in other industries.

## MISCELLANEOUS CHEMICAL PRODUCTS

\* Revised

NA Not available.

<sup>1</sup>For the period 1949-1954, figures are based on employment for the payroll periods ended nearest the 15th of March, May, August and November. For 1947, they represent the average of 12 monthly figures. For earlier years, the production worker average was calculated as in 1947, but the figure for all employees represents the sum of the annual average number of production workers and the number of nonproduction workers reported for one payroll period (usually in October).

<sup>2</sup>Value of products less cost of materials, supplies, fuel, electric energy and contract work. See Introduction, "Value Added by Manufacture." For "Glue and gelatin" and "Carbon black" industries, 1947 value added by manufacture does not equal the published value of shipments less cost of materials, etc. because an estimated value of production was used in the calculation in place of value of shipments. Since the 1949-1952 estimates were derived from 1947 base totals, the same inequality may exist for these years.

<sup>3</sup>Figures for years prior to 1935 do not include cost of contract work.

<sup>4</sup>For 1929, and 1927-1954, the figures represent value of shipments, except in the case of "Glue and gelatin" and "Carbon black" for 1929 where they represent value of production; for all other years, the figures represent value of production. See Introduction, "Value of Shipments."

<sup>5</sup>The figures for 1949-1953 represent estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. Estimates with a standard error in excess of 15 percent generally have been omitted from this table.

<sup>6</sup>The figures for 1939 are not entirely comparable with those for earlier years. For "Printing ink," value added by manufacture for 1939 on a basis comparable with earlier years was \$24.0 million. No comparable data prior to 1939 are available for "Insecticides and fungicides."

<sup>7</sup>An extensive revision was made in 1933 in the schedule used for "Toilet preparations." The figures for 1931, but not for earlier years, were revised to make them comparable with those for 1933. Value added by manufacture for 1931 on a basis comparable with earlier years was \$111.6 million.

<sup>8</sup>Revised 1947 Census industry data comparable with 1954 are shown in this table. No comparable data are available for earlier years.

<sup>9</sup>"Compressed and liquefied gases" was not shown as a separate industry prior to 1927, but was included with "Chemicals, n.e.c."

<sup>10</sup>The figures for "Salt" prior to 1937 are not sufficiently comparable with those for later years to be shown in this table because they include data for establishments mining rock salt without further refining.

MISCELLANEOUS CHEMICAL PRODUCTS

Note: Detailed figures may not add to the totals because of independent rounding.

<sup>1</sup> Withheld to avoid disclosing figures for individual companies.

General statistics for some producing States are not shown separately in the table (see INTRODUCTION "Confidentiality of Data for Individual Companies"). Such States are shown below with the number of establishments in each State for 1954 and, in parentheses, the number of employees or the employment-size range for that State for 1954:

S.I.C. 2891, Printing Ink: New England—Massachusetts, 13 (20-99); Connecticut, 2 (1-19); East North Central—Indiana, 3 (20-99); Wisconsin, 4 (20-99); West North Central—Minnesota, 4 (20-99); Iowa, 1 (1-19); South Atlantic—Maryland, 3 (20-99); District of Columbia, 1 (20-99); Virginia, 3 (20-99); North Carolina, 2 (1-19); Georgia, 4 (20-99); Florida, 5 (20-99); East South Central—Kentucky, 1 (1-19); Tennessee, 3 (20-99); Alabama, 1 (1-19); West South Central—Louisiana, 6 (20-99); Texas, 8 (20-99); West—Colorado, 2 (20-99); Utah, 1 (1-19); Washington, 2 (20-99); Oregon, 2 (20-99).

S.I.C. 2892, Essential Oils: All Other States—New York, 17 (100-249); Michigan, 1 (20-99); North Carolina, 1 (1-19); Georgia, 1 (1-19); Florida, 7 (20-99); Kentucky, 2 (20-99); Washington, 1 (20-99); California, 1 (1-19).

S.I.C. 2893, Toilet Preparations: New England—Maine, 1 (1-19); New Hampshire, 2 (1-19); Massachusetts, 12 (250-499); Rhode Island, 1 (1-19); East North Central—Ohio, 20 (1-459); Indiana, 16 (100-249); Wisconsin, 12 (250-499); West North Central—Iowa, 6 (20-99); South Dakota, 1 (1-19); Nebraska, 2 (1-19); Kansas, 1 (1-19); South Atlantic—Maryland, 4 (250-499); District of Columbia, 1 (1-19); Virginia, 4 (100-249); North Carolina, 6 (20-99); South Carolina, 1 (1-19); Georgia, 8 (20-99); Florida, 9 (20-99); East South Central—Kentucky, 5 (1-19); Alabama, 4 (1-19); Mississippi, 1 (1-19); West South Central—Louisiana, 5 (20-99); Oklahoma, 3 (1-19); Mountain—Colorado, 2 (20-99); Arizona, 1 (1-19); Utah, 4 (1-19); Pacific—Washington, 4 (1-19); Oregon, 3 (1-19).

S.I.C. 2894, Glue and Gelatin: New England—Vermont, 1 (1-19); Connecticut, 4 (1-19); East North Central—Indiana, 3 (20-99); Michigan, 5 (100-249); Wisconsin, 6 (250-499); West North Central—Minnesota, 3 (20-99); Iowa, 2 (1-19); Nebraska, 1 (20-99); South—Delaware, 1 (1-19); Maryland, 3 (20-99); Virginia, 3 (1-19); North Carolina, 1 (1-19); Georgia, 3 (20-99); Alabama, 1 (1-19); Mississippi, 1 (1-19); Louisiana, 1 (1-19); Texas, 9 (20-99); Pacific—Washington, 2 (20-99); Oregon, 3 (20-99); California, 18 (250-499).

S.I.C. 2895, Carbon Black: All Other States—Pennsylvania, 2 (20-99); Kansas, 2 (100-249); Arkansas, 1 (20-99); Oklahoma, 2 (20-99); New Mexico, 4 (100-249); California, 1 (1-19).

S.I.C. 2896, Compressed and Liquefied Gases: New England—Maine 2 (1-19); Rhode Island, 1 (1-19); Connecticut, 1 (1-19); East North Central—Wisconsin, 7 (20-99); West North Central—Minnesota, 6 (20-99); Iowa, 5 (20-99); North Dakota, 1 (1-19); South Dakota, 2 (1-19); Nebraska, 3 (20-99); South Atlantic—Delaware, 1 (1-19); Virginia, 4 (20-99); West Virginia, 6 (20-99); East South Central—Kentucky, 3 (500-999); Alabama, 9 (100-249); Mississippi, 2 (1-19); West South Central—Arkansas, 3 (1-19); Mountain—Montana, 3 (20-99); Idaho, 1 (1-19); Wyoming, 2 (1-19); Colorado, 11 (100-249); New Mexico, 6 (20-99); Arizona, 2 (20-99); Utah, 5 (20-99); Nevada, 1 (1-19).

S.I.C. 2897, Insecticides and Fungicides: New England—Maine, 3 (20-99); Vermont, 1 (1-19); Massachusetts, 6 (20-99); Connecticut, 3 (1-19); Middle Atlantic—New York, 12 (250-499); Pennsylvania, 4 (100-249); North Central—Ohio, 4 (20-99); Indiana, 1 (1-19); Illinois, 7 (20-99); Michigan, 7 (20-99); Wisconsin, 5 (20-99); Iowa, 3 (20-99); North Dakota, 2 (1-19); Nebraska, 4 (20-99); Kansas, 3 (20-99); South Atlantic—West Virginia, 4 (20-99); South Carolina, 5 (20-99); East South Central—Kentucky, 5 (100-249); Tennessee, 3 (20-99); West South Central—Arkansas, 3 (20-99); Oklahoma, 2 (20-99); Mountain—Colorado, 7 (500-999); Arizona, 7 (100-249); Pacific—Washington, 5 (20-99); Oregon, 3 (20-99).

S.I.C. 2898, Salt: East North Central—Ohio, 4 (500-999); Michigan, 4 (1-114); South—West Virginia, 1 (20-99); Louisiana, 1 (20-99); Oklahoma, 2 (1-19); Texas, 3 (250-499); West—Utah, 4 (100-249); Washington, 1 (1-19).

S.I.C. 2899, Chemical Products, N.E.C.: New England—Maine, 3 (20-99); New Hampshire, 1 (1-19); Rhode Island, 7 (20-99); West North Central—Iowa, 14 (20-99); South Dakota, 1 (1-19); Nebraska, 3 (1-19); Kansas, 4 (20-99); South Atlantic—Delaware, 1 (1-19); District of Columbia, 2 (1-19); Virginia, 3 (20-99); West Virginia, 2 (1-19); East South Central—Kentucky, 7 (20-99); Alabama, 8 (20-99); Mississippi, 6 (20-99); West South Central—Arkansas, 2 (1-19); Louisiana, 12 (100-249); Oklahoma, 13 (20-99); Mountain—Colorado, 10 (20-99); New Mexico, 2 (1-19); Arizona, 2 (20-99); Utah, 1 (1-19); Pacific—Washington, 6 (1-19).

Horsepower rating of power equipment at end of 1954:							
Horsepower of prime movers and electric motors driven by purchased energy, total.....1,000 hp..	57	371	80	26	140	92	41
Engines, etc., driving electric generators.....do....	7	63	30	(7)	32	3	2
Engines, etc., not driving electric generators.....do....	4	89	4	1	91	5	2
Electric motors driven by purchased energy.....do....	46	219	46	25	17	84	37
Electric motors driven by energy generated at the establishment.....do....	6	48	15	(7)	33	(7)	(7)

Note: Detailed figures may not add to the totals because of independent rounding. xxx Not applicable. <sup>1</sup>The specialization ratio compares the given industry's shipments of its primary products to its primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A.) Columns containing totals for establishments with 90% or more primary product specialization are shown only for those industries having a primary product specialization of less than 90%. <sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry. <sup>3</sup>Less than \$500 thousand. <sup>4</sup>Less than 500 tons. <sup>5</sup>Less than \$5 thousand. <sup>6</sup>Less than 500 thousand kwh. <sup>7</sup>Less than 500 hp. NA Not available.

<sup>1</sup>The specialization ratio compares the given industry's shipments of the primary products to its total shipments of all products. (The primary products are listed in Tables 5B and 6A; the first 4-digits of the product code represent the industry code to which the product is primary, except for Industry 2893 (See text).)

<sup>2</sup>The coverage ratio measures the extent to which the total shipments of products primary to the given industry are shipped by establishments classified in that industry.

<sup>3</sup>Excludes \$26,841 thousand for product class 28413, Specialty Soaps, which is primary to Industry 2893 as well as to Industry 2841.

## MISCELLANEOUS CHEMICAL PRODUCTS

28H-15

Table 5B.--INDUSTRY-PRODUCT ANALYSIS--SHIPMENTS BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954

(In thousands of dollars. The first column shows the total value of shipments of the specified industry divided among: (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products) and (c) miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other Industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed. The last column shows the total value of shipments of the primary products of the industry by all manufacturing industries)

## MANUFACTURES—INDUSTRY STATISTICS

Table 5B.—INDUSTRY-PRODUCT ANALYSIS—SHIPMENTS BY PRODUCT CLASS AND INDUSTRY, FOR THE UNITED STATES: 1954—Continued

Prod. class code	Compressed and liquefied gases industry	Compressed and liquefied gases (S.I.C. 2896)	Other industries	All industries			
	Total shipments and receipts of the industry.....	167,674	xxx	xxx			
	Primary products.....	164,773	30,617	195,390			
28961	Elemental gases.....	74,270	5,446	79,716			
28962	Acetylene.....	52,208	12,342	64,550			
28963	Carbon dioxide.....	35,632	7,813	43,445			
28964	Other compressed and liquefied gases.....	2,633	5,016	7,649			
28960	Gases, not specified by kind.....	30	...	30			
	Secondary products.....	2,106	xxx	xxx			
	Miscellaneous receipts.....	795	xxx	xxx			
Prod. class code	Insecticides and fungicides industry	Insecticides and fungicides (S.I.C. 2897)	Inorganic chemicals, n.e.c. (S.I.C. 2819)	Chemical products, n.e.c. (S.I.C. 2899)	Other industries	All industries	
	Total shipments and receipts of the industry.....	174,613	xxx	xxx	xxx	xxx	
28971	Insecticides and fungicides for agricultural use.....	145,214	6,263	8,123	18,356	177,956	
	Secondary products.....	27,039	xxx	xxx	xxx	xxx	
28293	Miscellaneous acyclic chemicals.....	10,644	xxx	xxx	xxx	xxx	
28711	Mixed fertilizers, complete and incomplete.....	2,416	xxx	xxx	xxx	xxx	
28991	Household insecticides and repellants.....	3,302	xxx	xxx	xxx	xxx	
28992	Weed killers (herbicidal preparations).....	3,010	xxx	xxx	xxx	xxx	
	Other secondary products.....	7,667	xxx	xxx	xxx	xxx	
	Miscellaneous receipts.....	2,360	xxx	xxx	xxx	xxx	
	Contract and commission work.....	1,547	xxx	xxx	xxx	xxx	
	Other receipts.....	813	xxx	xxx	xxx	xxx	
Prod. class code	Salt industry	Salt (S.I.C. 2898)	Other industries	All industries			
	Total shipments and receipts of the industry.....	71,933	xxx	xxx			
28980	Salt.....	69,400	2,236	71,636			
	Secondary products <sup>5</sup> .....	2,522	xxx	xxx			
	Miscellaneous receipts.....	11	xxx	xxx			
Prod. class code	Chemical products industry	Chemical products, n.e.c. (S.I.C. 2899)	Inorganic chemicals, n.e.c. (S.I.C. 2819)	Organic chemicals, n.e.c. (S.I.C. 2829)	Cleaning and polishing products (S.I.C. 2842)	Other industries	All industries
	Total shipments and receipts of the industry.....	531,213	xxx	xxx	xxx	xxx	xxx
	Primary products.....	418,976	20,453	5,855	25,536	125,952	596,772
28991	Household insecticides and repellants.....	42,403	(D)	(D)	6,308	10,626	60,635
28992	Weed killers (herbicidal preparations).....	15,467	(D)	(D)	260	15,162	36,344
28993	Chemical specialties.....	352,517	14,249	5,306	18,968	699,531	490,571
28990	Chemical products, not specified by kind.....	8,589	...	...	xxx	633	9,222
	Secondary products.....	99,615	xxx	xxx	xxx	xxx	xxx
2819-	Inorganic chemicals, n.e.c.....	3,441	xxx	xxx	xxx	xxx	xxx
2829-	Organic chemicals, n.e.c.....	5,037	xxx	xxx	xxx	xxx	xxx
28346	Other pharmaceutical preparations for human use.....	3,080	xxx	xxx	xxx	xxx	xxx
28412	Soaps, except specialty, bulk.....	2,891	xxx	xxx	xxx	xxx	xxx
28423	Specialty detergents.....	4,322	xxx	xxx	xxx	xxx	xxx
28424	Polishing preparations and related products.....	10,349	xxx	xxx	xxx	xxx	xxx
28425	Alkaline detergents.....	2,546	xxx	xxx	xxx	xxx	xxx
28543	Other inorganic pigments, including white extender.....	4,532	xxx	xxx	xxx	xxx	xxx
28941	Glues and adhesives.....	2,428	xxx	xxx	xxx	xxx	xxx
28970	Insecticides and fungicides for agricultural use.....	8,123	xxx	xxx	xxx	xxx	xxx
29921	Lubricating oils.....	6,547	xxx	xxx	xxx	xxx	xxx
	Other secondary products.....	46,319	xxx	xxx	xxx	xxx	xxx
	Miscellaneous receipts.....	12,622	xxx	xxx	xxx	xxx	xxx
	Contract and commission work.....	4,917	xxx	xxx	xxx	xxx	xxx
	Other receipts.....	7,705	xxx	xxx	xxx	xxx	xxx

xxx Not applicable.

D Withheld to avoid disclosing of figures for individual companies.

<sup>1</sup>Includes \$6,352 thousand shipped by establishments classified in Industry 2829, Organic Chemicals, N.E.C.<sup>2</sup>Includes \$6,403 thousand shipped by establishments classified in Industry 2842, Cleaning and Polishing Products.<sup>3</sup>Of this figure, 58 percent consisted of the following product classes: 28119, Other finished petroleum products (petrolatum, naphtha solvents, etc.) 39640, Needles, pins, fasteners, and similar notions.<sup>4</sup>Includes \$6,509 thousand shipped by establishments classified in Industry 2823, Plastics Materials.<sup>5</sup>Includes data for rock salt, produced by establishments which mine as well as produce salt from artificial brine. The amount for which may not be shown separately without disclosing figures for individual companies.<sup>6</sup>Includes \$6,041 thousand shipped by establishments classified in Industry 2822, Intermediates and Organic Colors; \$7,656 thousand shipped by establishments classified in Industry 2851, Paints and Varnishes; Softwood distillation; \$5,384 thousand shipped by establishments classified in Industry 2992, Lubricants, N.E.C. and \$9,681 thousand shipped by establishments classified in Industry 3951, Pens and Mechanical Pencils.

## MISCELLANEOUS CHEMICAL PRODUCTS

xxx Not applicable.

NA Not available.

<sup>1</sup>Value of interplant transfers amounts to less than 5 percent of total and in no case exceeds 15 percent for any one product.<sup>2</sup>Codes 2893100, 2893300, and 2893400 combined with code 2893000.<sup>3</sup>Codes 2893235 and 2893237 combined with code 2893239, "Commercial".<sup>4</sup>For additional data for shaving preparations, soap or soap base, see product class code 28413, below.<sup>5</sup>Codes 2894131, 2894145, 2894165, 2894175, 2894179, and 2894189 combined with code 2894198, "Other glues and adhesives."<sup>6</sup>See Industry 2823, "Plastics Materials" for additional data on synthetic resins for adhesives.<sup>7</sup>Codes 2894100 and 2894200 combined with 2894000.<sup>8</sup>Includes information principally for unfilled capsules and gelatin sheets for theatrical use.<sup>9</sup>For 1954, the United States Bureau of Mines reported that 1,409,547,000 pounds of carbon black were produced; 378,741,000 by the contact process, and 1,030,806,000 by the furnace process. The corresponding 1947 figures are 653,966,000 pounds by contact process and 664,999,000 pounds by the furnace process.<sup>10</sup>Code 2895251 combined with code 2895200, "Carbon blacks, not specified by kind."<sup>11</sup>Codes 2897037, 2897039, and 2897041 combined with code 2897081, "Other insecticidal preparations for agricultural use."<sup>12</sup>Codes 2897071, 2897073, and 2897075 combined with code 2897081, "Other insecticidal preparations for agricultural use."<sup>13</sup>Excludes unspecified amounts classified as code 2829311, "Acyclic chemicals."<sup>14</sup>Code 2899341 combined with code 2899385, "Other industrial chemical specialties."<sup>15</sup>The 1954 data exclude core oils, classified as primary to Industry 2992, Lubricants, greases.<sup>16</sup>Because some respondents reported these products as proprietary liquid antiseptics (product code 2834629) in 1954 and as mouthwashes in 1947, comparable data may be obtained by adding \$18,756 thousand for antiseptics to the 1954 figure and \$6,058 thousand to the 1947 figure for mouthwashes.<sup>17</sup>Excludes value for helium produced in Government-owned plants. In 1954, these plants produced 190,740 thousand cubic feet and shipped 189,873 thousand cubic feet valued at over \$3 million. In 1947, the amount of helium produced by these plants totaled 70,298 thousand cubic feet and shipped 52,322 thousand cubic feet. The value of the 1947 shipments is not stated by the Bureau of Mines (see Mineral Year Book).<sup>18</sup>Excludes 157 thousand short tons of evaporated salt, valued at \$4,812 thousand, shipped by establishments classified in the Mineral Industries.

## MISCELLANEOUS CHEMICAL PRODUCTS

28H-23

Table 6B.—VALUE OF PRODUCT CLASSES SHIPPED BY ALL MANUFACTURING ESTABLISHMENTS, BY DIVISIONS AND STATES FOR 1954, AND UNITED STATES TOTALS FOR EARLIER YEARS

(In thousands of dollars. Statistics are shown for selected product classes which are economically significant and production of which is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (Table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are listed only if the value of shipments is more than \$1 million and the figure does not disclose individual company information. Additional States which had shipments of more than \$1 million of the individual product classes are listed in footnote 1.)

Note: The figures shown for 1950 to 1953 are sample estimates obtained from the Annual Survey of Manufactures for those years. Since the estimates are based on a sample they are subject to sampling variability, that is, they are not the same as figures which would have been obtained if complete censuses had been taken for those years. Measures of the sampling variability (standard errors) of the estimated total value of shipments of each product class are shown in the Annual Survey of Manufactures publications. Also shown are the standard errors of the relative change in shipments between some consecutive Annual Survey years which are the more significant measures when the series is studied for trend.

<sup>1</sup>For the specified product classes, shipments of over \$1 million were reported for the States listed but the exact figures are withheld to avoid disclosure of individual company figures: 28931, Illinois, and California; 28932, Massachusetts, Connecticut, Kansas, Maryland, California, Ohio, Indiana, Illinois, and Minnesota; 28933, Ohio, Indiana, Illinois, Minnesota, Missouri, Kansas, and California; 28934, Massachusetts, Kansas, Virginia, and Tennessee; 28941, North Carolina, Texas, Indiana, and Wisconsin; 28961, Massachusetts, Michigan, Kentucky, Tennessee, Alabama, and Indiana; 28970, Iowa, Kansas, Arkansas, Colorado, Arizona, Kentucky, and Tennessee; 28991, Pennsylvania, Massachusetts, Connecticut, Louisiana, and Minnesota.

Table 7.--MATERIALS CONSUMED, BY KIND: 1954

Code	Description of materials	Unit of measure	Quantity	Delivered cost (\$1,000)
	INDUSTRY 2895--CARBON BLACK <sup>1</sup>			
	Materials, containers, and supplies, total.....		xxx	36,788
291131	Fuel oil, used as a raw material.....	42 gallon barrels.....	2 <sup>3</sup> ,782,924	10,549

	For industries listed below, only the following materials were reported:			
	INDUSTRY 2893--TOILET PREPARATIONS			
282933	Alcohol, ethyl, denatured.....		xxx	2,948
	INDUSTRY 2897--INSECTICIDES AND FUNGICIDES			
147711	Sulfur, crude.....	Long ton.....	145,018	4,697

xxx Not applicable.

<sup>1</sup>Includes materials consumed in the production of carbon black, lamp black, and bone black.

<sup>2</sup>The Bureau of Mines reports that 154,919 thousand gallons of liquid hydrocarbons valued at \$10,320 thousand and 251,176 million cubic feet of natural gas, valued at \$17,510 thousand were used in manufacturing carbon black by the channel and furnace processes. The 1947 figures also reported by that agency are 480,646 million cubic feet of natural gas valued at \$22,723 thousand. Data for liquid hydrocarbons used in the production of carbon black are not shown separately.

Table 8.—GENERAL STATISTICS FOR MANUFACTURING ESTABLISHMENTS, CLASSIFIED BY INDUSTRY SPECIALIZATION AND PRIMARY PRODUCT CLASS SPECIALIZATION, FOR THE UNITED STATES: 1954

(This table presents selected statistics for establishments classified according to their degree of specialization in products primary to the industry. The establishments are classified in two ways: (1) by industry specialization—the degree of specialization in all primary products of the industry; and (2) by product-class specialization—the degree of specialization in the largest product class of the establishment. The degree of "industry specialization" for an establishment represents the ratio of its primary product shipments to its total product shipments, primary and secondary. The degree of "product-class specialization" for an establishment represents the ratio of its largest product class shipments to its total product shipments, primary and secondary. Data are not shown for some industries, product classes, and specialization ranges for a variety of reasons, consequently, detailed figures frequently do not add to the totals. See Introduction for detailed explanation)

Ind. or product class No.	Industry or product class by percent of specialization	Establishments, number	All employees		Production workers			Value added by manufacture (\$1,000)	Cost of materials, etc. (\$1,000)	Value of shipments (\$1,000)

<sup>1</sup>This class includes data for establishments with less than 50 percent specialization in the primary products of the industry and establishments engaged exclusively in contract work defined in the industry. Miscellaneous small statistical adjustments are also included.

# **SPECIAL REPORT**

## **MANUFACTURING ACTIVITY IN GOVERNMENT ESTABLISHMENTS**

SR - 1

## Manufacturing Activity in Government Establishments

This special report presents data for manufacturing activities of selected government establishments in continental United States. These data are not included in other 1954 Census of Manufactures reports, which cover privately operated establishments only. Manufacturing establishments owned by the Federal government and operated by private companies either for the government or for their own account are included with privately operated establishments. Three types of establishments are covered in this report: (1) manufacturing facilities owned and operated by the Department of Defense; (2) manufacturing facilities owned and operated by other United States Government agencies, and (3) prison industries (Federal, District of Columbia and State). The data were prepared with the cooperation of the Department of Defense, the Department of Justice, the Department of Interior and the District of Columbia and State prison systems.

### Manufacturing Facilities Owned by the United States Government and Operated by the Department of Defense

Data are shown in Tables 1 to 3 for manufacturing facilities owned by the United States Government and operated by the Department of Defense. Although these establishments may also be engaged in nonmanufacturing activities at the same location, the statistics represent only their activities relating to manufacturing.

This report covers all manufacturing installations operated by the Department of Defense which produce goods or perform manufacturing services for the general supply system of the Department of Defense. It does not include activities of Defense Department installations which serve primarily or exclusively their own installations (e.g., bakeries, some machine shops and box plants).

Statistics are shown in these tables for employment, man-hours, payrolls, value added by manufacture, and value of shipments. Value of shipments reflects all of the direct costs incurred by the establishments in manufacturing operations such as labor, raw materials, components, parts, supplies, overhead, etc. For shipyards, value of shipments represents the value of new construction and repair work performed during the year whether or not the vessels were completed by the end of 1954. Generally, individual product statistics are shown only for those items with a civilian counterpart. Furthermore, product detail on ordnance and related items is withheld for security reasons on advice of the Bureau of the Budget.

Value added by manufacture represents the total value of shipments (including the value of manufacturing services) less the cost of materials, parts, supplies, etc., actually consumed or

put into production during the year, whether purchased during 1954, withdrawn from inventories, or received from other Government agencies. For a few establishments, value added by manufacture was partly estimated by the Bureau of the Census after consultation with the Department of Defense, on the basis of related data reported by the establishment.

Military personnel are not included in any of the employment, payroll or man-hours data. These data represent only nonmilitary (wage board and graded) employees engaged in the manufacturing activities at the plant.

### Manufacturing Facilities Owned and Operated by Other United States Government Agencies

Manufacturing operations of the Bureau of Mines, U. S. Department of Interior, are not included in Tables 1 to 3. That Agency is the sole producer of helium in the United States. During 1954, it operated 4 plants from which 190 million cubic feet of helium valued at \$3,202 thousand were shipped. The value added by manufacture for these plants was \$2,838 thousand. The average number of employees totaled 358, of which 275 were production and related workers, and the total wages and salaries paid amounted to \$1,583 thousand. The Bureau of Mines also operated a titanium pilot plant during part of 1954 which produced 290 thousand pounds of titanium sponge and employed 64 persons. Additional detail for production, shipments, consumption, prices, reserves and activities relating to conservation and technology appear in the Minerals Yearbook, a publication of the Bureau of Mines.

Excluded from this report are the manufacturing activities of the Government Printing Office and the Tennessee Valley Authority. The operations of these agencies are covered in their Annual Reports. Also excluded are the minor manufacturing activities of such other Government agencies as the Post Office Department and the General Services Administration. The manufacturing activities of these latter agencies have no counterparts in private industry.

### Prison Industries (Federal, District of Columbia, and State)

During 1954 manufactured products valued at \$69,184 thousand were produced in Federal, District of Columbia, and State prisons in the United States. It is estimated that about 10 percent of this total was sold on the open market, the remainder representing products used by Federal or local government agencies, including the prison systems. These data, shown in detail in Table 4, cover the activities of the Federal Prison Industries, Inc., as well as those of the prison industries of each State and the District of Columbia.

# Appendix A

## Industry Descriptions

Appendix A, which is included in Volume I, Summary Statistics, and Volume III, Area Statistics, has been omitted from this volume. The information contained in the appendix includes the industry description and the coverage and specialization ratio for each industry. Similar but more extensive information of this type is contained elsewhere in this volume: the industry description in the text preceding the tables for each industry, and the ratios in Table 5A for each industry.

## Appendix B

# COMPARISON OF 1954 AND 1947 CENSUS OF MANUFACTURES INDUSTRY CLASSIFICATIONS

This appendix describes the principal changes in scope and content of 1947 and 1954 manufacturing industries as well as revisions of the 1945 edition of the Standard Industrial Classification approved by Bureau of the Budget prior to the 1954 Census. The 1954 Census is based on the November 1945 edition of the Standard Industrial Classification as amended by the Bureau of the Budget prior to that Census. For the 1954 Census, the manufacturing division comprises 20 major industry groups (two-digit groups ranging from codes 20 to 39 inclusive; group 19 is combined with group 39); 142 industry groups (three-digit codes); and 446 individual industries (four-digit codes). This represents an increase from the 1947 Census of one 3-digit group (Group 241, Logging Camps and Logging Contractors) and a decrease of seven 4-digit industries. The decrease in the number of industries reflects primarily consolidations of smaller and less significant industries.

As a whole the scope and content of 1954 and 1947 Census industries are in substantial agreement. It should be noted that both in 1954 and 1947 separate central administrative or auxiliary units of multi-establishment companies are not included in the operating manufacturing establishment totals. However, in 1954 unlike 1947, they are included in the "all manufacturing" totals shown in the Summary and State volumes. The principal changes between the industry classifications followed in the 1954 Census and those in the 1947 Census publication or the 1945 edition of the SIC Manual are discussed below:

A. The amended Standard Industrial Classification added the following establishments to the scope of manufacturing:

1. Establishments processing milk (pasteurizing, homogenizing, vitaminizing and bottling) as well as producing other dairy products are included in Group 202, Dairy Products, whether or not the processing establishments are also engaged in the route distribution of milk. In 1947 such plants were included in Trade Industries; however, supplemental data were collected from plants processing milk provided they were also engaged in producing other dairy products. These data were tabulated separately on the basis of the plant's principal manufacturing activity, except for fluid milk and cream, and excluded from manufacturing totals.

2. Establishments primarily engaged in the production of fresh (not frozen) packaged oysters and other seafood, formerly classified in Wholesale Trade, are now included in Industry 2036, Packaged Seafood.

3. Apparel and knitting jobbers and leather converters who assign materials to contract factories for fabrication for their account are included in manufacturing industries. Jobbers assigning materials fabricated on a cut-make-trim basis are classified in Major Group 23, Apparel and Related Products; jobbers supplying yarns to commission knitters in Group 225, Knitting Mills; converters assigning hides and skins for tanning and finishing in Industry 3111, Leather Tanning and Finishing. Since these apparel jobbers and leather converters were included in the scope of the 1947 Census, the revision in the Standard Industrial Classification does not affect the comparability of 1954-1947 Census data.

B. In addition to the expanded scope of manufactures arising from the amendments to the Standard Industrial Classification, the 1954 Census included the following types of establishments

which had been excluded from the 1947 Census due primarily to the difficulties involved in obtaining adequate mailing lists:

1. Logging camps and contractors (in 1954 classified in Industry 2411).

2. Sawmills producing less than 200,000 board feet of lumber (in 1954 classified in Industry 2421).

3. Gum naval stores produced in fire stills, output of which in 1947 was estimated at fifteen percent and by 1954 had declined to less than two percent of the total output of Industry 2863.

C. As a result of clarifications of the scope of manufactures in the 1945 edition of the Standard Industrial Classification, the following activities included in the 1947 Census have been excluded from the 1954 Census. The exclusion of these activities has had little effect on the overall comparability of data.

1. Retail multi-outlet bakeries producing bakery products at each location for direct sale to consumers on the premises were included in 1947 Census Industry 2051 and in Retail Trade in 1954.

2. Wool combing jobbers (establishments having wool combed for them on contract) were included in 1947 Industry 2211 and classified in Trade Industries in 1954.

3. Coke ovens owned and operated by Public Utilities were included in 1947 Industry 2932 and excluded from the scope of the 1954 Census of Manufactures, Business, and Mineral Industries.

D. The amended Standard Industrial Classification established a number of separate industries by dividing existing industries; conversely, it eliminated a number of four-digit industries by combination. Other amendments include the transfer of products from one industry to another. Since many of these amendments were consistent with Census procedures followed in 1947, the 1954-1947 data are generally comparable. Shifts of product classification are described in the text material preceding the applicable industry in the Industry Volume.

Table A below shows industries which have been significantly amended from the 1945 edition of the Industrial Classification and their 1954 Census of Manufactures equivalents—including approved Census rearrangements of the amended Standard Industrial Classification.

Table B below compares industry classifications used in the publication of the 1954 Census of Manufactures with those followed in the 1947 Census. It includes all industries which have been changed significantly in content from 1947; other industry codes and content remain substantially unchanged from 1947. The first column lists the 1954 Census industry code; the second column the equivalent 1947 industry code (an asterisked code means that only part of the 1947 industry is included). The industry titles shown are the 1954 and 1947 Census short industry titles. 1947 Census equivalent whole or parts of 1954 industries are indented below the corresponding 1954 Census titles and the following details are shown where applicable: (1) reference to the specific part of the 1947 Census industry covered and (2) reference to other 1954 industries into which the 1947 industry was distributed. The last four columns contain the 1954 and 1947 Census totals which comprise the retabulated industry data consisting of number of employees and value added by manufacture. Since the 1947 retabulated data includes adjustments to previously published data they may differ from figures shown in the 1947 Census of Manufactures.

<sup>1</sup>Represents 1954 Census combinations and rearrangements rather than amended Standard Industrial Classifications.<sup>2</sup>Industry 2296 has been combined with 2299 in the revised Standard Industrial Classification. For comparability with 1947, the Census also included Industry 2297 in the combination.

<sup>1</sup>The number of employees for 1954 for industries other than 2036, 2037, 2099, 2295, and 2889 of this table are based on employment averages for payroll periods ending nearest the 15th of March, May, August, and November. For industries 2036, 2037, 2099, 2295, and 2889 the number of employees are based on the average on the payroll during pay periods ended nearest the 15th of each of the 12 months. For 1947, the employment figure for all industries represents the average on the payroll during pay periods ended nearest the 15th of each of the 12 months.

<sup>2</sup>Packaged seafood and frozen fruits and vegetables formerly constituted one industry; however, fresh packaged seafood was not included in manufacturing in 1947. 1947 employment and value added for 1954 industries 2036 and 2037 combined (excluding fresh packaged seafood) are 17.4 thousand and \$59,377 thousand, respectively. Total fresh packaged seafood shipped in 1954 amounted to \$53,552 thousand.

<sup>3</sup>Industry 2090 in 1947 was a Census subindustry of 2099.

<sup>4</sup>Fire stills were excluded from the scope of the 1947 Census. In 1947 fire stills accounted for 15 percent of the total value of products; by 1954 practically all of the production was accounted for by steam (central) stills.

<sup>5</sup>Special dies and tools (industry 3544) and metalworking machinery attachments (industry 3545) constituted industry 3543 in 1947. Comparable 1947 employment and value added for industries 3544 and 3545 combined are 95.9 thousand and \$501,995 thousand, respectively.

## Appendix C

### CENSUS REPORT FORMS AND PUNCH CARDS

Approximately 200 different report forms ("standard" forms) were used in collecting information in the 1954 Census of Manufactures. Nearly all of these were variations of Form MC-35U shown on pages App. C-2 thru 10 of this appendix. Such forms were sent to larger manufacturing plants (generally those with six or more employees). Items 1 through 16 are the same on nearly all such forms except for item 9, "Number of Employees by Months," which appears on report forms for a few industries characterized by marked seasonal variations in employment. Items 17 and 18, while similar in general purpose, are different for each industry or group of related industries depending upon the materials used or the products manufactured. Items 19 and 20 are similarly adapted to the special characteristics of individual industries.

Five simplified report forms ("short" forms) were used for smaller establishments, i.e., those with less than six employees. The General Manufactures Form MC-D2, shown on pages App. C-16 thru 19, was sent to small establishments in all but four industry areas: (a) Dairy Products, (b) Logs, Lumber and Other Wood Basic Materials, (c) Printing and Publishing, and (d) Concrete Products; for these groups special short forms were prepared. The general inquiries (items 1-10) included for forms used for the smaller establishments are the same and are considerably abridged in comparison with these items included in the stand-

ard forms sent to larger establishments. The product inquiry on Form MC-D2 requested the manufacturer to report value of shipments for classes of products as described in a Product Class Reference List which was enclosed with the form. Plants in the four selected industry areas, however, received forms with a preprinted list of individual products suitable to the industry. The need for such special forms arose after it was determined that product data for these areas were significantly affected by the output of smaller plants. A preprinted list of materials consumed was also included on the forms for certain of these special industries.

Instructions for preparing the 1954 Census report forms are also shown below except for Form MC-D2 and its four variations. Short form respondents were sent the Product Class Reference List described above with the other instructions appearing on the form itself.

Additional forms used to cover separate central administrative offices and auxiliary units, plants under construction but not in operation during 1954, plants using 20 million or more gallons of water during 1954, etc., are described in Section 9 of the introductory text which appears at the beginning of this Volume.

The basic punch cards used in tabulating the 1954 Census data are shown on pages App. C-20 and 21.

Form Approved: Budget Bureau No. 41-54167

FORM MC-35U									
CENSUS USE ONLY									
State	SM/SEA	County	City	City Size	T. E.	V. A.	Industry	C/O	Plant Spec 1
ITEM 1 NAME OF ESTABLISHMENT		Factory, plant, or mill covered by this report:							
ITEM 2 LOCATION OF ESTABLISHMENT		Give actual physical location of this establishment (which may differ from business mailing address). a. Street _____ and number _____ b. City, town, or village _____ c. County _____ d. State _____ e. Is this establishment within the actual legal boundaries of any city or town? _____ Yes <input type="checkbox"/> No <input type="checkbox"/> f. If "Yes," give official name of city or town. (If same as Item 2b, write "same.") _____							
ITEM 3 NATURE OF ACTIVITY		If "No," see enclosed instructions for Item 2. Describe briefly the kind of activity of this establishment:							
ITEM 4 FED. SOCIAL SECURITY EMPLOYER IDENTIFICATION NUMBER		a. Federal Social Security Employer Identification Number. (Enter number as reported on Form 941, Item 10, on latest employer's quarterly tax return under Federal Insurance Contributions Act) _____ b. Number of separate places of business operated under this Employer Identification Number. _____ One <input type="checkbox"/> Two or more <input type="checkbox"/>							

**CONFIDENTIAL**—This report should be returned **within 30 days of its receipt**. This report is required by Act of Congress (13 U. S. C. 131). Your report is confidential and only sworn Census employees will have access to it. It cannot be used for purposes of taxation, investigation or regulation.

(Please correct any errors in name and address)

PLEASE READ ENCLOSED INSTRUCTIONS BEFORE COMPLETING REPORT	
ITEM 5 COMPANY AFFILIATION	a. Is this company (identified by the number given in Item 4a) owned or controlled by another company? _____ Yes <input type="checkbox"/> No <input type="checkbox"/> b. If "Yes," give name and address of owning or controlling company: _____ c. Does this company (identified by the number given in Item 4a) own or control another company? _____ Yes <input type="checkbox"/> No <input type="checkbox"/> Check one: (1) <input type="checkbox"/> Individual proprietor (x) <input type="checkbox"/> Partnership (Specify number of working partners _____) (v) <input type="checkbox"/> Corporation (Do not include any form of cooperative association) (o) <input type="checkbox"/> Cooperative association (corporate or noncorporate producer-cooperatives and cooperative marketing associations) (o) <input type="checkbox"/> Other (Specify) _____
ITEM 6 FORM OF OWNERSHIP	Change in status since December 31, 1953 (Check one): a. <input type="checkbox"/> Owned and operated by you during all of 1954 b. * <input type="checkbox"/> Purchased by you on _____ (date) c. * <input type="checkbox"/> Sold by you on _____ (date) d. <input type="checkbox"/> Did not operate in 1954 (but still owned by you) e. * <input type="checkbox"/> Went out of business (no new owner) on _____ (date) Give name and address of former owner (if box "b" is checked) or purchaser (if box "c" is checked): _____
ITEM 7 CHANGE IN STATUS OR OWNERSHIP OF THIS ESTABLISHMENT SINCE DECEMBER 31, 1953	*Complete report for part of 1954 you operated this plant.

ITEM 8 EMPLOYMENT AND PAYROLLS IN 1954		Class of employee	Number of employees in 1954					Total 1954 payroll (wages, salaries, bonuses, commis- sions, and other remunerations paid in entire year, before deductions) (omit cents)
Pay period ended nearest 15th of—					Average employment (D) (omit cents) (sums by 4)			
March (A)	May (B)		August (C)	November (D)		Sum of Cols. (A) through (D) (E)		
a. Production and related workers	Workers (up through the working foreman level) engaged in fabricating, processing, assembling, inspection, receiving, storage, handling, packing, warehousing, shipping (but not delivering), maintenance, repair, janitorial, watchman services, product development, auxiliary production for plant's own use (e. g., power plant), record keeping, and other services closely associated with these production operations. Exclude supervisory employees above working foreman level.						A1, B1 (F)	A2 (G)
b. Force- account construction workers	Employees on your payroll who are engaged in construction of major additions or alterations to the plant and are utilized as a separate work force. (Workers engaged in regular maintenance and repair operations should be reported in Item 8a, not here).						B2	\$
c. All other employees	Nonproduction personnel of this establishment, including those engaged in the following activities: factory supervision above working foreman level, sales (including driver salesmen), sales delivery (highway truck drivers and their helpers), advertising, credit, collection, installation and servicing of own products, clerical and routine office functions, executive, purchasing, finance, legal, personnel (including cafeteria, medical, etc.), professional, and technical.						B3	\$
d. TOTAL FOR THIS ESTABLISHMENT (Sum of a, b, and c)-----							A3, B4 ↑	A4 ↑
ITEM 9 (Not applicable to this industry)								\$
ITEM 10 MAN-HOURS OF PRODUCTION AND RELATED WORKERS, BY QUARTER		Enter the total number of plant man-hours of production and related workers (as defined in Item 8a) for each calendar quarter (or comparable 13 week period) of 1954. Do not include hours paid for vacations, holidays or sick leave.	1954 Quarterly period—				Man-hours (omit fractions)	Census Use Only
B5 ↑			B6 ↑	B7 ↑	B8 ↑			
January through March.....			A6, C1, G1					
April through June.....			A7, G2					
July through September.....			A8, G3					
October through December.....		A9			TOTAL, 1954.....		A5	
ITEM 11 SUMMARY OF MATERIALS, FUELS, AND ELECTRIC ENERGY; CONTRACT WORK; AND COST OF RESALES DURING 1954		On lines a and c, report the cost of all items actually consumed or put into production in 1954, whether purchased, withdrawn from inventories, or received from other establishments of this company. If your records do not show actual amounts consumed, this may be computed by adding purchases (or receipts) during the year to opening inventory and subtracting closing inventory. Purchase records instead of consumption records may be used for any major material, if purchases closely approximate consumption, and for all minor materials and supply items.  "Cost" refers to amounts actually paid or payable after discounts, and includes freight and other direct charges incurred in acquiring the items. For materials, parts, etc. transferred from other establishments of this company, report the nearest approximation to their commercial cost value.	Item		Cost (omit cents)			
a. Materials, parts, containers, and supplies consumed during 1954. Include consumption of all raw materials, parts and components, containers, and supplies. (Should be the same as total of Item 17)....			C2		\$			
b. Cost of products bought and resold without further manufacture, processing, or assembly in this establishment during 1954.....					\$			
c. Fuels consumed during 1954 (Should be the same as Item 12a, 6).....					\$			
d. Electric energy purchased during 1954 (Should be the same as Item 12b, 1).....					\$			
e. Cost of work done for you by others on your own materials during 1954 (contract work).....					\$			
f. TOTAL (Sum of a, b, c, d, and e).....				\$				

ITEM 12 FUELS AND ELECTRIC ENERGY	Item (A)	Code	Unit of measure (B)	Quantity (C)	Cost (omit cents) (D)
Report quantities in units specified; report total delivered cost, not cost per unit. Check the kinds of fuel used:					
1. Coal: (11) <input type="checkbox"/> Bituminous or lignite (12) <input type="checkbox"/> Pennsylvania anthracite.					
2. Coke.....					
3. Fuel oil: (31) <input type="checkbox"/> Distillate (light) (32) <input type="checkbox"/> Residual (heavy).....					
4. Gas: (41) <input type="checkbox"/> Natural (42) <input type="checkbox"/> Manufactured or mixed.....					
5. Other fuels: <input type="checkbox"/> Gasoline <input type="checkbox"/> Liquefied petroleum gas <input type="checkbox"/> Wood <input type="checkbox"/> Other.....					
6. TOTAL (Sum of lines 1 through 5; should be the same as Item 11c).....					
b. Electric energy during 1954	1. Purchased (Should be the same as Item 11d. *Exclude energy purchased for resale). 2. Generated (gross, less generating-station use) 3. Sold (in "Cost" column, report value of electric energy sold)				
G4	a. Total quantity of water intake in this estab- lishment during entire year 1954 (Check one):				
(1) <input type="checkbox"/> 20 million gallons (2) <input type="checkbox"/> 10 to 20 million (3) <input type="checkbox"/> 1 to 10 million (4) <input type="checkbox"/> Less than 1 million or more per year gallons per year gallons per year gallons per year					
ITEM 13 INDUSTRIAL WATER USE DURING 1954	b. Kind of water used (Check one): (1) <input type="checkbox"/> Fresh water (2) <input type="checkbox"/> Brackish (salt) water from the ocean, ponds, or wells (3) <input type="checkbox"/> Both				
c. Check principal source (1) <input type="checkbox"/> Public water systems (municipally or privately owned) (2) <input type="checkbox"/> Company surface water systems, such as streams or lakes (3) <input type="checkbox"/> Company ground water systems, such as wells or deep springs					
ITEM 14 HORSEPOWER RATING OF POWER EQUIPMENT, AT END OF 1954	The figures should represent total horsepower rating of equipment in use or available for use at end of 1954. Report the horsepower rating indicated on name plates.		Value of inventories		
Kind of power equipment		Total horsepower rating (At end of year)	Kind of inventory	Beginning of 1954 (omit cents) (A)	End of 1954 (omit cents) (B)
a. Internal combustion engines, steam engines and turbines, and other prime movers, except for highway-type equipment:		E6	a. Inventories of finished products.....	F1	F5
1. Driving generators.....		hp.	b. Inventories of work-in-process.....		\$
2. Not driving generators.....		hp.	c. Inventories of materials, supplies, fuel, etc.		\$
b. Electric motors (one horsepower and over).....		hp.	d. TOTAL INVENTORIES (Sum of a, b, and c).....		\$
ITEM 16 CAPITAL EXPENDITURES FOR THIS ESTABLISHMENT DURING 1954 (Exclude expenditures for land)	Expenditures refer to all costs actually incurred during 1954 which are chargeable to the fixed assets accounts of this establishment and which are of the type for which depreciation accounts are ordinarily maintained. Do not include cost of maintenance and repairs charged as current operating expense. During 1954, did you make any expenditures for this establishment of the kind described above? (Check one) <input type="checkbox"/> Yes <input type="checkbox"/> No If "Yes," supply figures:				
Type of capital expenditures (excluding land)			Expenditures (omit cents)		
a. New structures and additions to plant (including major alterations, capitalised repairs and improvements).....			G5		
b. New machinery and new equipment (including capitalised repairs and improvements).....			\$		
c. Expenditures for used plant and used equipment acquired from others.....			\$		
d. TOTAL CAPITAL EXPENDITURES (Sum of a, b, and c).....			\$		

## ITEM 17

SELECTED  
MATERIALS  
CONSUMED  
DURING  
1954

**General.**—This inquiry calls for a breakdown of the cost of all materials and components, parts, containers, and supplies consumed during 1954, as reported in Item 11a, on reverse. Separate figures are required for each material listed below if your consumption of the material during 1954 amounted to \$5,000 or more. The cost of materials, supplies, etc., which are not listed or, if listed, are not reported separately because their value is estimated at less than \$5,000, should be reported on the line for "All other materials and components, parts, containers, and supplies consumed." The total cost in Item 17 should, therefore, agree with Item 11a.

**Consumption of Materials Received From Other Establishments (Col. (D) and Col. (E)).**—Report in these columns the quantities and delivered cost of each of the listed materials actually consumed or put into production during the year, whether purchased, withdrawn from inventories, or received from other establishments of this company.

**Quantity (Col. (D)).**—Report the quantities actually consumed in the unit of measure specified. If you do not maintain actual consumption records, but if purchases closely approximate consumption, your purchase figures may be used in completing the item. However, if for one of the items specifically listed, consumption differs significantly from purchases, please derive consumption figures by adding beginning inventory to

purchases during the year and then subtracting closing inventory. Purchase data may be reported for minor materials and supply items.

**Delivered Cost (Col. (E)).**—Report amounts actually paid or payable after discounts, and include freight and direct charges incurred in acquiring the quantities of the listed materials consumed during 1954. For materials transferred from other establishments of this company, report the nearest approximation to the commercial value of the material.

**Consumption of Materials Produced in This Establishment (Quantity) (Col. (F)).**—Report the quantities of each listed material which were made and consumed in further fabrication or assembly within the same establishment.

**Derived Unit Cost (Col. (E) Divided by Col. (D)).**—This computation is included as an aid to you and the Census Bureau in assuring that this part of your report has been filled out correctly. Please examine the derived unit costs to make sure that the correct unit of measure (Column (C)) has been used and that the quantities and costs entered are consistent. **All Other Materials and Components, Etc. (Line 10).**—This figure may be derived by subtracting the sum of the material costs on lines 1-9 from the total cost of all materials, parts, containers, and supplies consumed during 1954, as reported in Item 11a.

Material (A)	Line No. (B)	Unit of measure (C)	Consumption of materials received from other establishments		Consumption of materials produced in this establishment (quantity) (F)	Derived unit cost (Col. (E) divided by Col. (D))
			Quantity (D)	Delivered cost (omit cents) (E)

ITEM 18  
PRODUCTS  
AND  
SERVICES  
OF THIS  
ESTABLISH-  
MENT  
DURING  
1954

*Report separately each product listed; do not combine product lines.*

**Production for All Purposes (Col. (C)).**—Report in this column the total amount of each specified product made in this establishment during 1954, whether sold, transferred, added to inventory, or used in further processing.

**Total Shipments and Interplant Transfers (Col. (D) and Col. (E)).**—Report in these columns the quantity and selling value f. o. b. plant of all products made in this establishment which were physically shipped from this establishment during 1954. Include products shipped on con- signment, whether or not sold at the end of the year. Deduct returned goods.

For value of shipments, report the net selling value f. o. b. plant of your total shipments of each product listed. The reported figures should represent values f. o. b. plant after discounts and allowances and should not include freight charges or excise taxes.

Include products transferred to other establishments of your company (such as other manufacturing plants or separate sales branches). Their "value" should be the nearest approximation to the commercial selling value f. o. b. plant and not the cost of production.

Derived Unit Value (Col. (E) Divided by Col. (D)).—This computation is included as an aid to you and the Census Bureau in assuring that this part of your report has been filled out correctly. Please examine the derived unit values to make sure that the correct unit of measure (Column (B)) has been used and that the quantities and values entered are consistent.

Resales (Line 21).—Report on this line the invoice sales value of products sold in the same condition as purchased, and which are not made part of any products included under "Products Made in This Establishment." (The cost of such resold goods should be reported in Item 11b.)

## DEPARTMENT OF COMMERCE

## BUREAU OF THE CENSUS

## 1954 CENSUS OF MANUFACTURES

GENERAL INSTRUCTIONS TO MANUFACTURERS  
FOR PREPARING REPORTS

## INTRODUCTION

## A. WHO SHOULD REPORT?

Every concern which receives a form is required to submit a separate census report for each of its manufacturing establishments in the Continental United States, Alaska, and Hawaii. Concerns with more than one

establishment must submit a separate report for each establishment operated during 1954. Your report should be returned to the Census Office shown on the enclosed envelope *within 30 days of its receipt*.

## B. WHAT IS A MANUFACTURING ESTABLISHMENT?

A manufacturing establishment is generally defined as a single physical location where industrial operations are performed; for example, a factory, mill, or plant. Where a single physical location comprises two or more units which are engaged in distinct or separate manufacturing activities, and for which separate records are available or for which substantially accurate reports can be prepared, each such unit shall be treated as a separate establishment. In the preparation of such reports a limited amount of prorating or estimating may be necessary. An establishment is not necessarily identical with the business concern or firm which may consist of one or more establishments. It is also to be distinguished from organizational subunits, departments or divisions within an establishment. Units at different physical locations, even though engaged in the same line of manufacturing,

processing, and assembly, should be reported as separate establishments.

Where agreements were reached by your company with the Bureau of the Census concerning the definition of your manufacturing plants for reporting in the 1947 Census of Manufactures or subsequent Annual Surveys of Manufactures, the same definitions should be used in this Census. (However, it is necessary to prepare a separate report for *each* enclosed manufactures form imprinted with a specific plant name and address.)

If additional report forms are required, please write the Bureau of the Census, indicating the type of activity which is not covered by the form(s) sent you. (NOTE.—If you received a copy of Form NC-X2, use it to request such additional forms.)

## C. WHAT KIND OF ACTIVITIES SHOULD THE ESTABLISHMENT REPORTS COVER?

Each report should cover all the production activities (manufacturing, fabricating, processing, and assembling) *conducted within the establishment*. It should also include activities such as the generation of power for the plant, maintenance of plant and equipment, receiving, shipping, warehousing, storage, research, record keeping, health, safety, cafeteria, and other services, *when carried on at the same physical location by the manufacturing*

*establishment*. Your report should *exclude* sales branches, sales offices, power plants, research laboratories, retail stores, and general administrative offices, *if they are operated as separate establishments*. Separate Census reports should be submitted for each of these establishments. Business concerns operating more than one establishment should refer to the instructions defining an establishment on the company summary form NC-X7.

## D. WHAT PERIOD SHOULD EACH REPORT COVER?

Each report should cover the calendar year 1954. If your book records are not on a calendar year basis, carefully prepared estimates for this period will be accepted. If, however, this procedure will involve you in considerable additional costs, and agreements were reached by your company with the Census Bureau in regard to reporting on a fiscal year basis in the 1947 Census or subsequent Annual Surveys of Manufactures, you may report on a fiscal basis. As in the 1947 Census and in the Annual Surveys of Manufactures, however, all employment,

payroll, and man-hour figures should relate to the *calendar* year rather than the fiscal year.

The dates given in the certification should show the exact period for which this report is made. Thus, if an establishment began to operate or ceased to operate within the year, the dates given will show that only part of a year is covered by the report. Where an establishment was operated during the early part of the year under other management, complete the report only for that part of the year 1954 in which you operated.

### E. HOW SHOULD MULTIPLE ESTABLISHMENT COMPANIES DETERMINE TRANSFER VALUES FOR INDIVIDUAL PRODUCTS AND MATERIALS?

In order to provide accurate information for individual industries, States, and local areas, it is necessary for each establishment of a multiple plant organization to report as though it were operated as an independent manufacturing establishment. For example, where a single company operates a textile mill and also manufactures apparel, the transfer of fabrics from one establishment to the other should be reported at *approximately commercial value* and *not* at the cost of production. This requires that a company operating two or more plants assign to each plant and to the individual products a reasonable proportion of the profits and the overhead costs. The method found by each company to be most convenient will ordinarily be acceptable to the Census Bureau. It is recognized that estimates will often be involved.

If the product section of the form (item 18) calls for "interplant transfers" separately, it means transfers between *manufacturing* plants of your company. Interplant transfers should *not* include transfers to separate selling departments, sales branches, retail stores, export subsidiaries or other distribution channels owned by your company. The products reported at "transfer values" by the shipping plant should be reported by the receiving plant as materials consumed (or inventories of materials, etc.) at the same values, except for the addition of freight and other direct handling charges.

These instructions apply to all establishments for which separate reports are being submitted, including those at the same location as well as those at different locations.

### ITEMS ON THE REPORT FORM

(NOTE.—An entry is required in each item on the form. If the answer is none, enter "none" or "0." If a particular question does not apply to your business, enter "not applicable" or explain briefly in the "Remarks" space.)

**Item 1. Name of Establishment (Factory, Plant, or Mill).**—Enter the name under which the establishment covered by this report does business. If it is one of several establishments doing business under the same name, also give the name or number by which it is distinguished from the other establishments of the same company. For example: "Atlas Steel Co., Centerville Plant." If it is one of several establishments at the same address, it is important that you indicate type of activity; for example, "Acme Textile Co., Third Street Mill Finishing Department."

**Item 2. Location of Establishment.**—Enter the *actual physical location* of your factory, plant, or mill (which may differ from the business address at which mail is received) in Items 2a through 2d. If the establishment is located *within the actual legal boundaries* of any city or town, check "YES" in item 2e and give the *official name* of the city or town in item 2f. (This name is *not necessarily* the same as the post office station name used for the mailing address of the establishment.)

If the establishment is *not* located within the *actual legal boundaries* of any city or town, check "NO" in item 2e and enter in item 2f the name of the township, borough, or similar civil subdivision of the county in which located. If the latter is not known, however, enter in item 2f the rural route or highway upon which the establishment is located and its distance and direction from the nearest city or town (for example, "State Highway No. 26, 10 miles northeast of York"). In the case of mobile operations such as logging or pulpwood operations, give the county in which the *major* activity was carried on.

**Item 3.** (See instructions on Form.)

**Item 4.** (See instructions on Form.)

**Item 5.** (See instructions on Form.)

**Item 6.** (See instructions on Form.)

**Item 7. Change in Status or Ownership of This Establishment Since December 31, 1953.**—If box "d" or box "e" is checked, the following additional information should be supplied in the "Remarks" section. If plant did not operate at any time in 1954 (box "d" has been checked), advise date operation is expected to resume. If "out of business" (box "e" has been checked), state the disposition of the plant, i. e., unoccupied, demolished, dismantled, etc.

**Item 8. Employment and Pay Rolls in 1954. Number of Employees in 1954.**

**Columns (A) through (D).**—Report employees at this establishment who worked or received pay for any part of the pay period (preferably 1 week) ended nearest the 15th of the months specified on the report form. *Include* all persons on paid sick leave, paid holidays, and paid vacation during these pay periods; *exclude* members of armed forces and pensioners carried on your active rolls. *Include* officers, if a corporation; *exclude* proprietor or partners, if an unincorporated concern. (You may follow the definition of employees specified by your State Employment Security Agency.) If employment in any one of these pay periods was abnormally low because of a strike or for some other reason, state the reason therefor and report employment for the nearest normal pay period in the "Remarks" section of the form.

**Columns (E) and (F).**—Add the four employment figures on each line and enter total in column (E); divide this total by FOUR and enter result in column (F), "Average Employment."

Classes of employees on lines 8a, 8b, and 8c are defined as follows:

**a. Production and related workers.**—Workers (up through the working foreman level) engaged in fabricating, processing, assembling, inspection, receiving, storage, handling, packing, warehousing, shipping (but not delivering), maintenance, repair, janitorial, watchman services, product development, auxiliary production for plant's own use (e. g., power plant), record keeping, and other services closely associated with these production opera-

tions. *Exclude* supervisory employees above working foreman level.

*b. Force-account construction workers.*—Employees on your payroll who are engaged in construction of major additions or alterations to the plant and are utilized as a separate work force. (Workers engaged in regular maintenance and repair operations should be reported in item 8a, not here.)

*c. All other employees.*—Nonproduction personnel of this establishment, including those engaged in the following activities: factory supervision above working foreman level, sales (including driver salesmen), sales delivery (highway truck drivers and their helpers), advertising, credit, collection, installation and servicing of own products, clerical and routine office functions, executive, purchasing, finance, legal, personnel (including cafeteria, medical, etc.), professional, and technical.

**Column (G)—Total 1954 Payrolls**—(*Total Wages, Salaries, Bonuses, Commissions, and Other Remuneration Paid in Entire Year 1954, Before Deductions.*)—Report the gross earnings paid in the calendar year 1954 to employees on the payroll of this establishment during 1954, including commissions, dismissal pay, all bonuses, vacation and sick leave pay, and compensation in kind, and prior to such deductions as employees' Social Security contributions, withholding taxes, group insurance, union dues, and savings bonds. *Include* salaries of officers at this establishment, if a corporation; *exclude* payments to proprietor or partners, if an unincorporated concern. *Exclude* payments to members of armed forces and pensioners carried on your active payroll. (You may fol-

low the definition of salaries and wages that is used for calculating the withholding tax.)

**Item 9. Total Number of Employees, by Month.**—*This inquiry will appear on the report forms only for selected industries where there is a significant seasonal pattern, or where an accurate annual employment average cannot be obtained from figures for four specified pay periods (i. e., where a significant difference exists between an employment average based on 4 monthly figures and an average based on 12 monthly figures).*

**Item 10. Man-Hours of Production and Related Workers, by Quarter.**—"Plant man-hours" of production and related workers (as defined in Item 8a) is designed to measure the over-all activity of the plant during each quarter. The requested figures consist of all man-hours worked or paid for, except hours paid for vacations, holidays or sick leave, when the employee was *not* at the plant. *Include* actual overtime hours, not straight-time equivalent hours. If employee elects to work during the vacation period, report only actual hours worked by such employee.

Each quarterly man-hours figure should be a total for the entire quarterly period (either calendar quarter or 13-week period). The "Total 1954" figure should account for *all* man-hours at the plant of production and related workers only for the entire year. Do *not* include man-hours for "force-account construction workers" or for "all other employees." If a payroll period runs from one quarter into the next, distribute the man-hours between the two quarters.

## SPECIAL INSTRUCTIONS FOR ITEMS 11, 12, AND 17

**What To Include in These Items.**—Report total amounts of materials, supplies, semi-finished goods, fuels, etc., actually consumed or put into production during 1954 by your establishment. *This should include only physical goods and not services used or overhead.* Therefore, *exclude* such services as advertising, telephone, telegram and cable, insurance, developmental and research services provided by other establishments, services of engineering, management, marketing and other professional consultants, etc. *Exclude*, in addition, such overhead items as depreciation charges against plant and equipment, rent and rental allowances, interest payments, and royalties and use of patents fees.

In addition to items purchased from other companies, you should be sure to include materials, supplies, fuels, etc., received from other establishments of your company. The figures reported in Items 11a, 11c, 11d, 12, and 17 should cover materials, fuels, etc., which were: (1) put into production, (2) used as operating supplies, (3) used in repair and maintenance, and (4) owned by you but consumed by other companies to make products for your establishment. Products purchased and resold without further manufacture or processing should be included in Item 11b *only*. *Exclude* materials, supplies, machinery, and equipment which were used in the construction of new structures or additions to your plant or new machinery

and equipment, and which are chargeable to fixed assets accounts.

**Definition of Consumption.**—Include items received prior to 1954 if they were consumed during the year, but do not include items received in 1954 if they were not consumed. If your records do not show actual amounts consumed or put into production during the year, but purchases closely approximate consumption, purchase figures may be used in completing Items 11, 12, and 17. This applies especially to minor materials and supply items. If for any major item, however, consumption differs significantly from purchases, consumption should be computed from your records of purchases (receipts) and inventories of materials as follows: Add amounts received during the year to amounts on hand at the beginning of the year and from this total subtract amounts on hand at the end of the year. The resulting figure represents consumption during the year.

**Definition of Cost.**—"Cost" refers to direct charges actually paid or payable for items consumed or put into production during the year. For this reason, it should represent the cost after discounts, and should include freight charges and other direct charges incurred by the establishment in acquiring these materials.

The cost reported for materials, etc., received from other plants of your company or from a central materials

depot (whether at the same or different physical locations) should approximate the commercial values of these materials plus freight and other direct handling charges. Wherever possible, these figures should be checked with the values reported by the plant producing and transferring the goods and should exceed the shipment values reported for the producing plant only by the addition of freight or other direct handling charges involved.

**Item 11a. Materials, Parts, Containers, and Supplies Consumed During 1954.**—Report the total delivered cost of all raw materials, semi-finished goods, parts, components, containers, scrap, and supplies consumed or put into production during 1954 by this establishment. For semi-finished goods, parts, or components produced and later incorporated into finished products at the same plant, include the cost of raw materials used in their manufacture rather than the value of the intermediate products made.

Be sure to include the cost of all materials listed in Item 17 (if applicable) or listed as examples in Item 11a. In addition, include the cost of all parts, containers, and supplies shown in the list of examples below. Be sure to include the cost of any such listed items and *all other materials, parts, etc.*, actually consumed or put into production at this establishment in 1954. This list is shown only as an example rather than as a complete list of types of items which should be included.

#### Parts

Pumps.	Engines.
Wheels.	Gears.
Bearings.	Hardware.

#### Supplies

Bolts, screws, and nuts.  
Drills, tools, dies, jigs, and fixtures which are charged to current expense accounts.  
Welding rods, electrodes, and acetylene.  
Lubricating oils.  
Paint and varnish.  
Findings.  
Soap and cleaning supplies.  
Stationery, stamps, and office supplies.  
First aid and safety supplies.  
Dunnage.  
Purchased water or steam.

#### Containers

Pails.	Boxes and bags.
Drums and barrels.	Crates.
Tubes.	

**Item 11b. Cost of Products Bought and Resold Without Further Manufacture, Processing or Assembly in This Establishment During 1954.**—Give the cost of all products bought and resold in the same condition as when purchased and not made part of another product manufactured by this establishment. (Total invoice sales value of all products thus resold is to be reported in Item 18 on the line for "Resales.")

**Item 11c. Fuels Consumed During 1954.**—Report the total amount actually paid or payable during 1954 for all fuels consumed for heat, power, or the generation of electricity. Include anthracite and bituminous coal, coke, natural and manufactured gas, fuel oil, liquefied petroleum gas, purchased steam, and all other fuels.

**Item 11d. Electric Energy Purchased During 1954.**—Report the total amount actually paid or payable for electric energy purchased during 1954.

**Item 11e. Cost of Work Done for You by Others on Your Own Materials During 1954. (Contract Work.)**—If any work was done by others on materials furnished by your establishment, report the total 1954 payments made for such work, including freight out and in. *Exclude* the cost of materials worked on, which should be included in Item 11a (and in Item 17 if the latter appears on the report form).

**Item 12a. Fuels Consumed During 1954.**—(*This item is omitted from the report forms for establishments in selected Apparel and Printing and Publishing industries.*) Do not include fuels that were produced and used at this establishment for power or heat, for example, coke at coke ovens or fuel oil at petroleum refineries. Include in Item 17, fuel used as raw materials, for example, crude petroleum, coal used in making coke, and gas used in making carbon black.

**Item 12a, 3. Fuel Oil.**—Under "Distillate (light)" fuel oil include Grade Nos. 1 through 4 and P. S. 100 and 200. Under "Residual (heavy)" fuel oil include Grade Nos. 5 and 6 and P. S. 300 and 400. If nearly all of the fuel oil used was of one type, check only the principal type.

**Item 12b. Electric Energy During 1954.**—(*Establishments in selected Apparel and Printing and Publishing industries will be required to report in this item only the number of kilowatt hours of electric energy purchased, (the cost of this energy being reported in Item 11d.)*)

#### SPECIAL INSTRUCTIONS FOR CENTRAL POWERPLANTS SERVING TWO OR MORE ESTABLISHMENTS

If a central power plant is identified as a separate establishment for Census reporting purposes, it should be reported on the "Administrative Office and Auxiliary Establishments" Form NC-X6 and the supplemental power plant form, MC-D10. If such a separate report is made for the power plant, the reports for the manufacturing establishments should show all electric energy used under "Purchased" (including electric energy furnished by the central power plant).

If the central power plant is not reported as a separate

unit, all electric energy generated by this power plant should be shown on the report for the establishment to which the power plant is attached, or to which it furnishes the greater quantity of electric energy. All electric energy generated but not used at this manufacturing establishment (including transfers to other establishments of the same company) should be reported as electric energy sold. Such electric energy used by other establishments of your company should be shown in their reports as purchased electric energy.

**Item 13. Industrial Water Use During 1954.**—(See instructions on form.) *A selected group of establishments, consisting mainly of those consuming large quantities of water, will be required to supply the following additional detail on water consumed during 1954: total intake during the year distributed by type of use; quantity discharged; quantity recirculated; and quantity treated.*

**Item 14. Horsepower Rating of Power Equipment at End of 1954.**—Include all engines and turbines, such as internal combustion engines (Diesel, gas, gasoline, etc.), steam engines and turbines, hydroturbines, water wheels, and other prime movers. Include both owned and rented equipment for use at this establishment.

Report internal combustion engines and electric motors (1 hp. and over) in use, or available for use, at the plant, including those driving machinery, such as machine tools, compressors, presses, bottling machines, saws, hoists, etc. Include emergency or standby equipment and equipment temporarily idle because in need of repairs; exclude only junk. Both stationary and mobile equipment, except highway-type vehicles, should be included.

In reporting prime movers for electric generators, if the equipment is rated only on the generator, compute the horsepower rating (hp.) of the prime mover by multiplying the kilowatt rating (kw.) by 1.34. If more than one rating is shown on the name plate for an internal combustion engine, report the brake horsepower if available.

**Item 15. Inventories of This Establishment.**—(*This item is omitted from the report forms for the Printing and Publishing industries.*)

Where a company operates more than one establishment (i. e., plant, sales branch, retail stores, etc.) the inventories held by each establishment should be included in the establishment's Census report. The balance of the inventories owned by the company but not included in any of the establishment reports (for example, inventories in transit, in separate company or public warehouses, etc.) should be included in the "Administrative Office and Auxiliary Establishments" Form NC-X6. *Inventories should be reported at approximate current costs, if feasible; otherwise at book values.*

**Item 16. Capital Expenditures for This Establishment During 1954 (Exclude expenditures for land).**—Capital

expenditures cover: New structures and additions (including major alterations, capitalized repairs and improvements) to your plant (whether on contract or by your own forces); new machinery and new equipment; capitalized repairs and improvements to your existing machinery and equipment; and "used" plant and equipment acquired from others. Such expenditures during 1954 may be determined by the following computation: Additions completed during the year, *plus* construction-in-progress at the end of the year, *minus* construction-in-progress at the beginning of the year.

**Item 16a. New Structures and Additions to Plant.**—Report total expenditures during 1954 for new construction, major alterations, capitalized repairs, and improvements of buildings (including all new elevators, cranes, heating and ventilating equipment, essentially a part of the buildings), other fixed structures (such as blast furnaces, brick kilns, fractionating towers, shipways, and similar types of structures), and site improvements (such as roads, docks, tracks, parking lots, fences, utilities, etc.).

**Item 16b. New Machinery and New Equipment.**—Report total expenditures at this establishment for new production machinery and equipment and other new machinery and equipment. Include new machinery and equipment purchased for replacement purposes, as well as for additions to capacity. Include the value of improvements and capitalized repairs to machinery and equipment. Include all new motors, lathes, punch presses and similar machinery and equipment for use in production, as well as all new office machines and fixtures, furniture, cafeteria and dressing room furnishings, automobiles and trucks and other similar equipment.

**Item 16c. Expenditures for Used Plant and Used Equipment Acquired From Others.**—Report total expenditures at this establishment for old or existing plant and for second-hand equipment acquired from others (including the U. S. Government).

**Items 17, 18, 19, and 20.**—(See instructions on form. For Item 17, also see "Special Instructions for Items 11, 12, and 17" above.)

Form <b>D2</b> MC	U. S. DEPARTMENT OF COMMERCE—BUREAU OF THE CENSUS  <b>1954 CENSUS OF MANUFACTURES</b>  <b>GENERAL MANUFACTURES FORM</b>  <b>FORM MC-D2</b>									
CONFIDENTIAL—This report should be returned <b>within 30 days</b> of its receipt. This report is required by Act of Congress (13 U. S. C. 131). Your report is confidential and only sworn Census employees will have access to it. It cannot be used for purposes of taxation, investigation or regulation.										
(Please correct any errors in name and address)										
<b>FOR CENSUS USE ONLY</b>										
State	SMA SEA	County	City	City size	T. E. V. A.	Industry	C/O	Plant Spec'l		
<b>ITEM 1</b> NAME OF ESTABLISHMENT  Factory, plant, or mill covered by this report:										
<b>ITEM 2</b> LOCATION OF ESTABLISHMENT  Give <b>actual physical location</b> of this establishment (which may differ from business mailing address).										
a. Street and Number _____ b. City, town, or village _____ c. County _____ d. State _____ e. Is this establishment <b>within the actual legal boundaries of any city or town?</b> ..... <input type="checkbox"/> Yes <input type="checkbox"/> No f. If "Yes," give <b>official</b> name of city or town (If same as Item 2-b, write "same").										
If "No," enter in Item 2f the name of township, borough, or similar civil subdivision of county in which located. If latter is not known, enter rural route or highway upon which located; give <b>distance</b> and <b>direction</b> from nearest city or town.										
<b>ITEM 3</b> FED. SOCIAL SECURITY EMPLOYER IDENTIFICATION NUMBER  a. <b>Federal Social Security Employer Identification Number.</b> (Enter number as reported on Form 941, Item 10, on latest employer's quarterly tax return under Federal Insurance Contributions Act) ..... b. Number of separate places of business operated under this Employer Identification Number..... <input type="checkbox"/> One <input type="checkbox"/> Two or more.										

<b>ITEM 4</b> <b>COMPANY AFFILIATION</b> a. ## Appendix D

### PROVISIONS OF LAW RELATING TO 1954 CENSUS OF MANUFACTURES

(From Title 13 United States Code)

SECTION 131. The Secretary shall take, compile, and publish censuses of manufactures, of mineral industries, and of other businesses, including the distributive trades, service establishments, and transportation (exclusive of means of transportation for which statistics are required by law to be filed with, and are compiled and published by, a designated regulatory body), in the year 1954 and every fifth year thereafter, and each such census shall relate to the year immediately preceding the taking thereof: Provided, That the censuses of manufactures, of mineral industries, and of other businesses, including the distributive trades and service establishments, directed to be taken in the year 1954 relating to the year 1953, shall be taken instead in the year 1955 relating to year 1954. The censuses provided for in this section shall include the United States and its Territories and such Possessions as the Secretary may determine.

SECTION 224. Whoever, being the owner, official, agent, person in charge, or assistant to the person in charge, of any company, business, institution, establishment, religious body, or organization of any nature whatsoever, neglects or refuses, when requested by the Secretary or other authorized officer or employee of the Department of Commerce or bureau or agency thereof, whether such request be made by registered mail, by telegraph, by visiting representative, or by one or more of these methods, to answer completely and correctly to the best of his knowledge

all questions relating to his company, business, institution, establishment, religious body, or other organization, or to records or statistics in his official custody, contained on any census or other schedule prepared and submitted to him under the authority of this title, shall be fined not more than \$500 or imprisoned not more than sixty days, or both; and if he willfully gives a false answer to any such question, he shall be fined not more than \$10,000 or imprisoned not more than one year, or both.

SECTION 9. (a) Neither the Secretary, nor any other officer or employee of the Department of Commerce or bureau or agency thereof, may . . .

(1) use the information furnished under the provisions of this title for any purpose other than the statistical purposes for which it is supplied; or

(2) make any publication whereby the data furnished by any particular establishment or individual under this title can be identified; or

(3) permit anyone other than the sworn officers and employees of the Department or bureau or agency thereof to examine the individual reports.

App. D-1

# Appendix E

## Alphabetic Index of Manufactured Products

This index is designed primarily to assist the user in finding the numeric code for manufactured products and locating data for specific products in Table 6A "Quantity and Value of Products Shipped." Included in this index are approximately 7,000 individual product lines listed on the 1954 Census of Manufactures report forms as well as alternate descriptions of some of these lines and listings of items included in "all other" categories. Accordingly, data do not appear for every alphabetic entry in this index; conversely, Table 6A may contain greater detail by size, type of material, etc., than is shown in this index for particular items. Where a product line appears in more than one Table 6A, the page numbers are shown for each Table 6A.

Census code classifications are based on the Standard Industrial Classification Manual issued by the Bureau of the Budget; the Census expansion of 4-digit classifications to 5 and 7 digits is shown in Table 6A.

# List of Corrections

This volume has been prepared primarily by assembling and binding the statistical portions of previously issued Industry Bulletins. This publication plan was adopted to reduce publication costs and expedite

the issuance of the volume. The corrections appearing below represent changes which would ordinarily have been made if the volume had been prepared by reprinting the contents of the bulletins.

Page no.	Table	Code	Item	Columns	Change	
					From--	To--
20A-12	6A	2011511	Lard, rendered and refined (including rendered pork fat).....	2, 4, 8, and 12	21,647,627	2,164,762
